

Supporting Information:

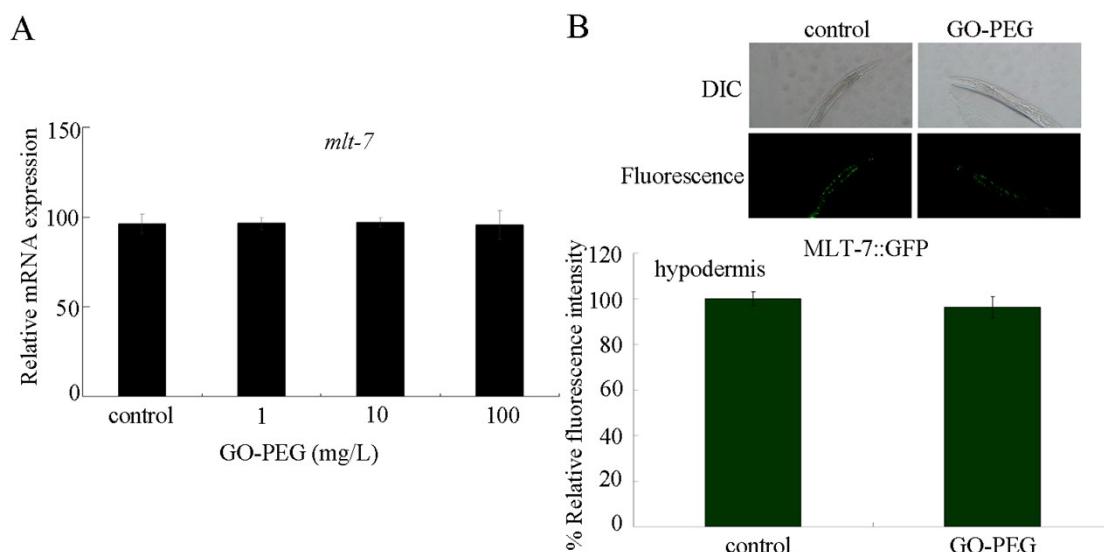

Fig. S1. Effect of GO-PEG exposure on MLT-7 expression in wild-type nematodes. (A) Effect of GO-PEG exposure on transcriptional expression of *mlt-7*. (B) Effect of GO-PEG exposure on MLT-7::GFP expression. Prolonged exposure was performed from L1-larvae to adult day-1. GO-PEG exposure concentration was 10 mg/L. Bars represent means \pm SD.

