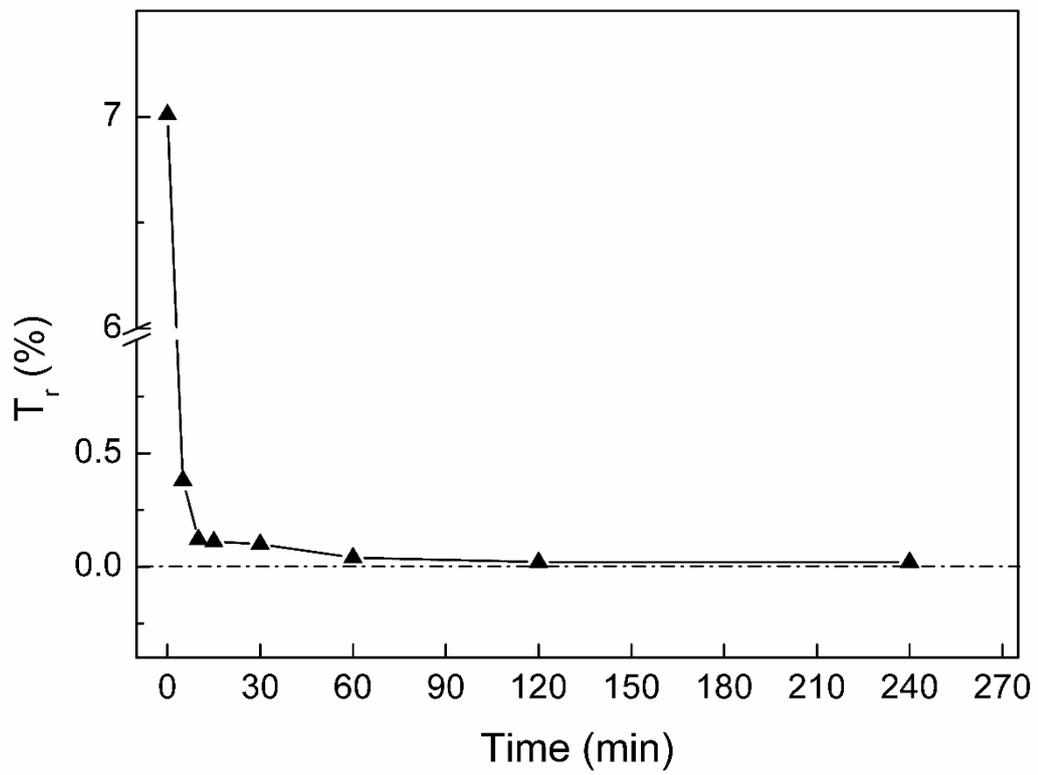

Figure S1. Dependence of the optical transmittance (T_r , %, 800 nm) of the rGO (5 wt%)/cellulose composite films on the time of reduction.

