## Electronic Supplementary Information:

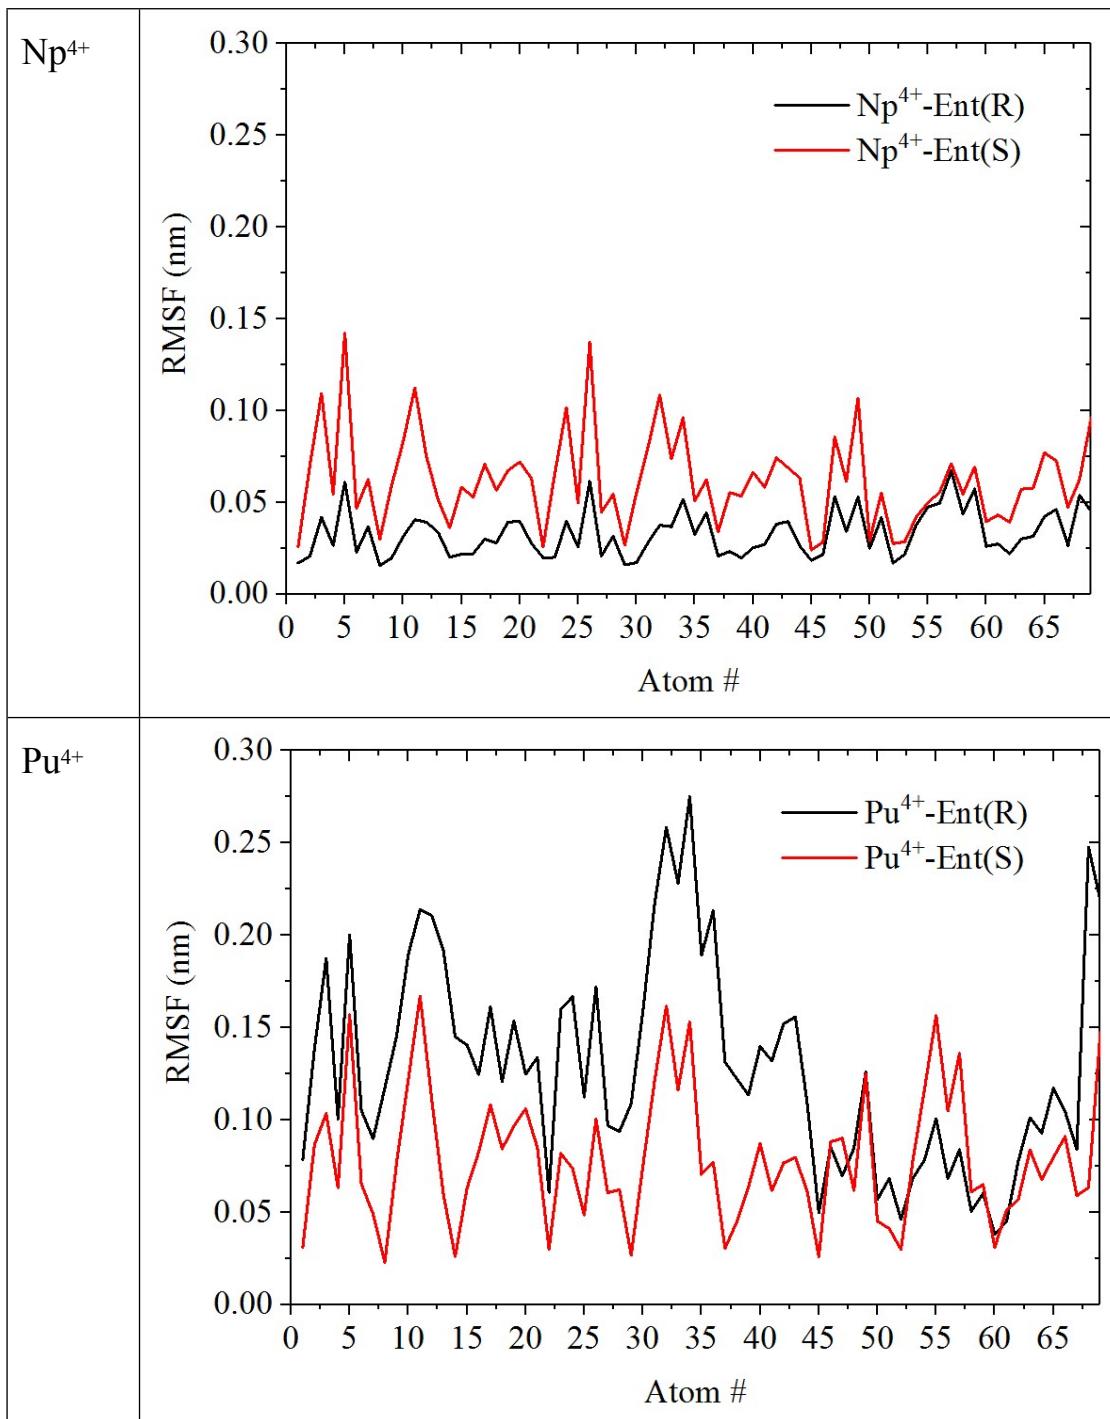

### 1. RMSF

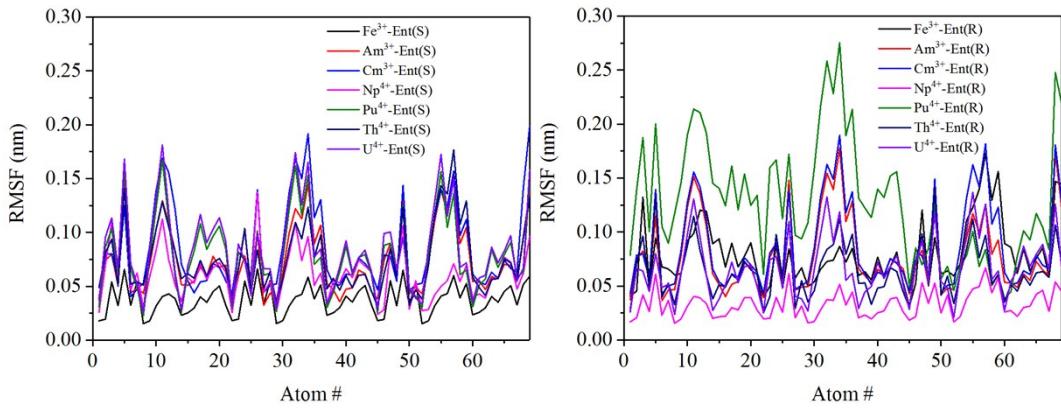

**Table S1.** The root mean square fluctuation (RMSF) of heavy atoms of Ent(S) and Ent(R) during M<sup>3+/4+</sup>-Ent MD simulations. (unit: nm)

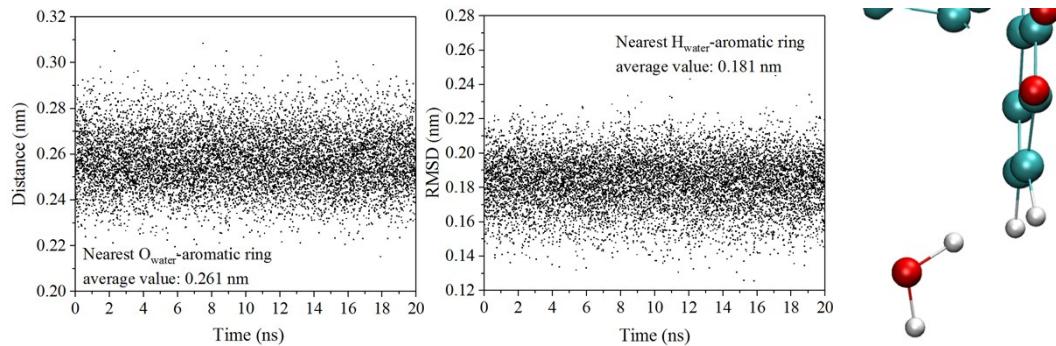

**Figure S1.** The root mean square fluctuation (RMSF) of heavy atoms of Ent(S) and Ent(R) during  $M^{3+/4+}$ -Ent MD simulations. (unit: nm)

