Supporting Information

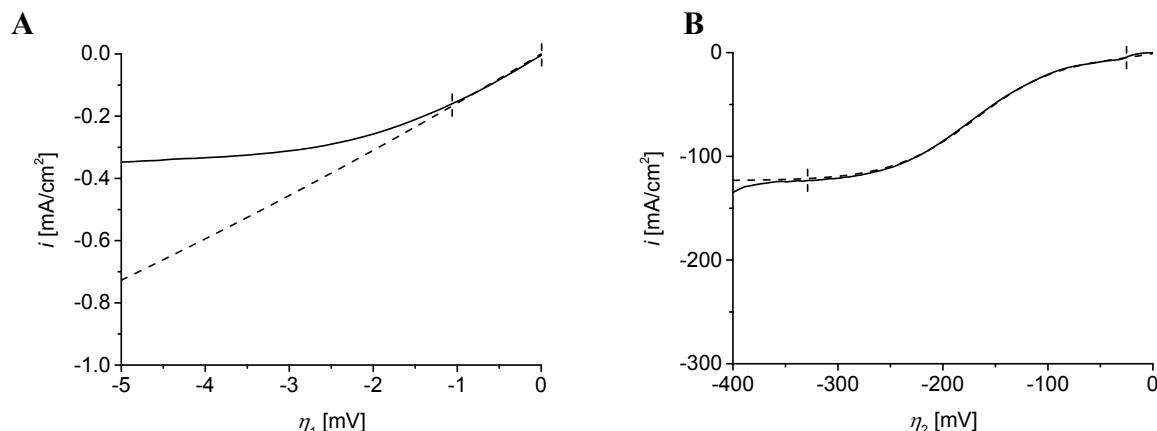

Figure S1. (A) Experimental LSV data for VMS with chloride and SES (solid line) and corresponding fit with equation (3) (dashed line). (B) Experimental LSV data for VMS with chloride and SES (solid line) and corresponding fit with equation (2) (dashed line).

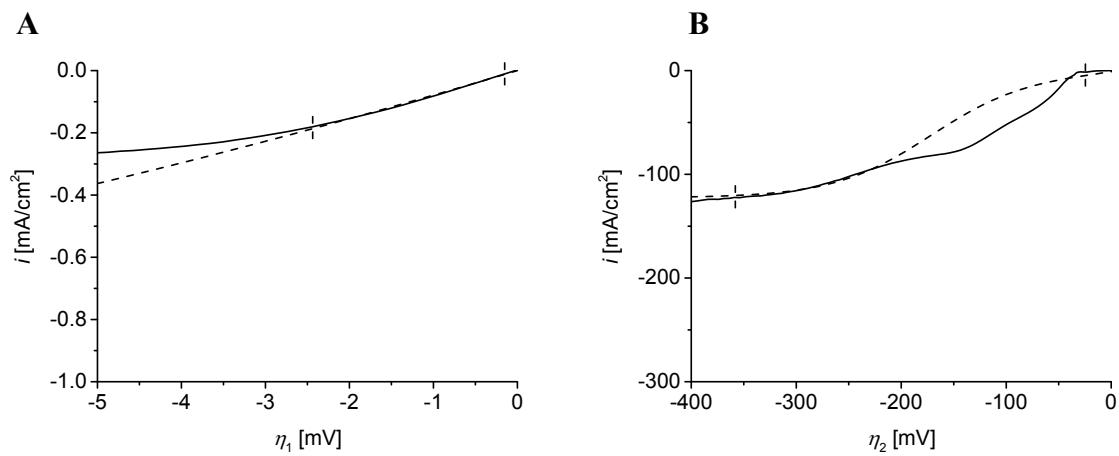

Figure S2. (A) Experimental LSV data for VMS with chloride and SBS (solid line) and corresponding fit with equation (3) (dashed line). (B) Experimental LSV data for VMS with chloride and SBS (solid line) and corresponding fit with equation (2) (dashed line).

In accordance with [T. P. Moffat, D. Wheeler, D. Josell, *Journal of The Electrochemical Society* **2004**, *151*, C262-C271.], no attempt was made to describe the peak(s) evident at overpotentials between approximately -50 mV and -200 mV.

Table S3. Raman mode assignments. ν = stretch, δ = bend, τ = torsion, ρ = rock, ω = wag
