**ICP-MS multi-element measurement procedure:**

Elemental measurements (Li, Be, Na, Mg, Al, P, K, Ca, Sc, Ti, V, Cr, Mn, Fe, Co, Ni, Cu, Zn, As, Rb, Sr, Y, Mo, Rh, Ag, Cd, In, Sb, Te, Cs, Ba, La, Ce, Eu, Tb, Ho, Lu, W, Pt, Hg, Tl, Pb, Bi, Th and U) were realized in sediment digest on our ICP-MS instrument with a conventional Peltier-cooled cyclonic spray chamber as an introduction system. Polyatomic and isobaric interferences were minimized using the collision cell configuration of the kinetic energy discrimination (KED) mode of the instrument with He as a collision gas. Internal standard solution used for that purpose was Indium  $^{115}\text{In}$  ( $5 \mu\text{g L}^{-1}$ ) in 2% v/v  $\text{HNO}_3$ . Measurements of these elements were validated using certified reference materials: IAEA-158, IAEA-314, HISS-1 and PACS-2. Recoveries of all elements of interest in certified reference material were comprised between 80% and 111%.

**Table SI-1.** Concentrations ( $\mu\text{g g}^{-1}$ ) of all elements of interest in the five sediments of this study. Results given in brackets are % recovery compared to certified values.

Element	IAEA-314	IAEA-158	KB-5	RSC	Kaštela
Li, lithium	14.15	30.32 (93)	31.82	53.31	59.42
Be, beryllium	1.60	1.81	1.36	1.87	2.15
Na, sodium	789	22 682 (95)	12 154	17 760	18 164
Mg, magnesium	2 303	10 074 (97)	8 998	10 265	27 456
Al, aluminium	87 629	47 100 (91)	61 362	59 620	56 999
P, phosphorus	600	963	754	619	729

**Table SI-3.** Instrumental operating conditions of the iCAP-Q ICP-MS and the sample

introduction system Apex-Q for radium analysis.