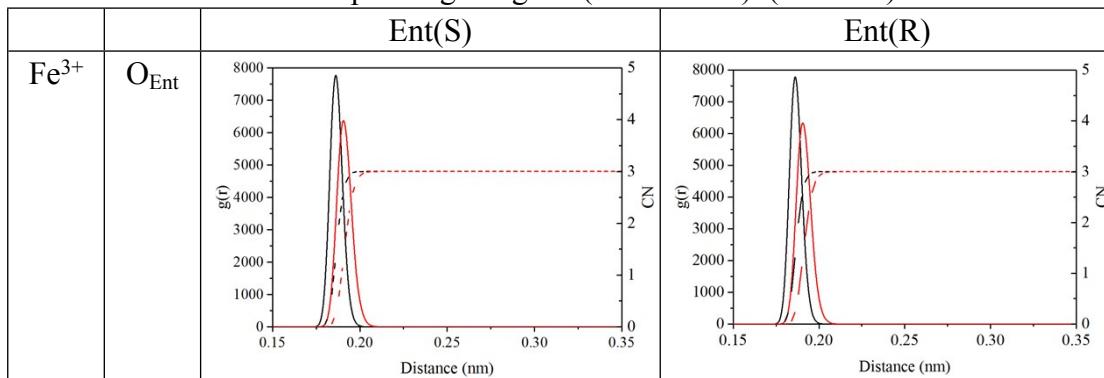

## 2. Interaction interface of water and aromatic ring

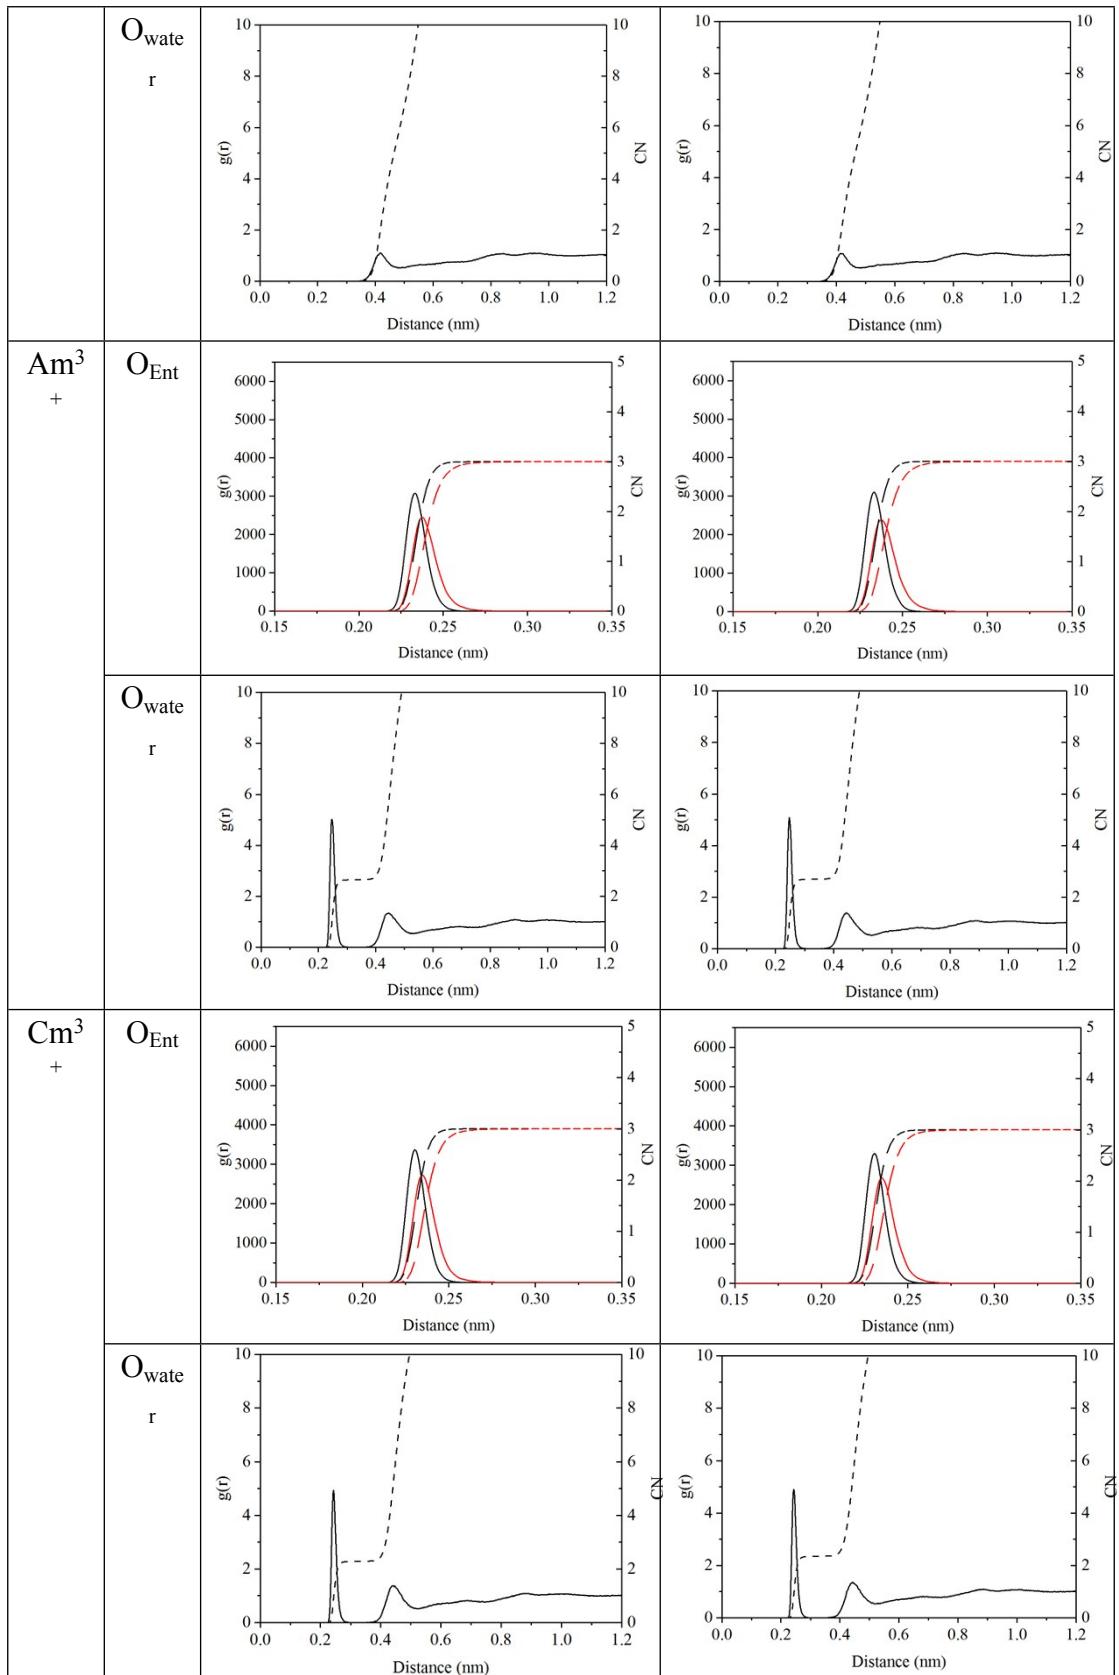

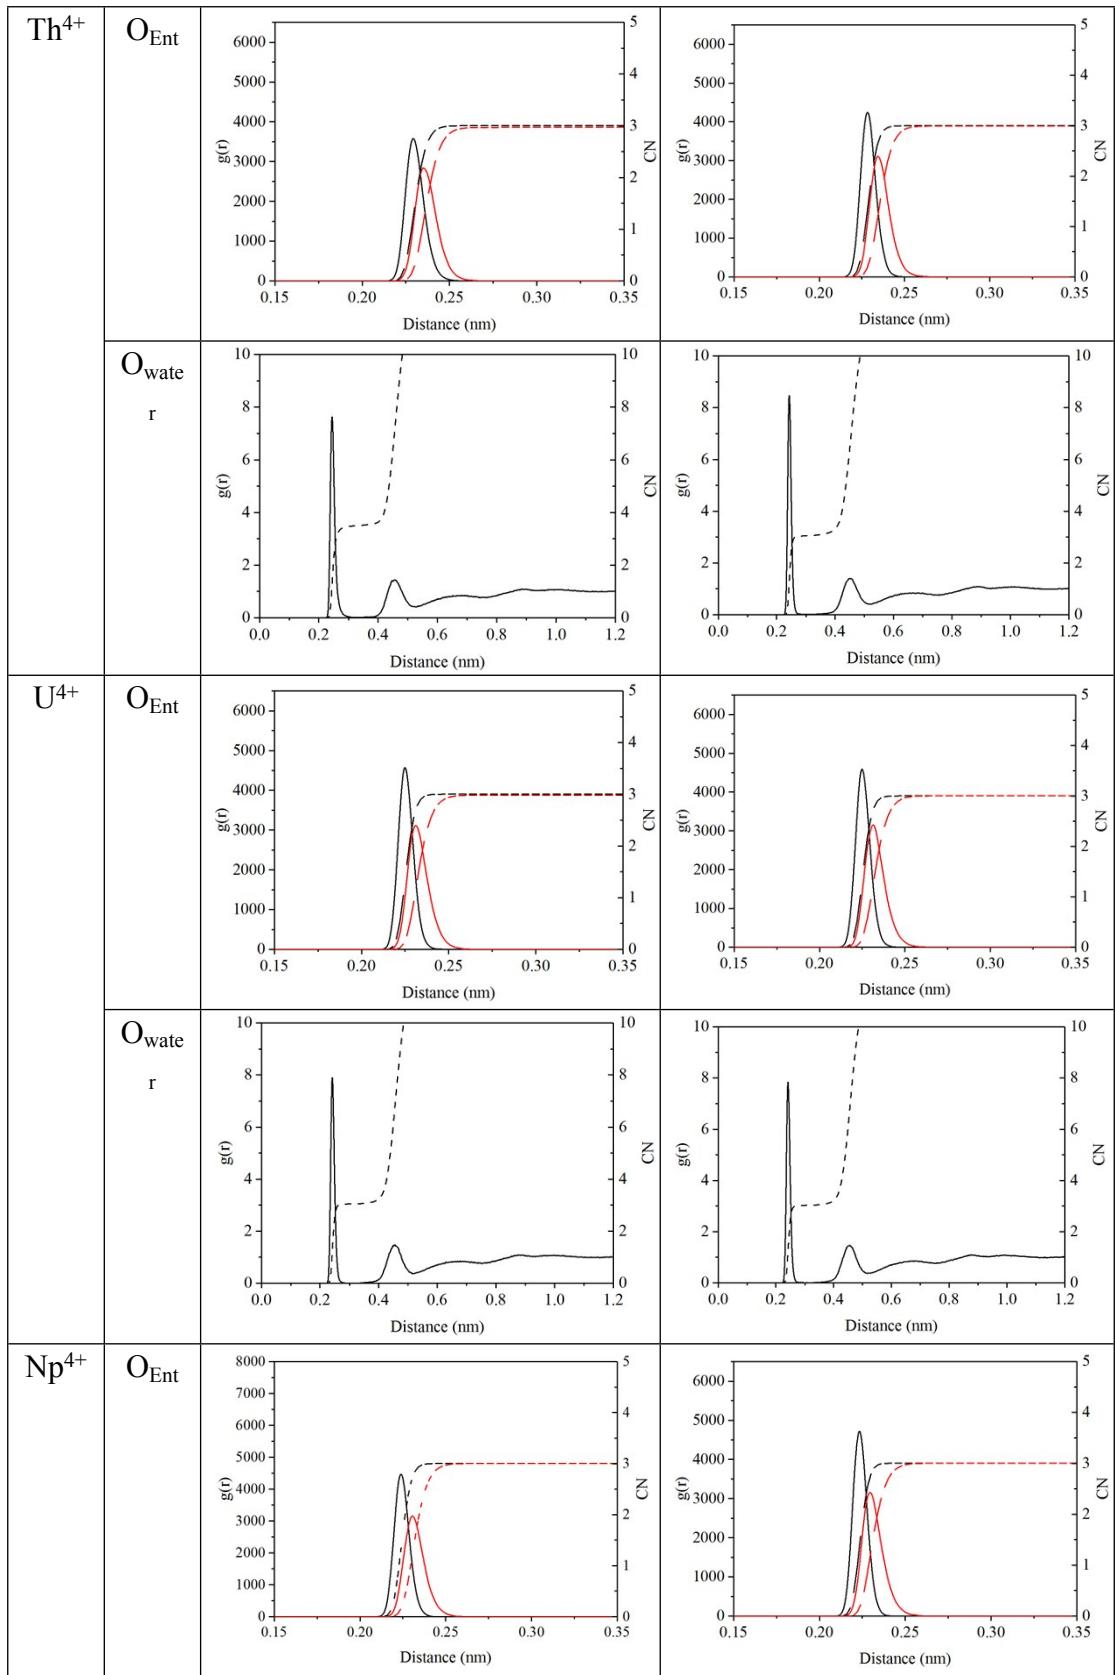

**Figure S2.** The distance between nearest  $O_{\text{water}}$  (left) /  $H_{\text{water}}$  (middle) and aromatic ring atoms of catechol during the dynamics, and their average value is marked. A snapshot of interaction model is represented (right). (unit: nm)

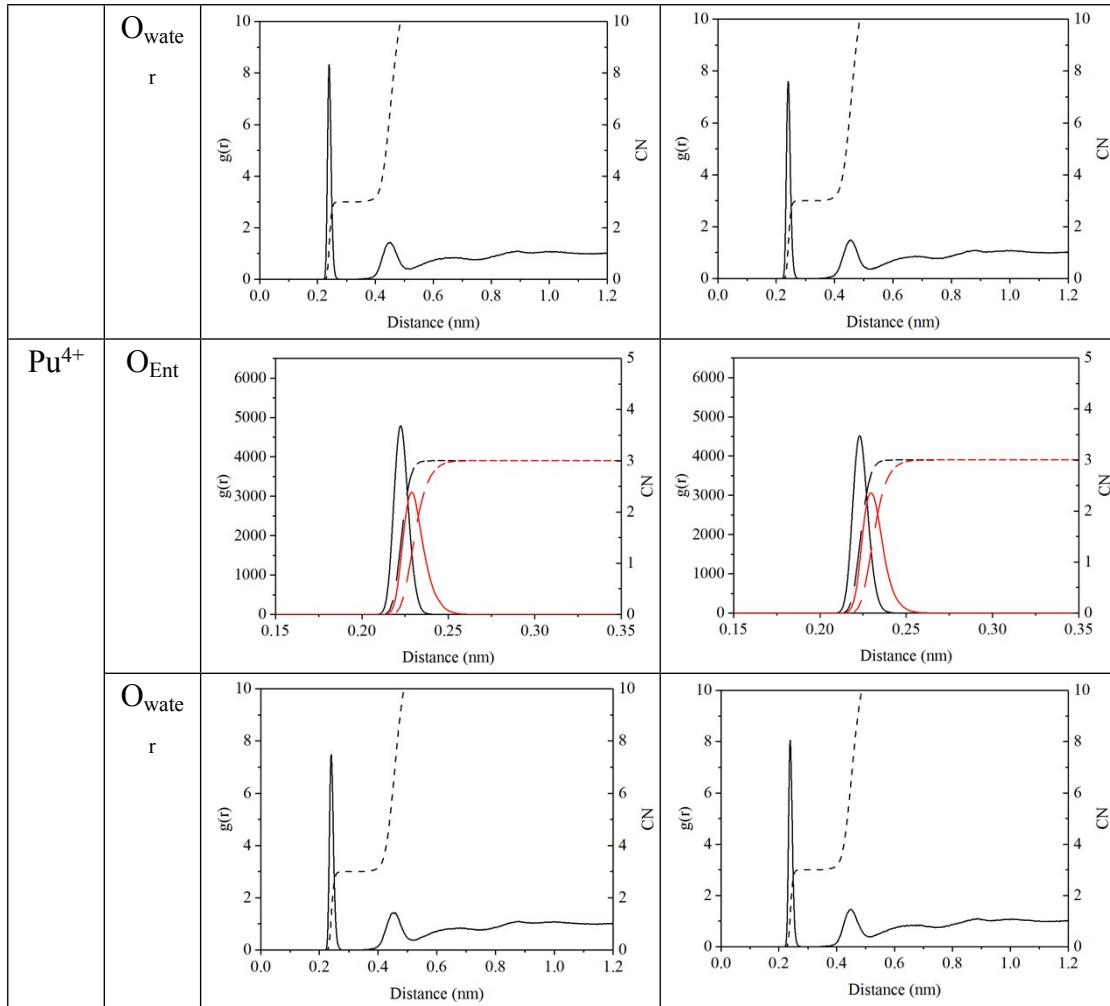

## 3. RDF

**Table S2.** Radial distribution functions (RDF) of  $O_{\text{Ent}}$  ( $O_o$ : black;  $O_i$ : red) and  $O_{\text{water}}$  (bottom) around metal ion ( $\text{Fe}^{3+}$ ,  $\text{Am}^{3+}$ ,  $\text{Cm}^{3+}$ ,  $\text{Th}^{4+}$ ,  $\text{U}^{4+}$ ,  $\text{Np}^{4+}$ ,  $\text{Pu}^{4+}$ ) and the corresponding integrals (dotted lines). (unit: nm)

