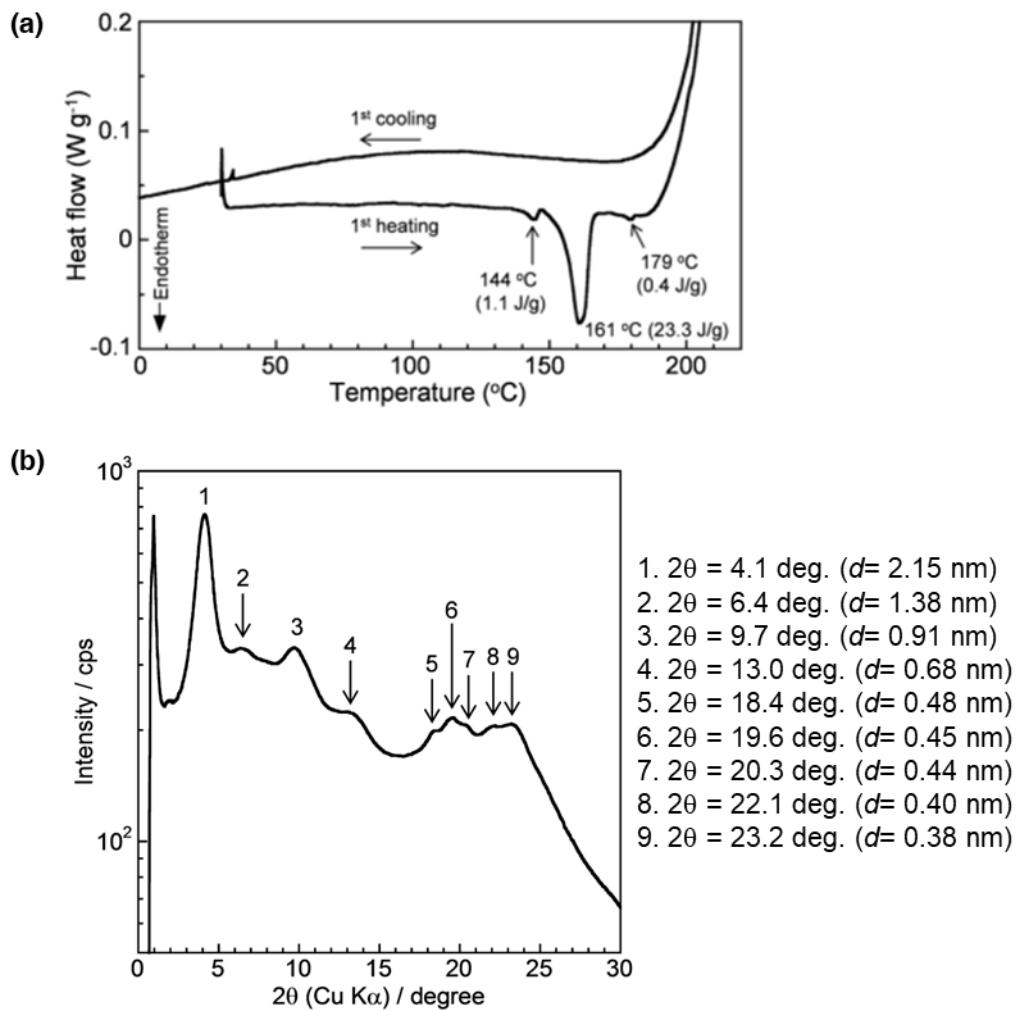

Figure S1. (a) DSC traces for the first heating and cooling cycles of 3BuAz at a rate of 2 °C/min. (b) XRD pattern of bulk sample taken at 25 °C.

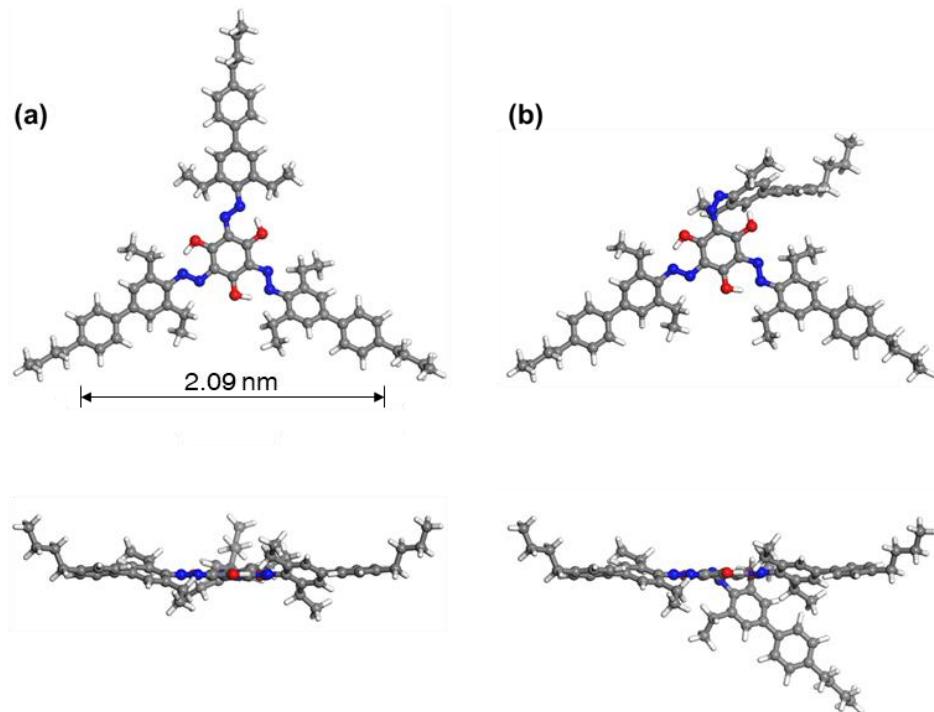

Figure S2. Top and side views for the optimized geometries of (a) C_3 -symmetric 3BuAz (with three trans azo groups) and (b) asymmetric 3BuAz (with two trans and one cis azo groups). The geometry optimizations were performed using B3LYP/6-31G(d,p)^{S1} implemented in Gaussian09 software package.^{S2} The influence of solvent (THF) on the molecular structure was considered using SCRF-SMD^{S3} solvation model. The trans to cis structural isomerization of one azo group leads to the instability of 23.1 kcal/mol in (b) with respect to (a). The lateral size of (a) is measured by the distance between the carbon atoms of flexible butyl groups connecting to the outer benzene rings.