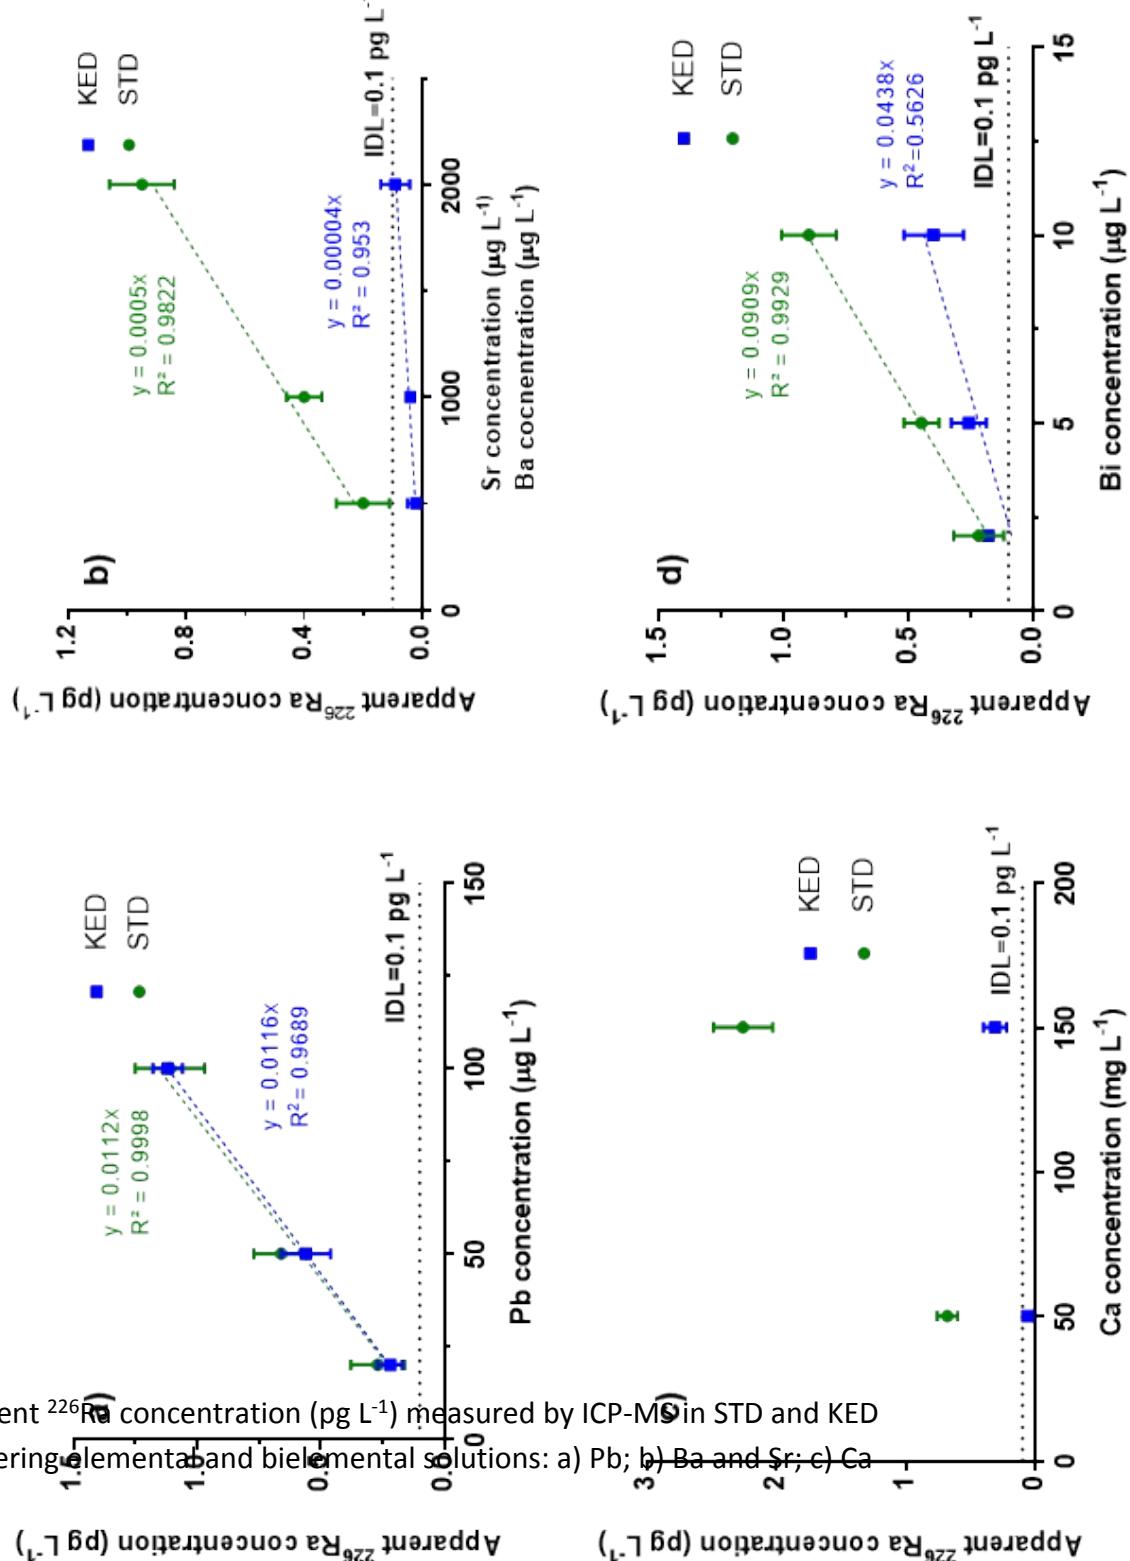

<b>Instrumental parameters</b>	
Cool gas flow	14.00 L min <sup>-1</sup>
Auxiliary gas	0.80 L min <sup>-1</sup>
RF-power	1550 W

Interface cones	Nickel
<b>Ra - Acquisition parameters</b>	
Acquisition runs	5
Number of sweeps	28
Integration time per sweep	2 seconds
Total acquisition time	280 seconds
<b>Ra - Apex-Q parameters</b>	
Heated Cyclonic Spray Chamber	100°C
Peltier Cooled Multipass Condenser	2°C
He flow rate	
STD mode	0 mL min <sup>-1</sup>
KED mode	4.2 mL min <sup>-1</sup>
Nitrogen. N <sub>2</sub>	Off
Sample uptake rate	0.37 mL min <sup>-1</sup>
Internal standard uptake rate	0.19 mL min <sup>-1</sup>