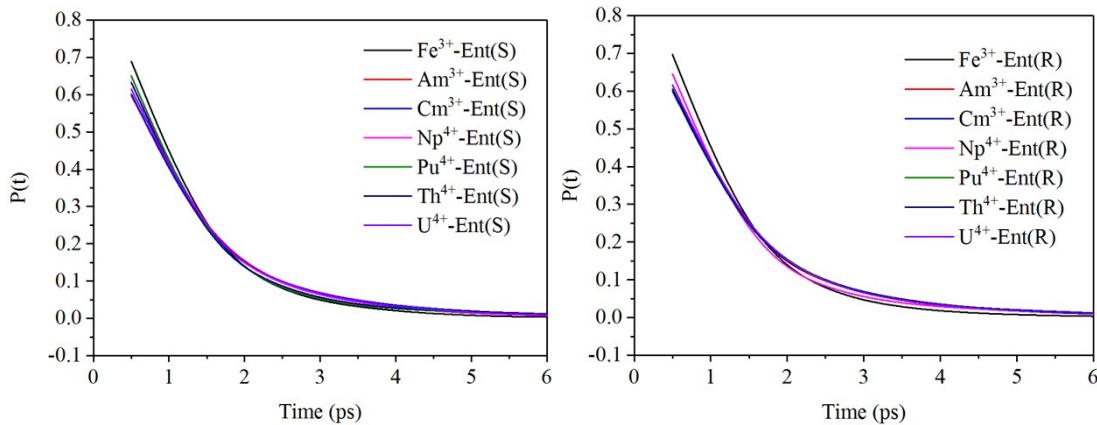

#### 4. H-bond lifetime

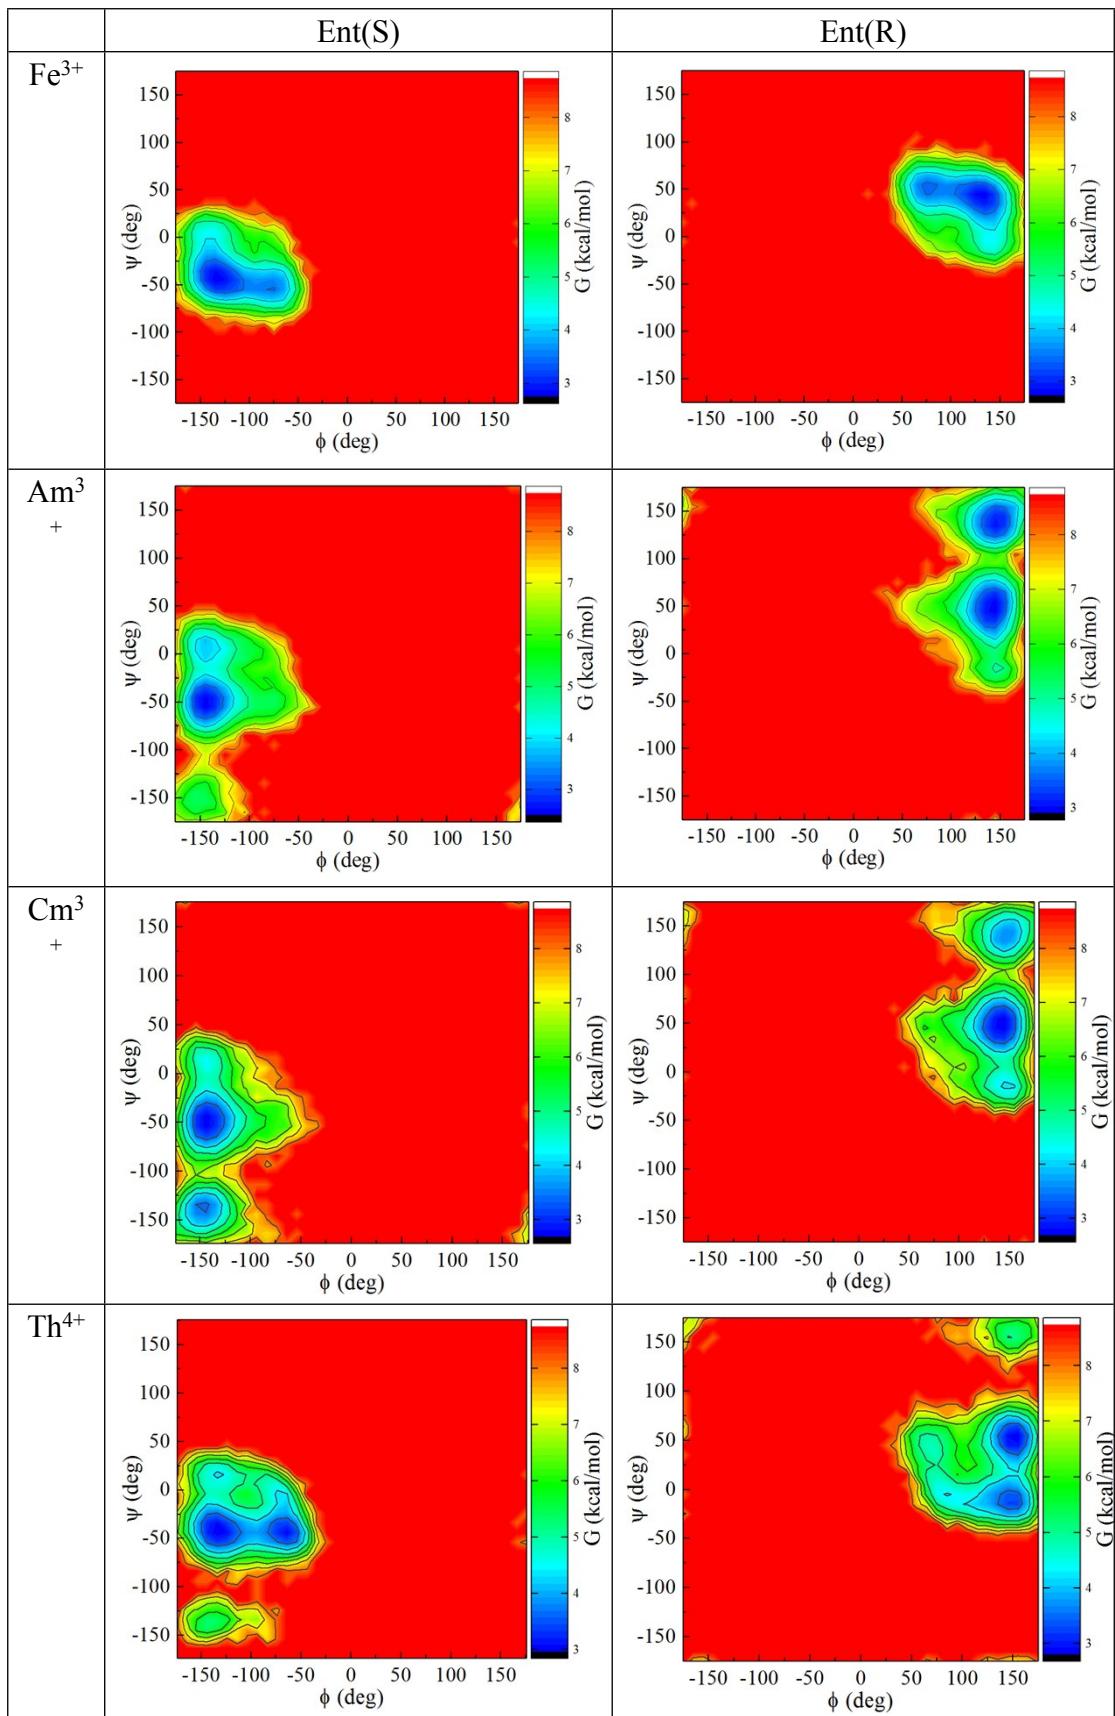

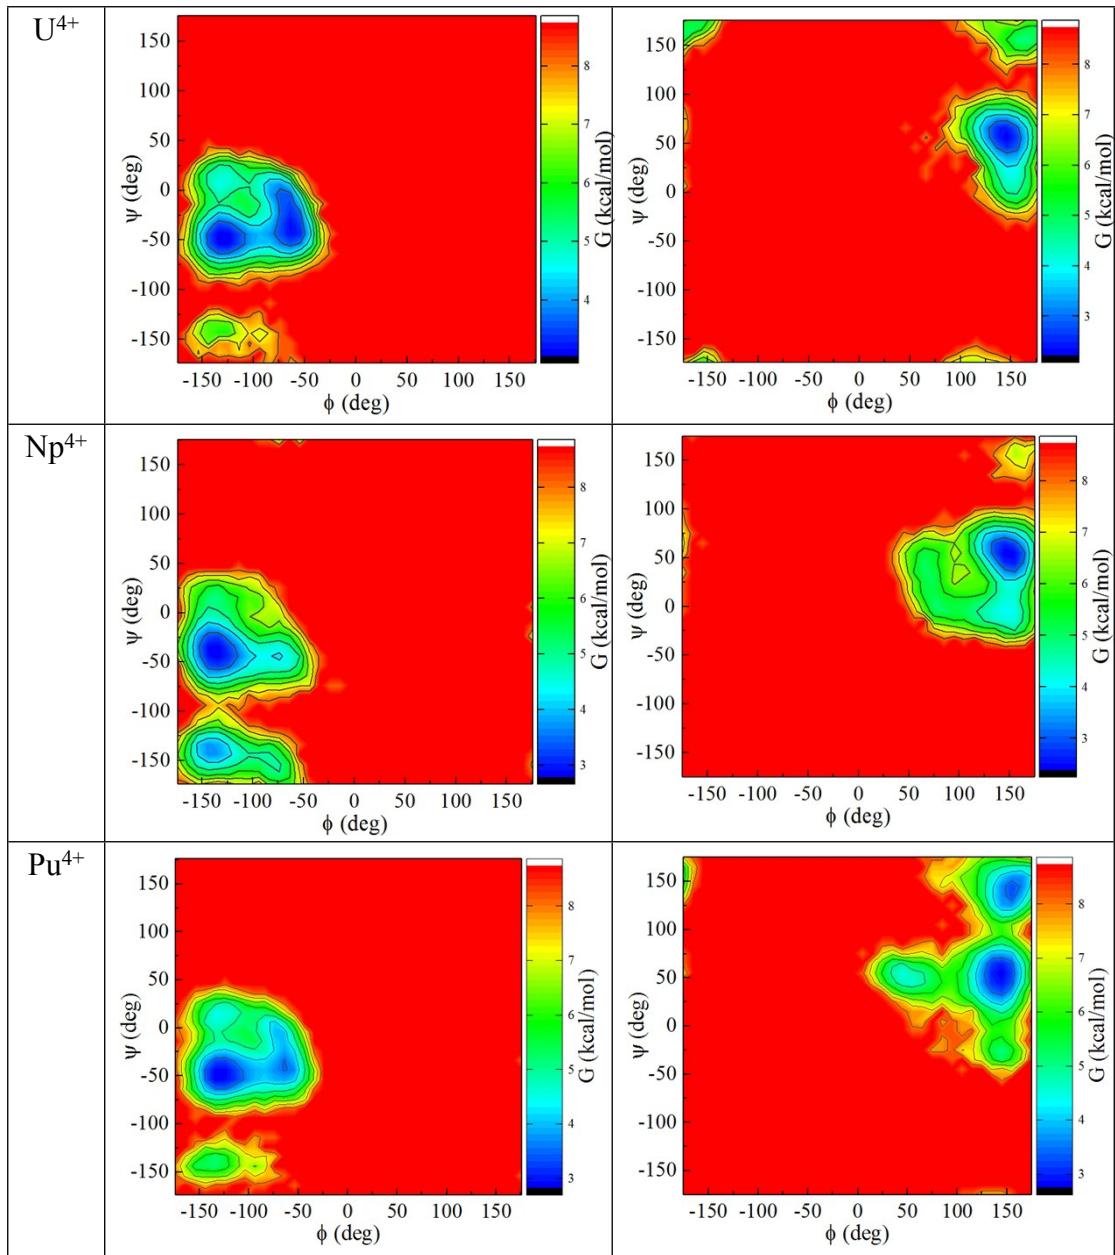

**Figure S3.** The lifetime of H-bond between Ent and water in  $M^{3+/4+}$ -Ent(S) (**left**) and  $M^{3+/4+}$ -Ent(R) (**right**) MD simulations.