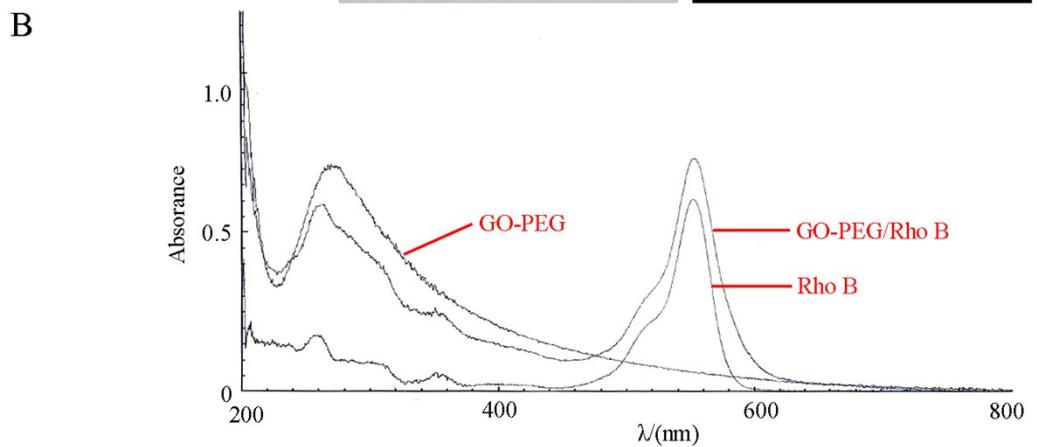

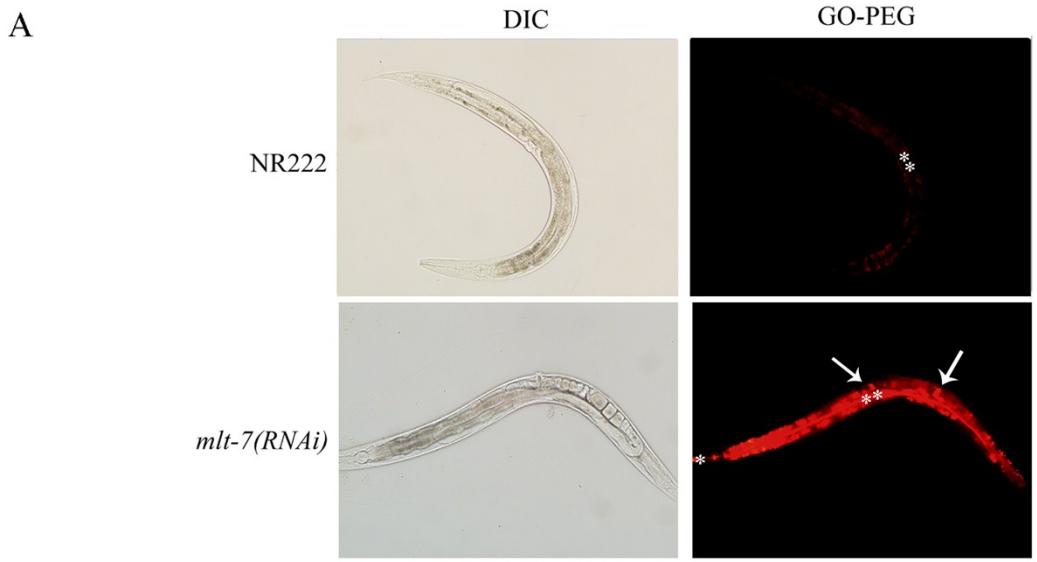

Fig. S2. Effect of epidermal-specific RNAi knockdown of *mlt-7* on GO-PEG translocation in nematodes. (A) Effect of epidermal-specific RNAi knockdown of *mlt-7* on GO-PEG translocation. Asterisks indicate the pharynx (*) in the head and the intestine (**) in the mid-region, respectively. Arrowheads indicates the spermatheca. Prolonged exposure was performed from L2-larvae to adult day-1. GO-PEG exposure concentration was 10 mg/L. (B) UV/Vis spectra of RhoB before and after adsorption on GO-PEG.

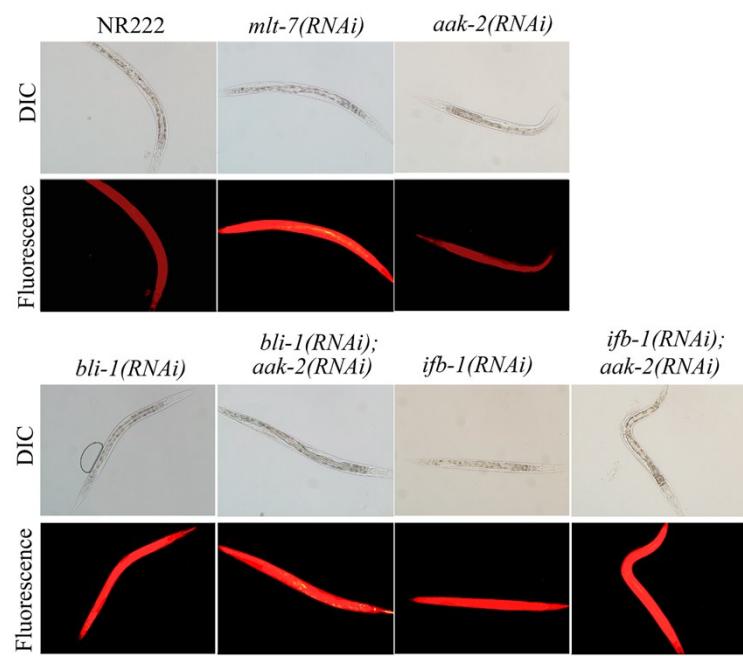

Fig. S3. Rho B distribution in NR222, and nematodes with epidermal-specific RNAi knockdown of certain gene(s).
