

Supporting information

Morphological adaptability of graphitic carbon nanofibers to enhance sodium insertion in a diglyme-based electrolyte

Francisco Nacimiento, Marta Cabello, Gregorio F. Ortiz*, Ricardo Alcántara, Pedro Lavela and José L. Tirado

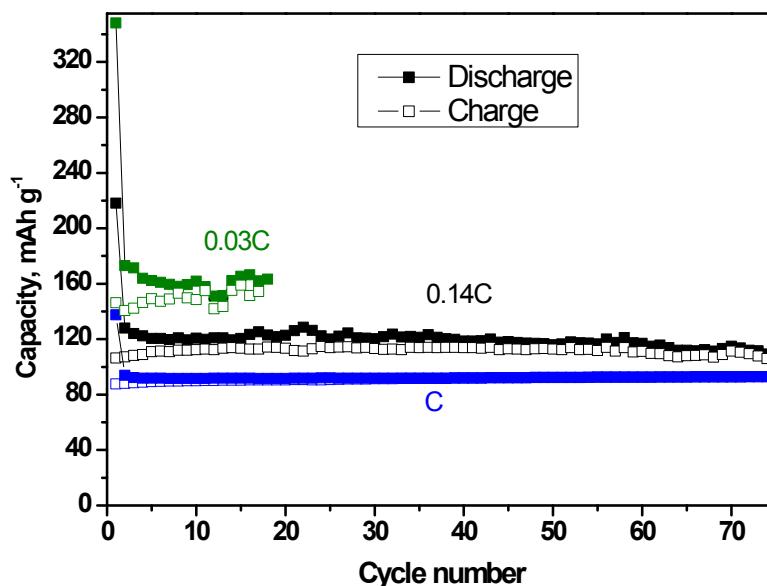

Figure S1. Electrochemical tests for galvanostatic cycling of Na/CNF half cells. The figure represents the Gravimetric capacity versus cycle number at C/7, C/33 C rates. Voltage limits: 0.03-3.0 V.

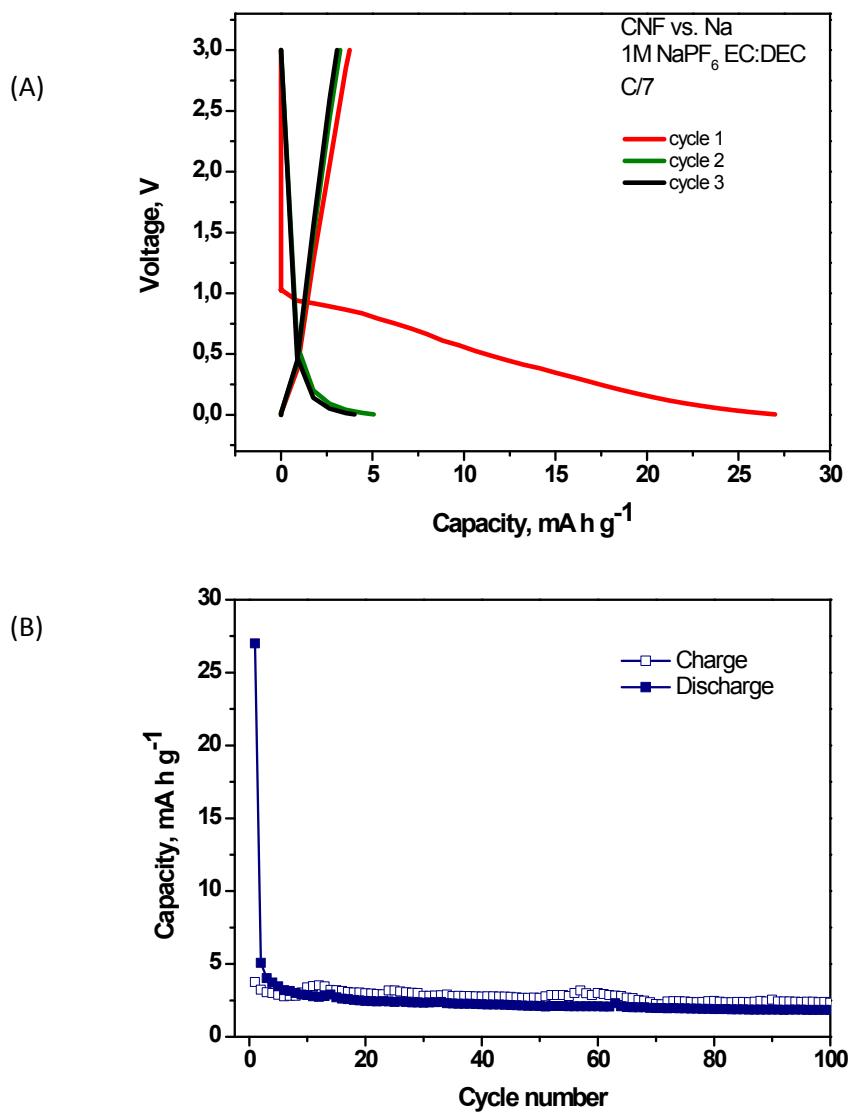

Figure S2. A) Galvanostatic discharge/charge curve of CNF in Na cell using 1M NaPF_6 in EC:DEC electrolyte. B) Its capacity retention