#### 5. Ramachandran plot

**Table S3.** Ramachandran map of Ent(S, R) complexes with  $Fe^{3+}$ ,  $Am^{3+}$  and  $Am^{4+}$ .

The maps are similar for the three  $(\phi_i, \psi_i)$  pairs of the serine linker in each complex, and only the  $(\phi_A, \psi_A)$  pairs are shown for simplicity.

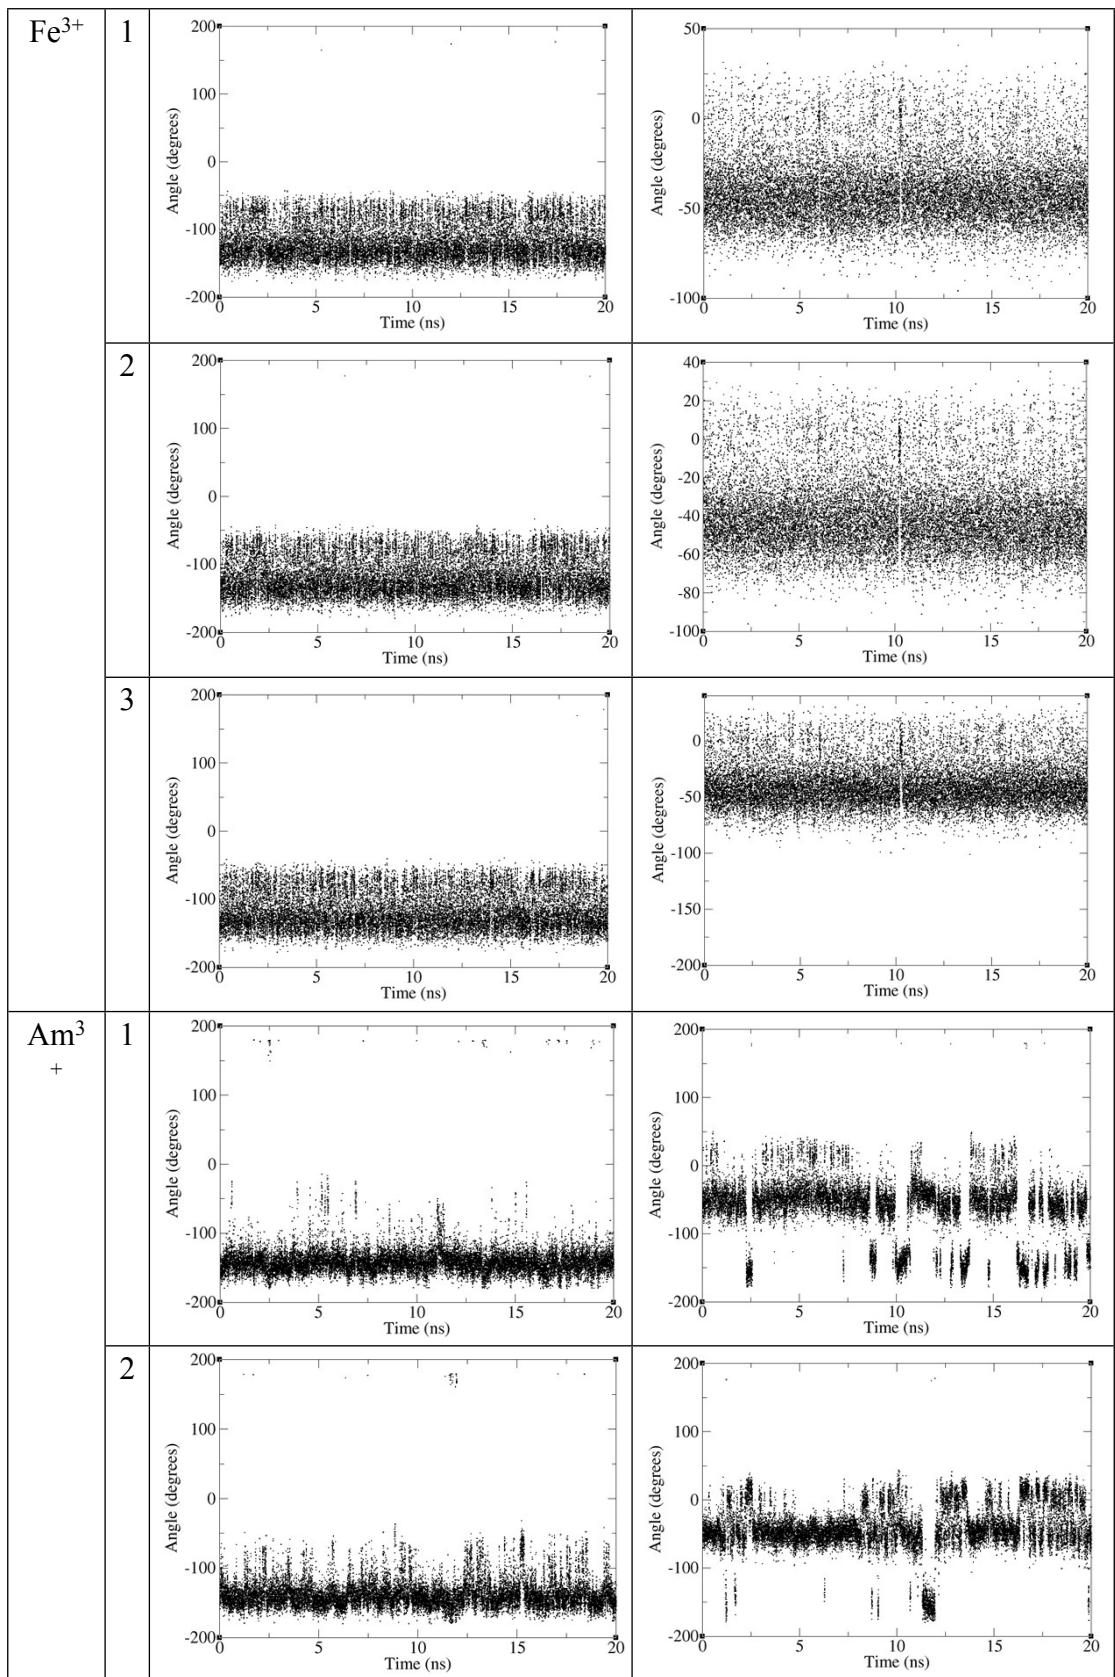

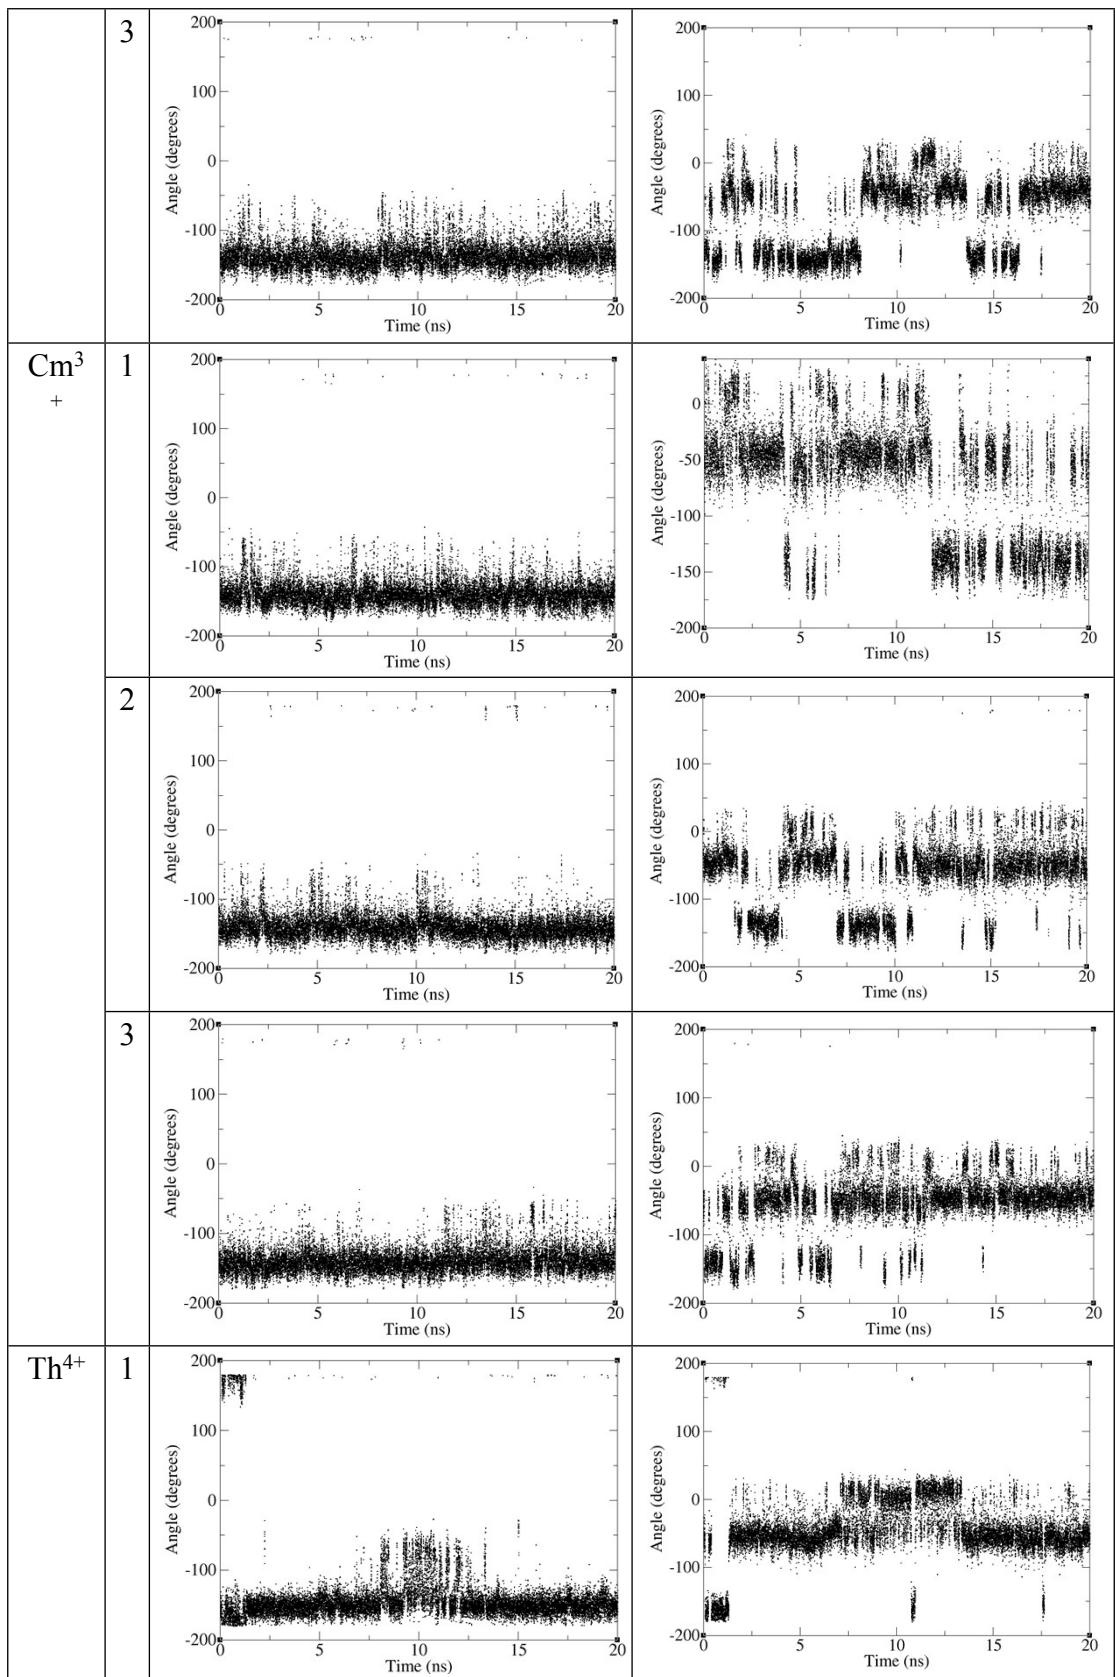

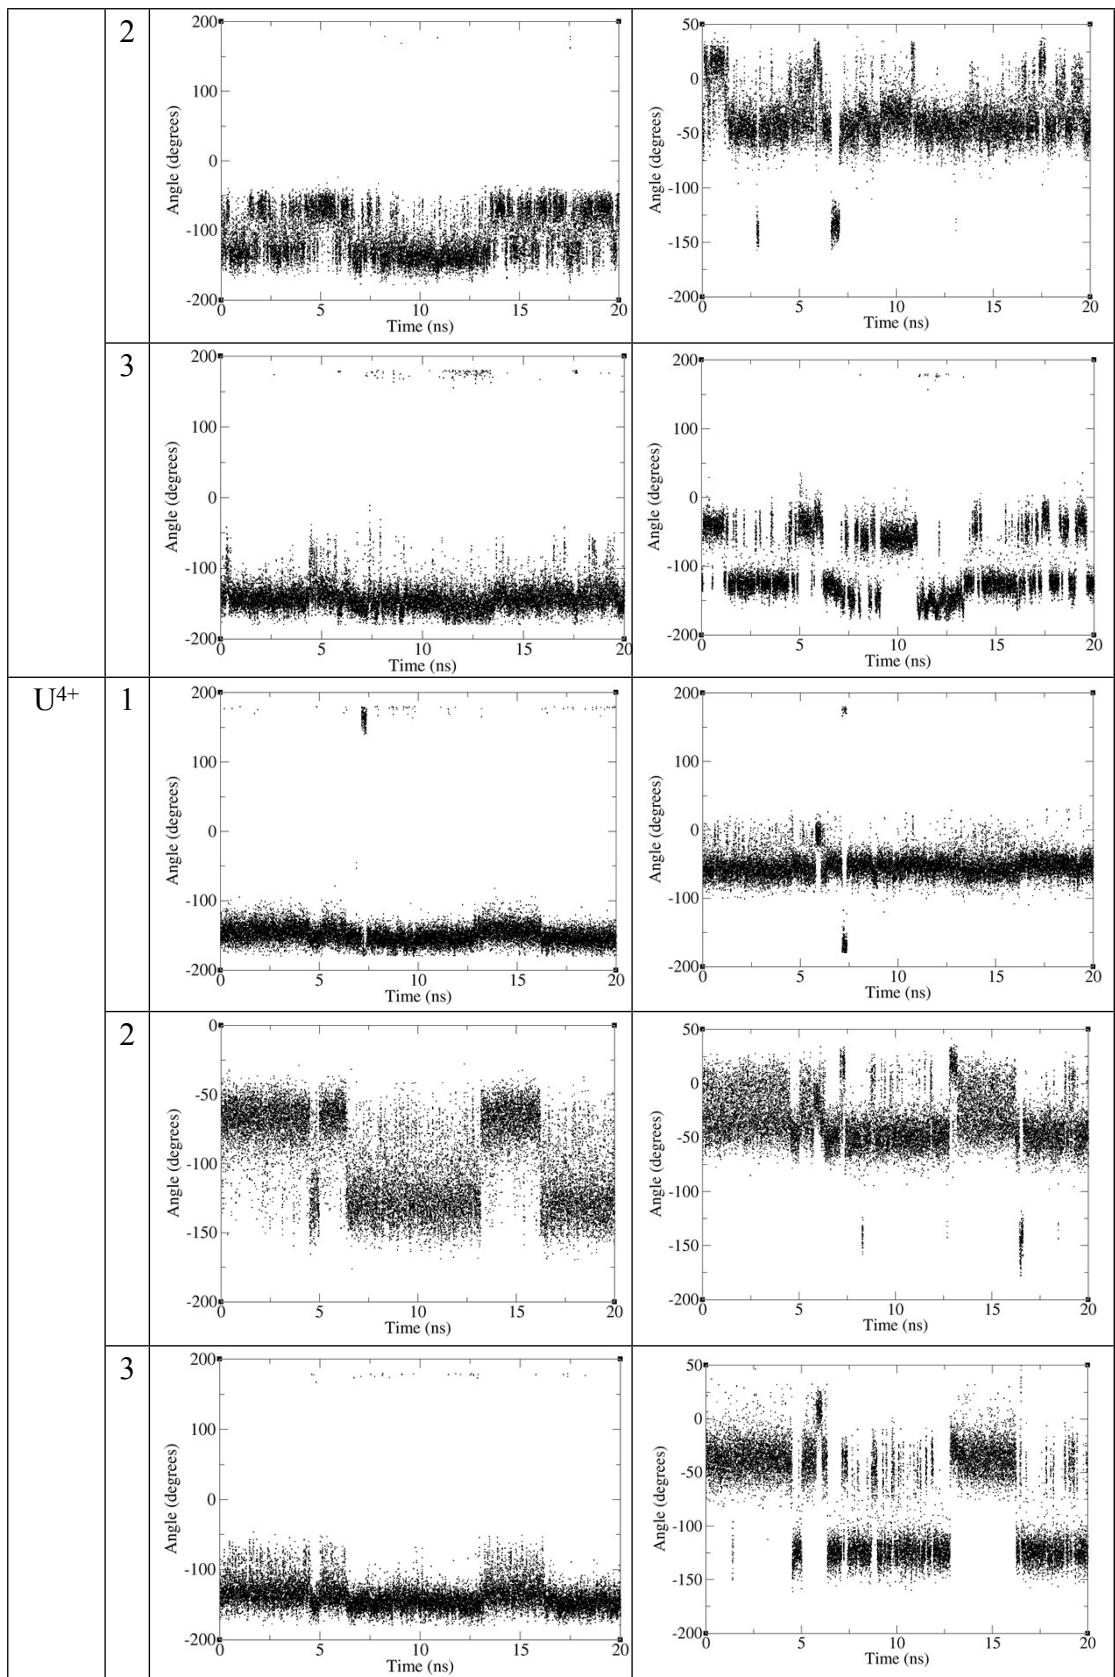

## 6. $\phi / \psi$ time evolution

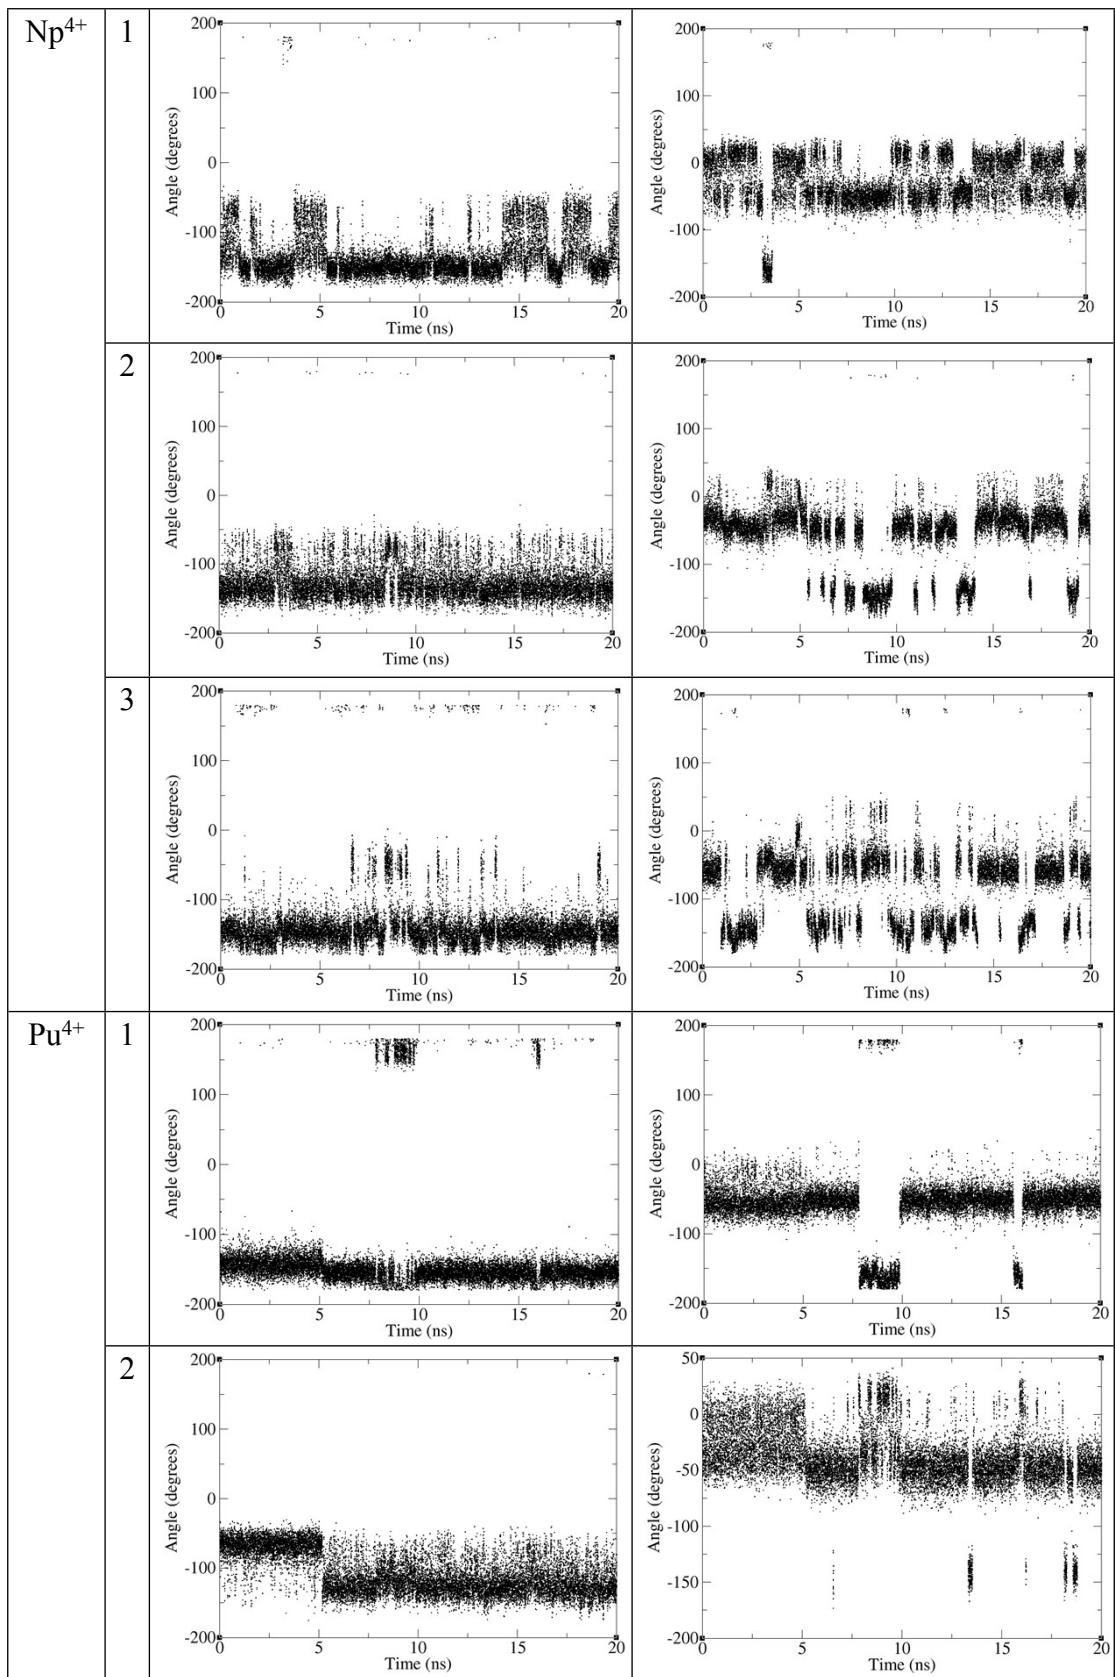

**Table S4.** Each  $\phi, \psi$  change with time evolution in  $\text{An}^{3+/4+}$ -Ent(S) complex during MD simulations.