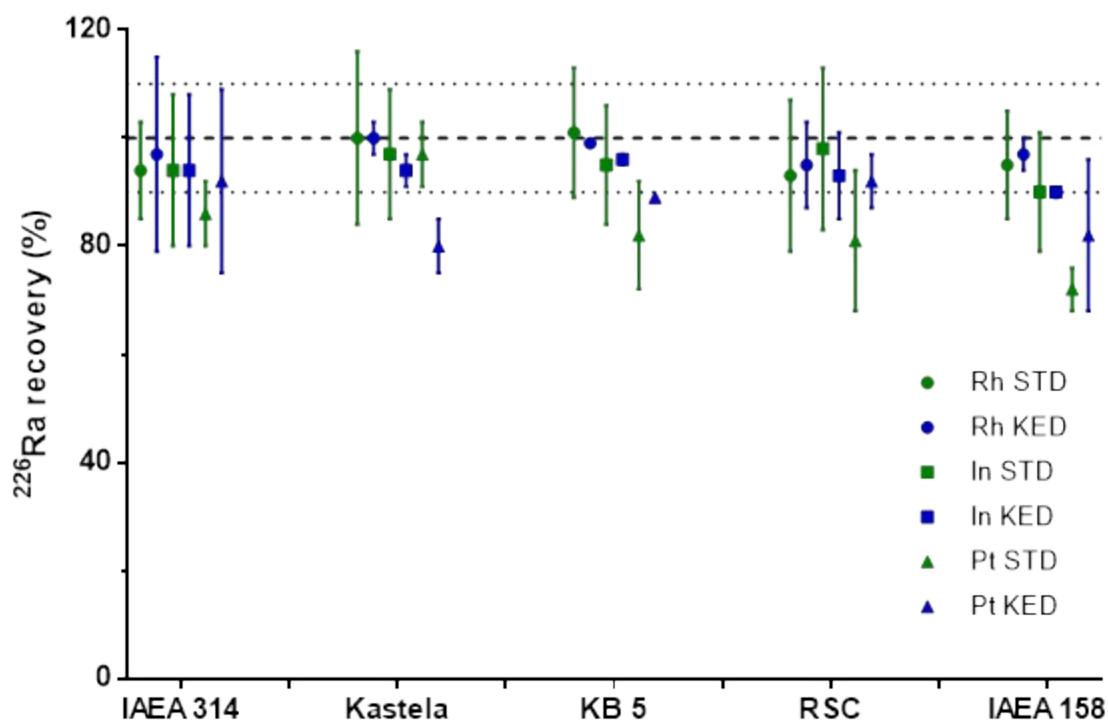

**Table SI-4.** Relative standard deviation (RSD) on <sup>226</sup>Ra concentration measured by ICP-MS in STD and KED mode using <sup>115</sup>In as internal standard based on n sediment replicate mineralization and a matrix matched correction for polyatomic interference.

	STD		KED	
sediment	n	RSD (%)	n	RSD (%)

<b>IAEA-314</b>	5	4.6	9	4.3
<b>Kaštela</b>	3	4.5	3	5.1
<b>RSC</b>	-	-	3	16.7
<b>IAEA-158</b>	3	15.2	-	-

**Figure SI-1.** Apparent  $^{226}\text{Ra}$  concentration ( $\text{pg L}^{-1}$ ) measured by ICP-MS in STD and KED modes from interfering elemental and bi-elemental solutions: a) Pb; b) Ba and Sr; c) Ca and W; and d) Bi

**Figure SI-2.**  $^{226}\text{Ra}$  spike recoveries (% mean  $\pm 1\text{ SD}$ ;  $n = 2 - 3$ ) measured in both STD and KED modes using  $^{103}\text{Rh}$ ,  $^{115}\text{In}$  or  $^{195}\text{Pt}$  as internal standards after sediment mineralization.
