1. General Information.

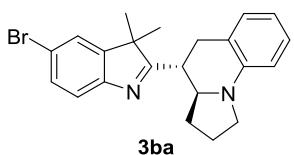

All reagents and chemicals (AR grade) were purchased from commercial suppliers and used without further purification unless otherwise noticed. Indolenines¹ and *o*-amino-substituted benzaldehydes² were prepared according to literature procedures. Column chromatography was performed on silica gel (100~200 mesh). All ¹H NMR and ¹⁹F NMR spectra were recorded on a Bruker Avance II 400 MHz and Bruker Avance III 470 MHz, respectively. ¹³C NMR spectra were recorded on a Bruker Avance II 101 MHz with chemical shifts reported as ppm (in CDCl₃, TMS as internal standard). Data for ¹H NMR are recorded as follows: chemical shift (δ , ppm), multiplicity (s = singlet, d = doublet, t = triplet, m = multiplet, dd = double doublet, dt = double triplet, td = triple doublet, coupling constants in Hz, integration). HRMS (ESI) was obtained with an HRMS/MS instrument (LTQ Orbitrap XL TM).