		Ent(S)	
		$\phi$	$\psi$

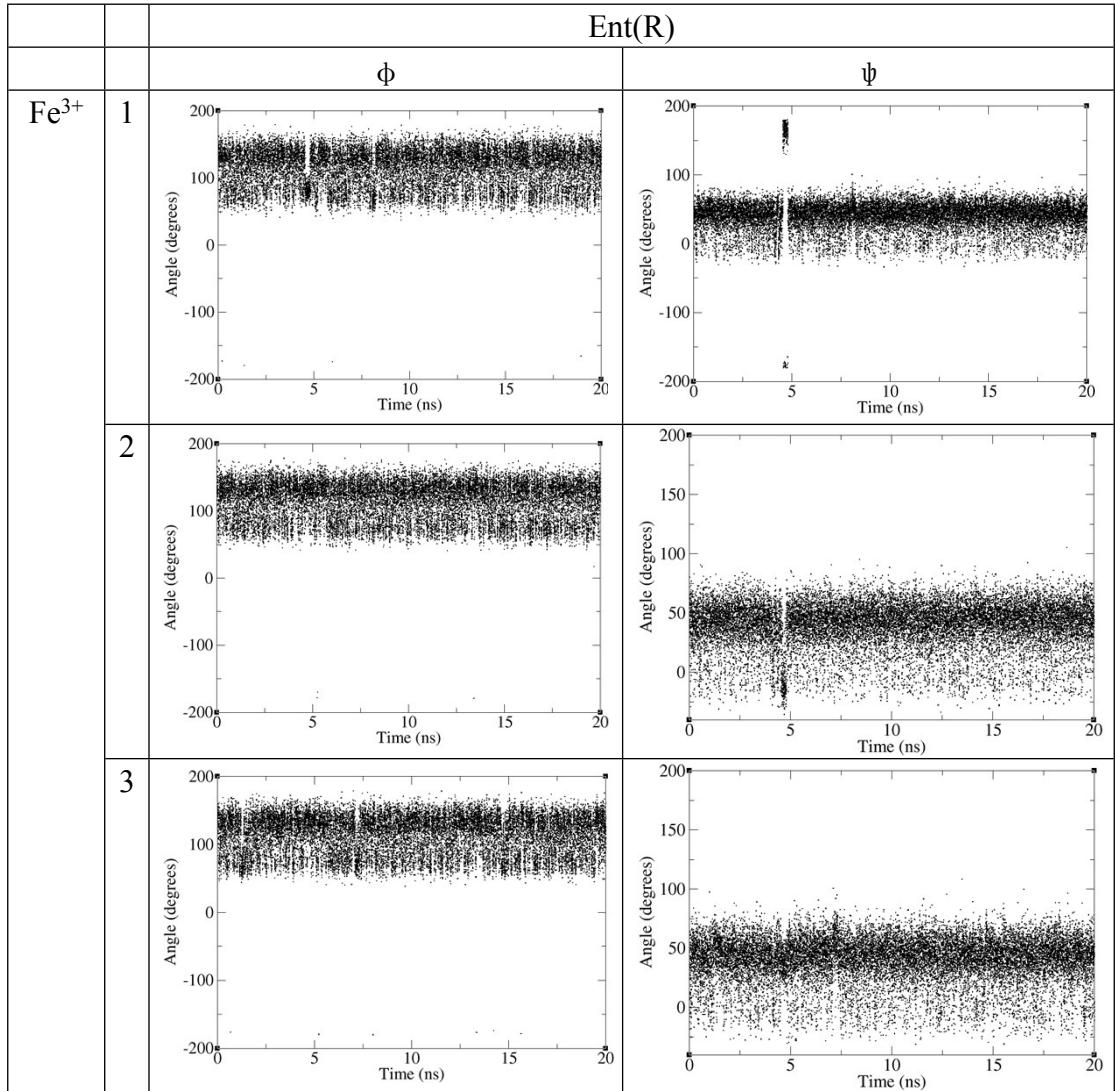

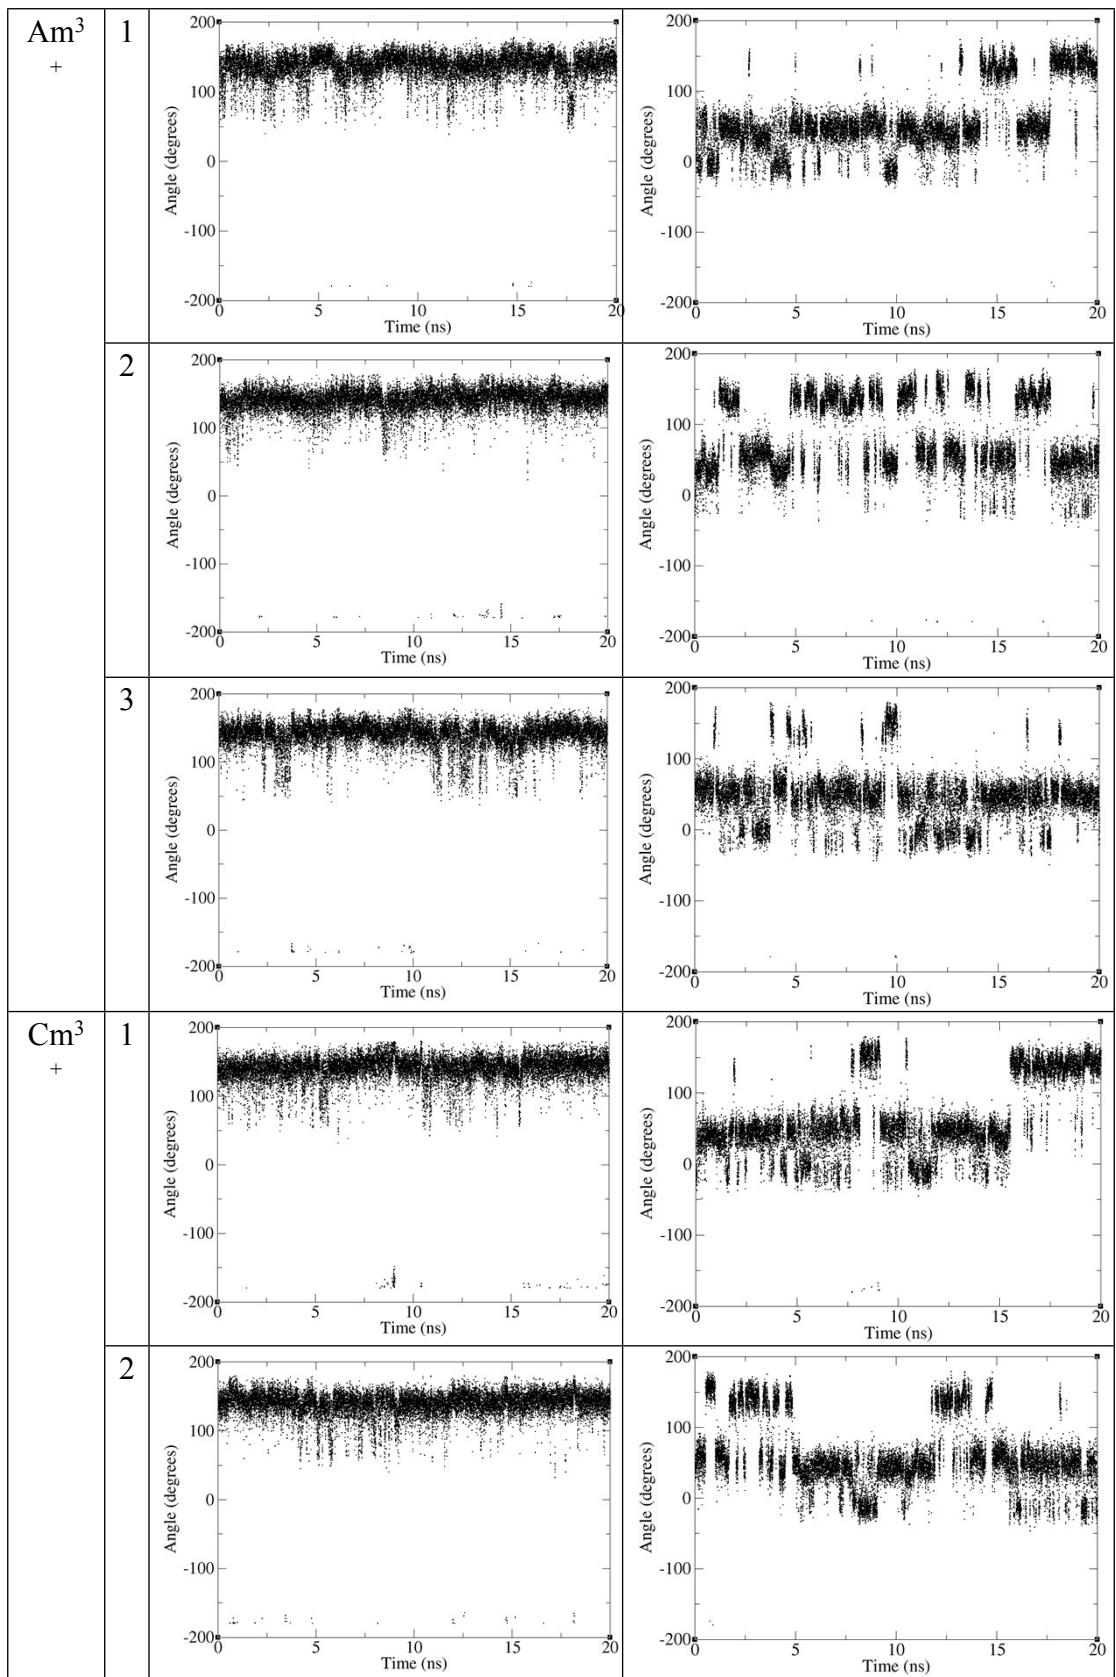

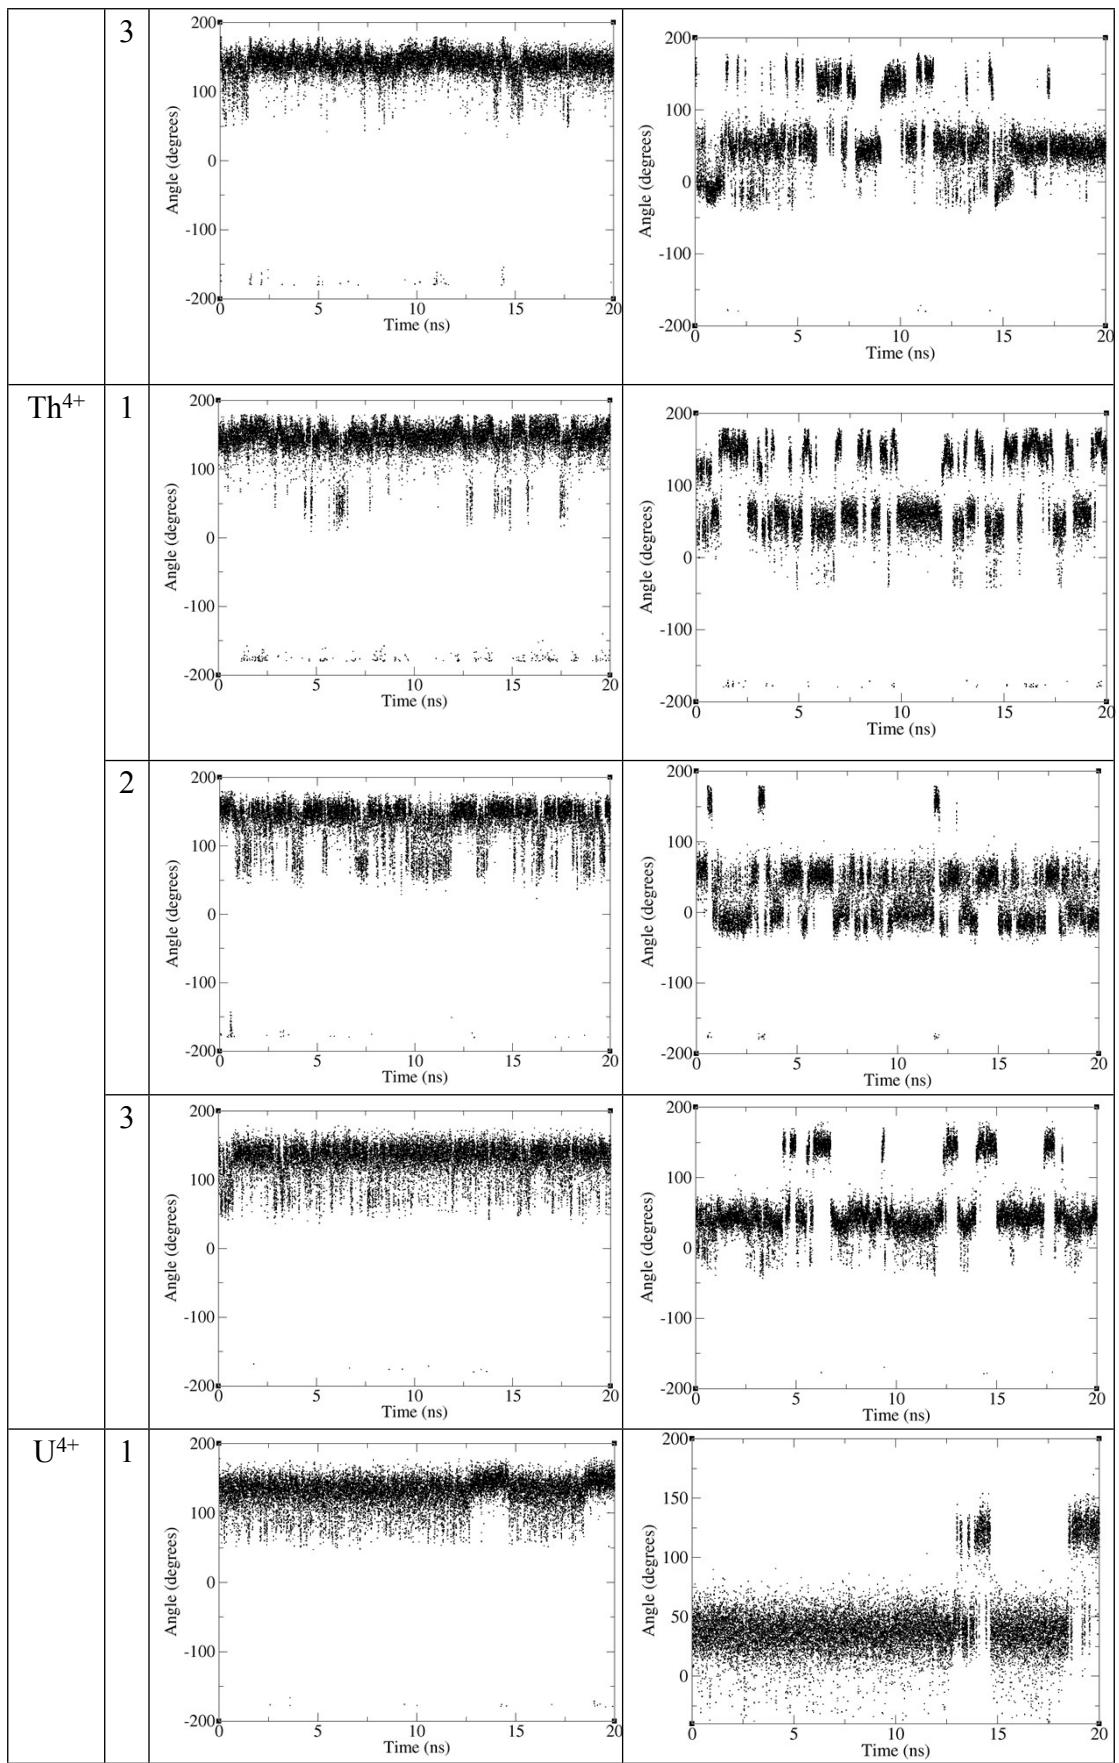

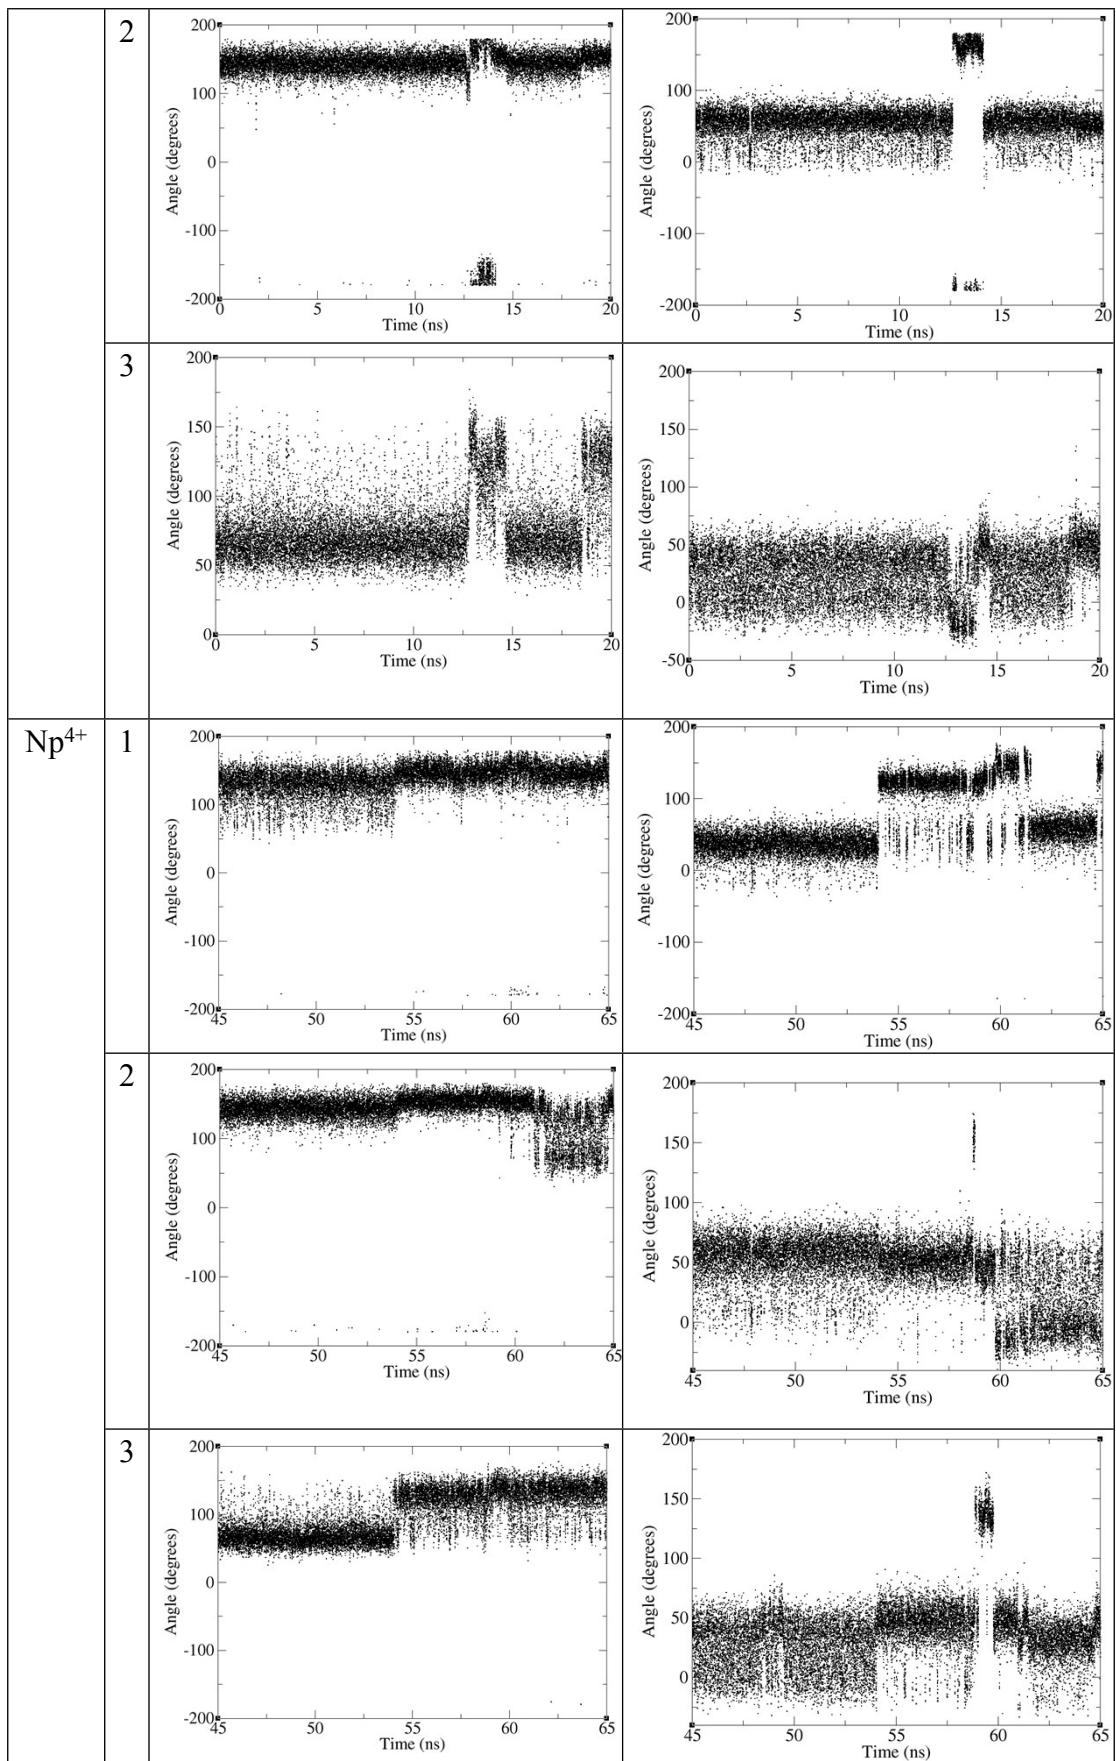

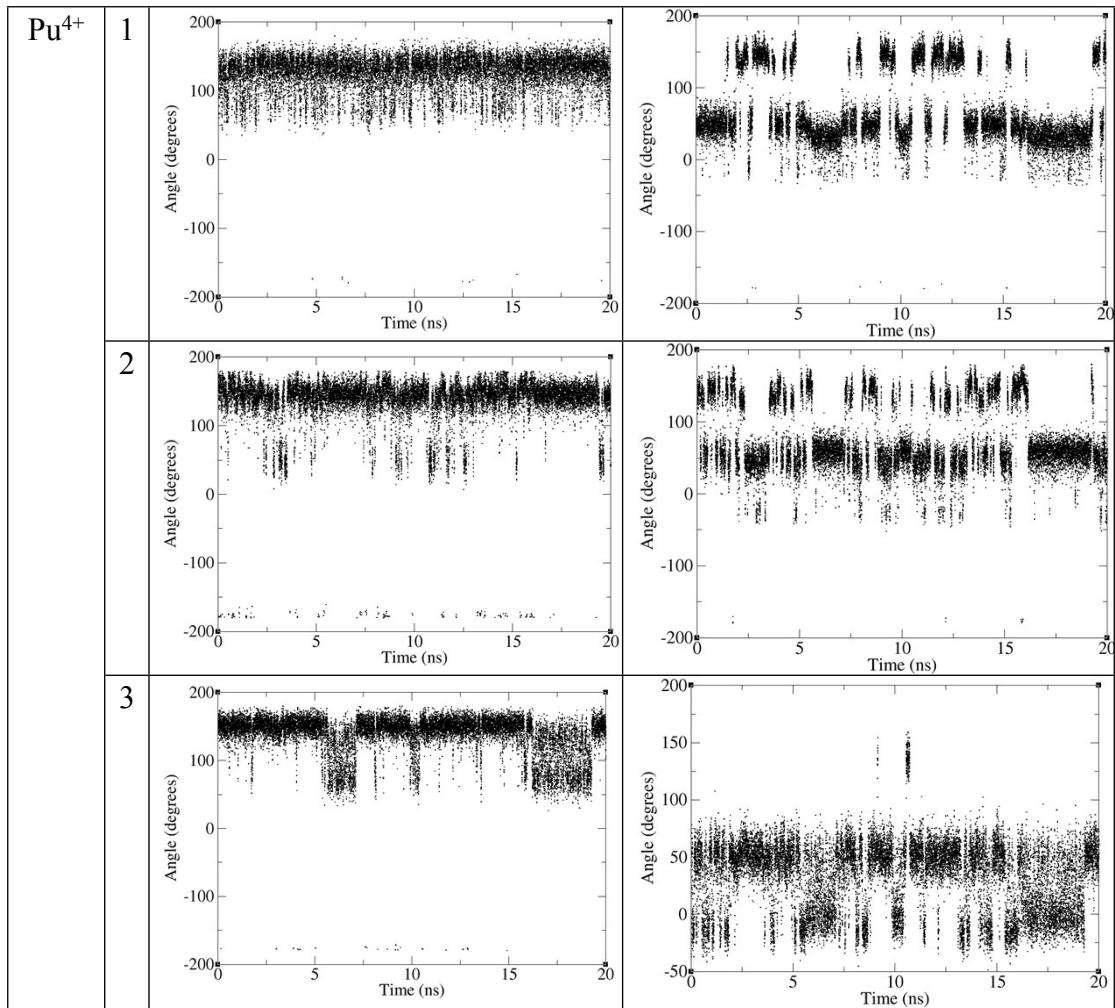

**Table S5.** Each  $\phi$ ,  $\psi$  change with time evolution in  $\text{An}^{3+/4+}$ -Ent(R) complex during MD simulations.

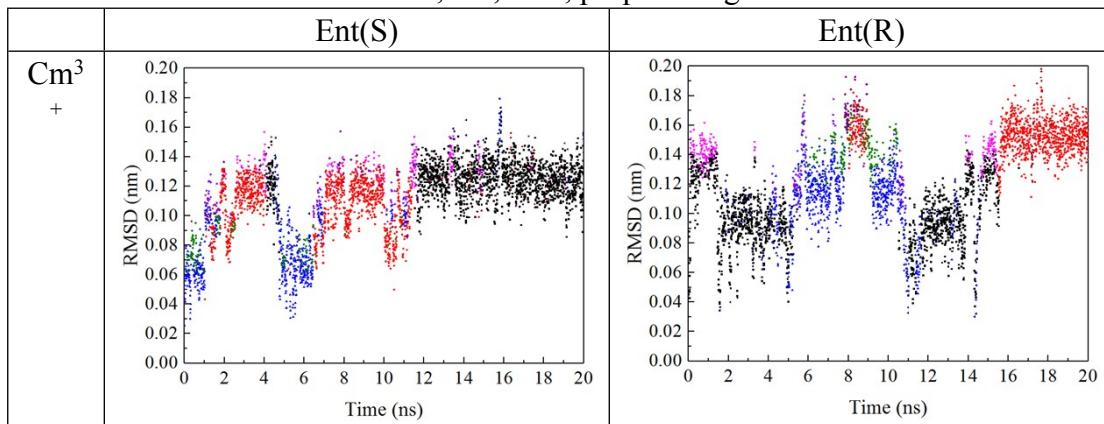

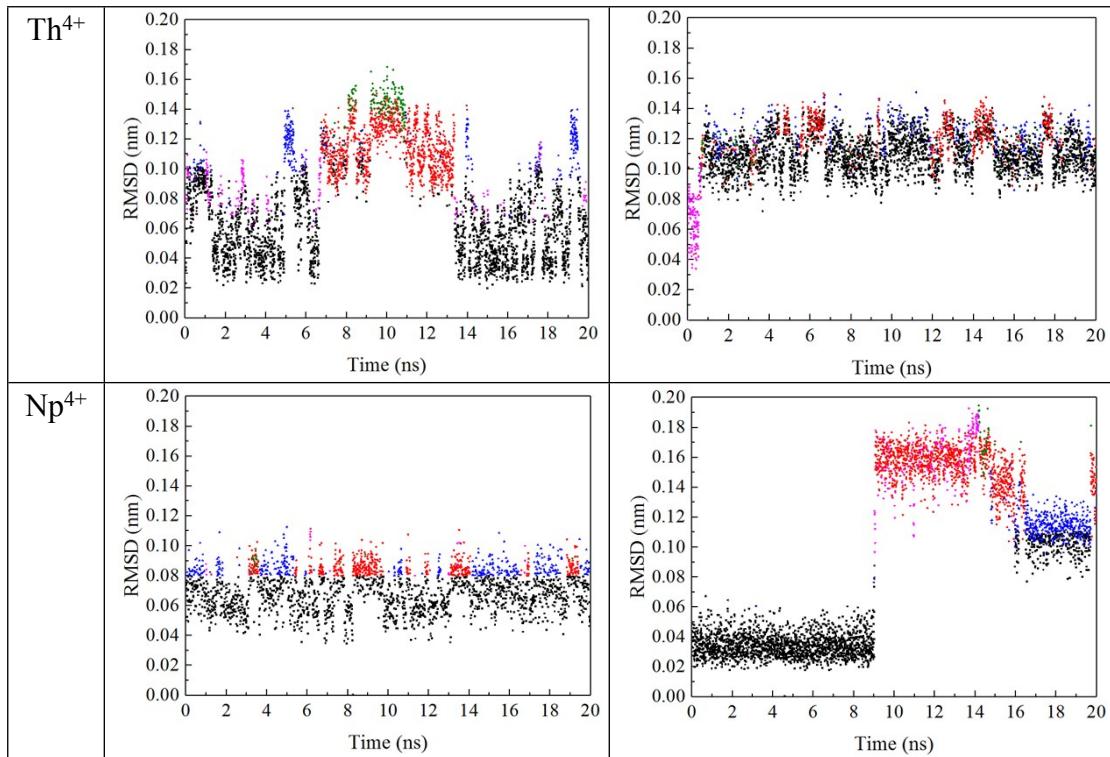

## 7. RMSD for $\text{Cm}^{3+}$ , $\text{Th}^{4+}$ , $\text{Np}^{4+}$ -Ent complex

**Table S6.** Time evolution of positional RMSD of non-hydrogen atoms of  $\text{Cm}^{3+}$ ,  $\text{Th}^{4+}$ ,  $\text{Np}^{4+}$ -Ent(S) (**left**) and  $\text{M}^{3+/4+}$ -Ent(R) (**right**) complexes. The trajectories were colored to show the transitions between conformation clusters according to clustering analysis. The color scheme is according to the rank of the clusters: black, red, blue, purple and green.

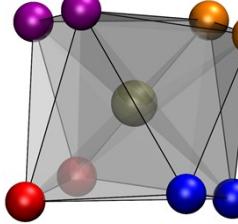

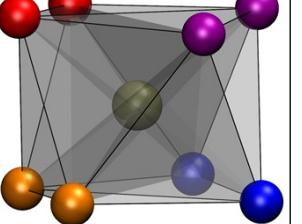

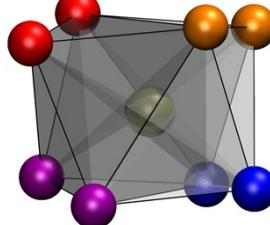

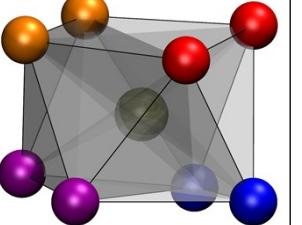

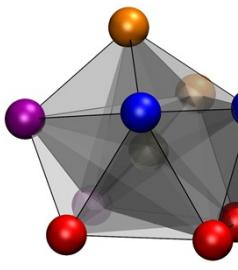

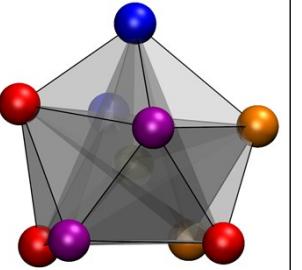

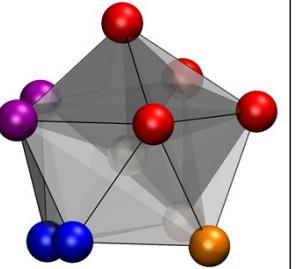

