

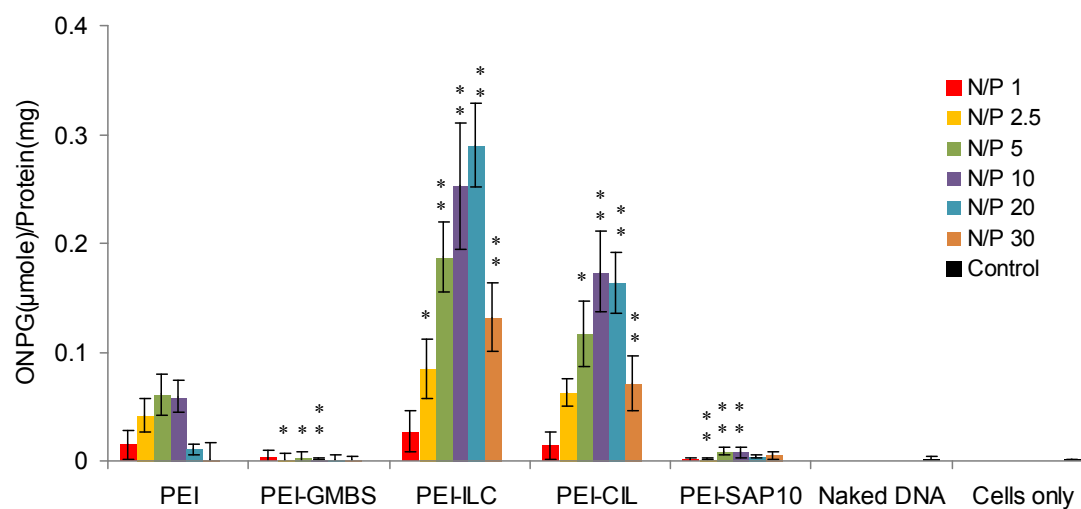

**Figure S1**

**Figure S1** The effect of FBS on *in vitro* transfection efficiency

Plasmid DNA encoding *LacZ* was complexed with PEI or conjugates in DMEM containing 10 % FBS to evaluate their transfection efficiencies in the presence of serum. (t test compared the results to those of PEI at the same N/P ratios. \*:  $p < 0.05$ ; \*\*:  $p < 0.01$ )
