

Supplementary material

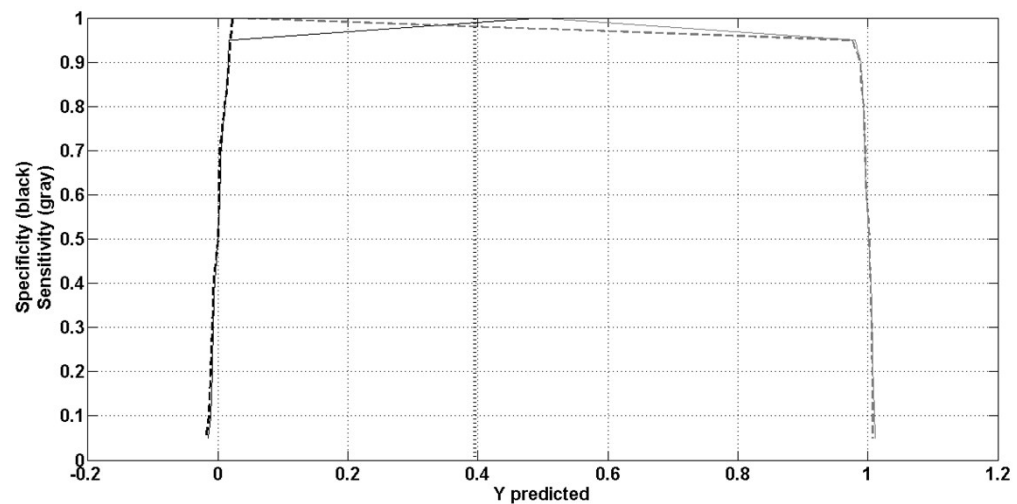

Figure 1S. ROC curve for organic sugar crystal. Solid lines correspond to the predicted values from PLS-DA model. Dashed lines correspond to the cross-validation predicted values (contiguous block of 5 samples). The vertical pointed black bold line corresponds to the threshold value of 0.3953.

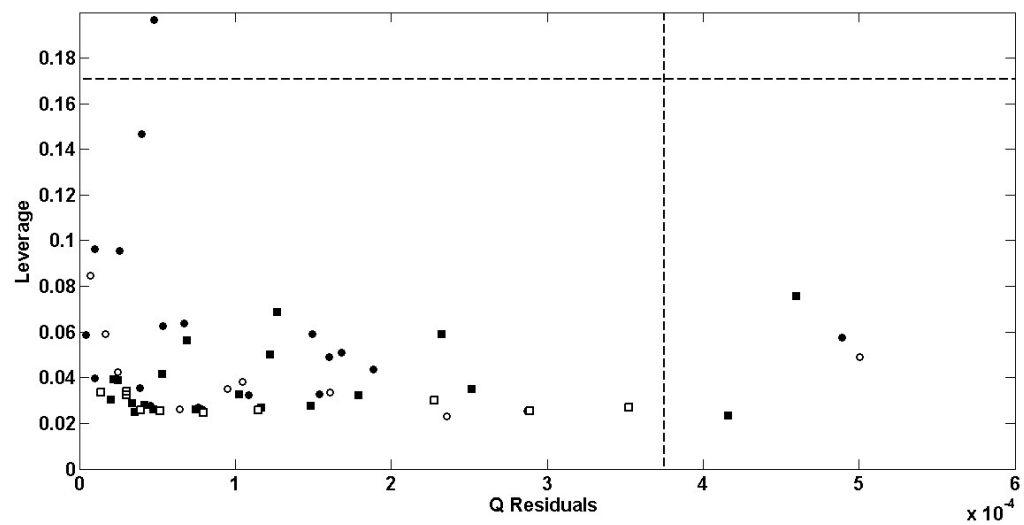

Figure 2S. Q residuals against leverage for the crystal sugar PLS-DA model. (●) organic samples in training (○) organic samples in validation. (■) conventional samples in training. (□) conventional samples in validation.