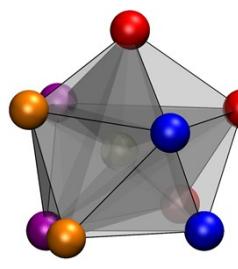

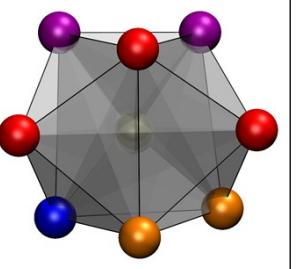

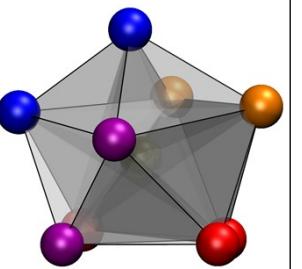

## 8. Polyhedral structures of metal coordination compounds

**Table S7.** The schematic, geometric structures and point group of main polyhedron of  $M^{3+/4+}$ -Ent(R/S) coordination atoms in MD simulations. The coordination atoms of Ent were colored by blue, purple, and orange, while the  $O_{\text{water}}$ s are colored by red. CSAPR, SAPR, and TCTPR mean capped square antiprism, square antiprism, and tricapped trigonal prism stereochemistry structures, respectively.

	Ent(S)		Ent(R)			
	stereoc hemistr y	poi nt gro up			stereoc hemistr y	poin t gro up
$\text{Fe}^{3+}$		octahedr on	$O_h$		octahedr on	$O_h$
$\text{Am}^{3+}$		CSAPR	$C_{4v}$		CSAPR	$C_{4v}$

		SAPR	$D_{4d}$		SAPR	$D_{4d}$
$Cm^3$ +		SAPR	$D_{4d}$		SAPR	$D_{4d}$
$Th^{4+}$		CSAPR	$C_{4v}$		CSAPR	$C_{4v}$
					Bicappe d dodeca hedron	$D_2$
$U^{4+}$		CSAPR	$C_{4v}$		TCTPR	$D_{3h}$
					CSAPR	$C_{4v}$

$\text{Np}^{4+}$		TCTPR	$D_{3h}$		CSAPR	$C_{4v}$
		CSAPR	$C_{4v}$			
$\text{Pu}^{4+}$		CSAPR	$C_{4v}$		CSAPR	$C_{4v}$
		TCTPR	$D_{3h}$			

