Supplementary Figure 3 : Proteomic analysis of total cell extracts by 2D electrophoresis

Total cell extracts of RAW274.7 cells were separated by two-dimensional gel electrophoresis. The first dimensions covered a 4-8 pH range and the second dimension a 15-200 kDa range. Total cellular proteins (150 μ g) were loaded on the first dimension gel.

A: gel obtained from control cells.

B: gel obtained from cells treated for 24 hours with 20 μ g/ml silver nanoparticles
C: gel obtained from cells treated for 24 hours with 20 μ g/ml silver nanoparticles and left to recover for 72hours

Only the proteins implied in cellular cytoskeleton (C), DNA metabolism (D) and glycoside metabolims (G) are shown in this figure
