NBW, normal birth weight; IUGR, intrauterine growth retarded; SO, soybean oil; FO, flaxseed oil.

Supplementary Figure 1 Differences on bacterial community diversity and richness among the four treatments. (A) Observed OTUs; (B)Shannon index; (C) Chao1 index; (D) Simpson index; (E) ACE. NBW, normal birth weight; IUGR, intrauterine growth retarded; SO, soybean oil; FO flaxseed oil.

Supplementary figure 2 Comparison of colonic microbial community structures within four experimental groups ($n = 8$ for each group). (A) Non-metric multidimensional scaling (NMDS) based on weighted UniFrac distance among samples of different treatments, based on stress < 0.20 with significantly different abundance among groups (IUGR-FO, NBW-FO, IUGR-SO and NBW-SO). (B) UPGMA tree, all revealing significant differences among treatments based on weighted UniFrac distances of OTU community. NBW, normal birth weight; IUGR, intrauterine growth retarded; SO, soybean oil; FO, flaxseed oil.