## 9. Evaluation of metal parameters

The force field parameters of the ions were validated before being used in the present study. In the validation (manuscript in preparation), since we could not find the experimental data of the actinide-Ent or actinide-catechol complexes, we have chosen several typical anions, i.e.  $\text{Cl}^-$ ,  $\text{NO}_3^-$ , and  $\text{CO}_3^{2-}$ , which covered mono- and bidentate, mono- and dianionic ligands. The analysis of the conformation (coordination bond length, coordination number) of the complexes of actinides with water and the anions in aqueous phase displayed good agreement with available experimental data. We have also tested the parameters on the interactions between metal ions and deprotonated catechol anion

Below we tabulated the key properties of metal ion in water without (Table S8) and with the presence of ions  $\text{Cl}^-$ ,  $\text{NO}_3^-$ , and  $\text{CO}_3^{2-}$  (Table S9), and deprotonated catechol (Table S10).

**Table S8.** The comparison of experimental values, 12-6-4 type simulated values in SPC/E water model and 12-6 IOD type simulated values in SPC/E water model of properties as IOD, CN, and HFE, respectively.

	$\text{Fe}^{3+}$	$\text{Am}^{3+}$	$\text{Cm}^{3+}$	$\text{Th}^{4+}$	$\text{U}^{4+}$	$\text{Np}^{4+}$	$\text{Pu}^{4+}$