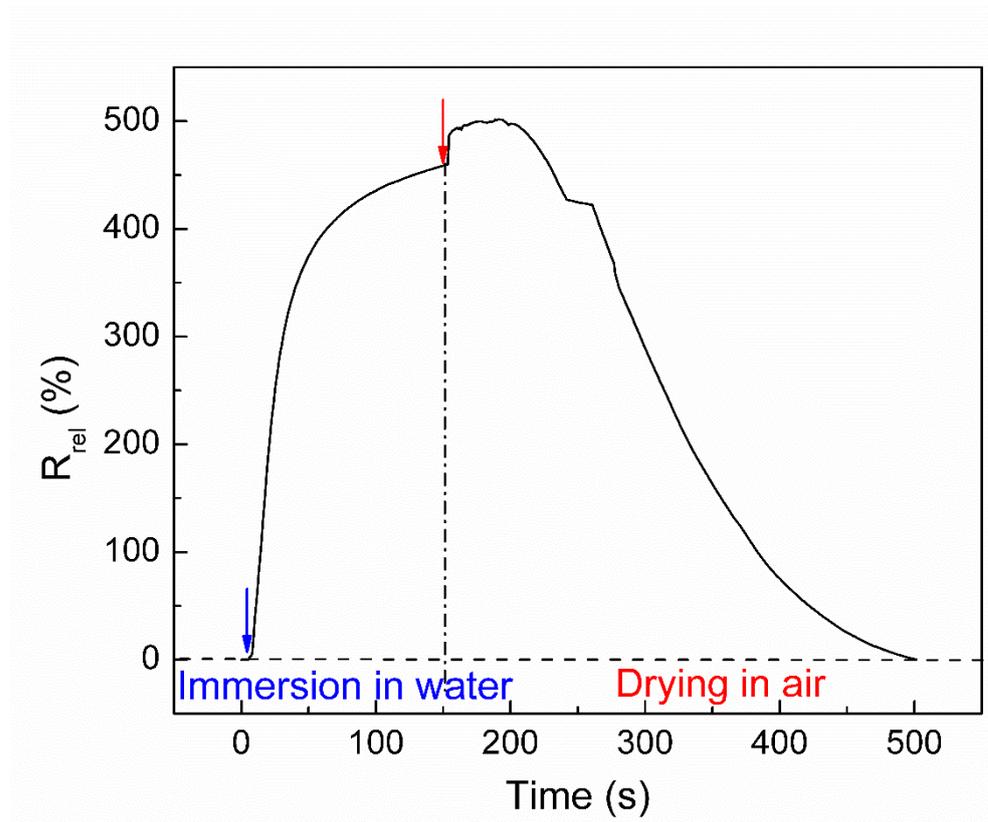

Figure S2. Relative resistance change (R_{rel}) of rGO (5 wt%)/cellulose composite film during immersion/drying (150 s/350 s) cycle in water at 20 °C.

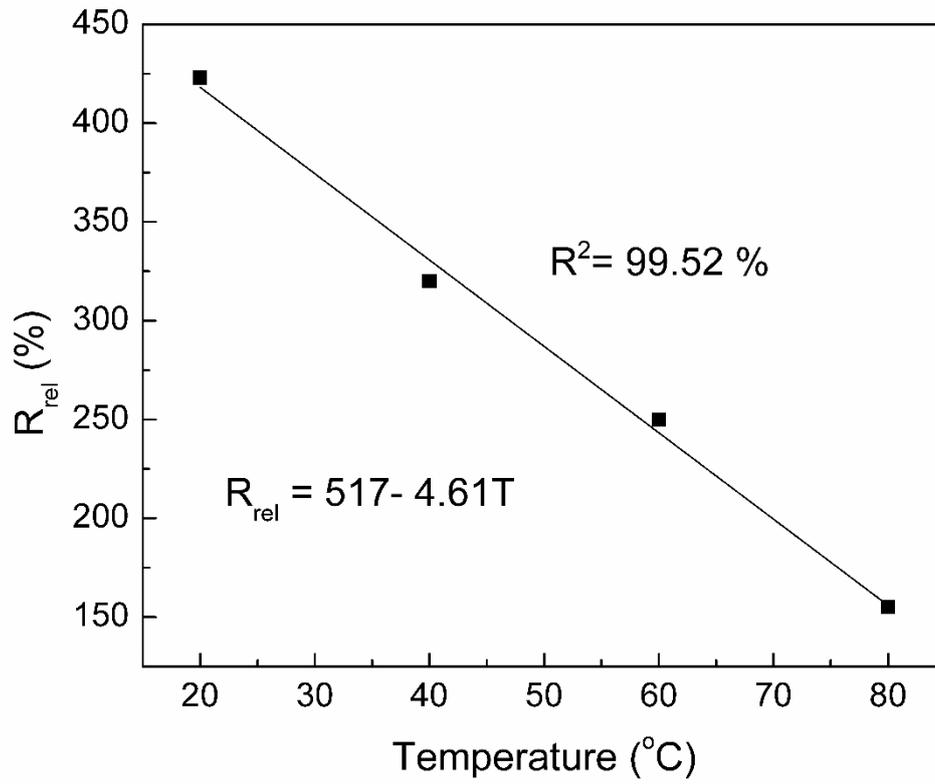

Figure S3. R_{rel} after 150 s immersion of the rGO (5 wt%)/cellulose composite into water depending on water temperature.
