

Electronic Supplementary Information

**A highly selective and light-up red emissive fluorescent probe for
imaging of penicillin G amidase in *Bacillus cereus***

Table of Content

Characterizations of compound 2 , HCyNB and HCyN	S3-S6
HRMS spectrum of HCyNB after incubation with PGA	S7
Time courses of fluorescence intensity of HCyNB in the presence of PGA.....	S7
Stability of HCyNB.....	S7
Lineweaver-Burk plot for the enzyme-catalyzed reaction	S8
Confocal fluorescence microscope images of HCyNB in <i>Bacillus cereus</i>	S8
Average PL intensity of HCyNB in CMCCB 63301 vs the concentration of PGA inhibitor	S9

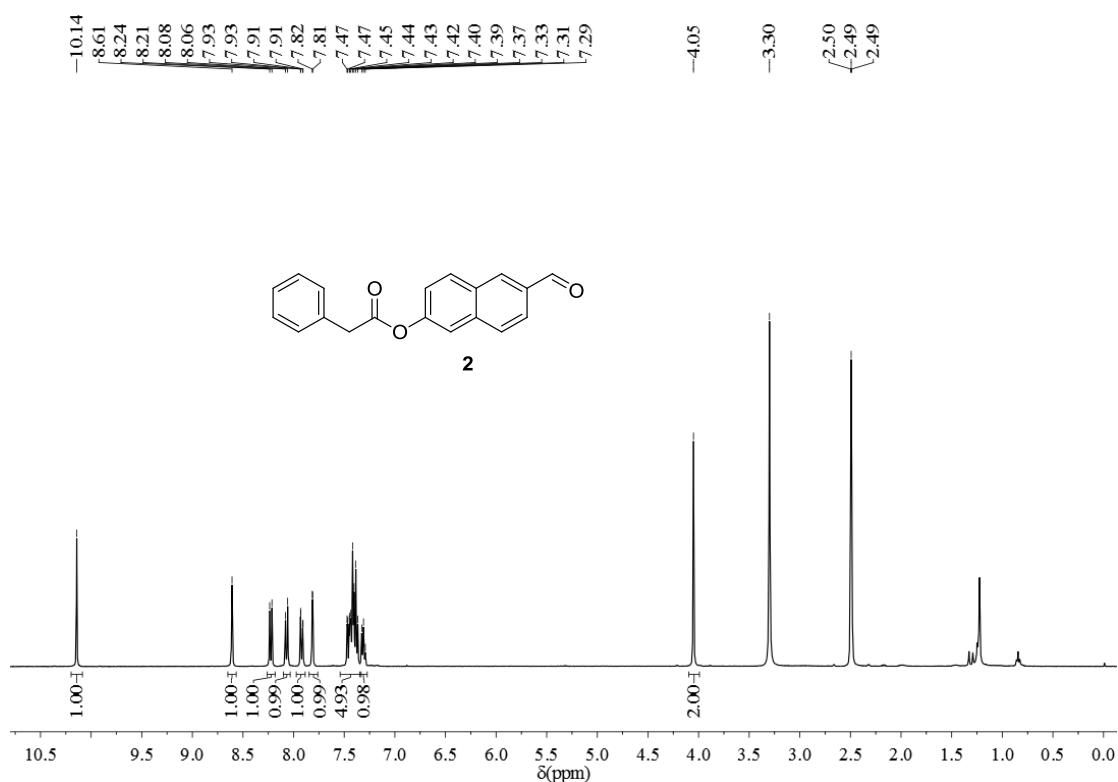

Fig. S1. ¹H NMR of 6-formylnaphthalen-2-yl acetate (compound 2) in *d*₆-DMSO.

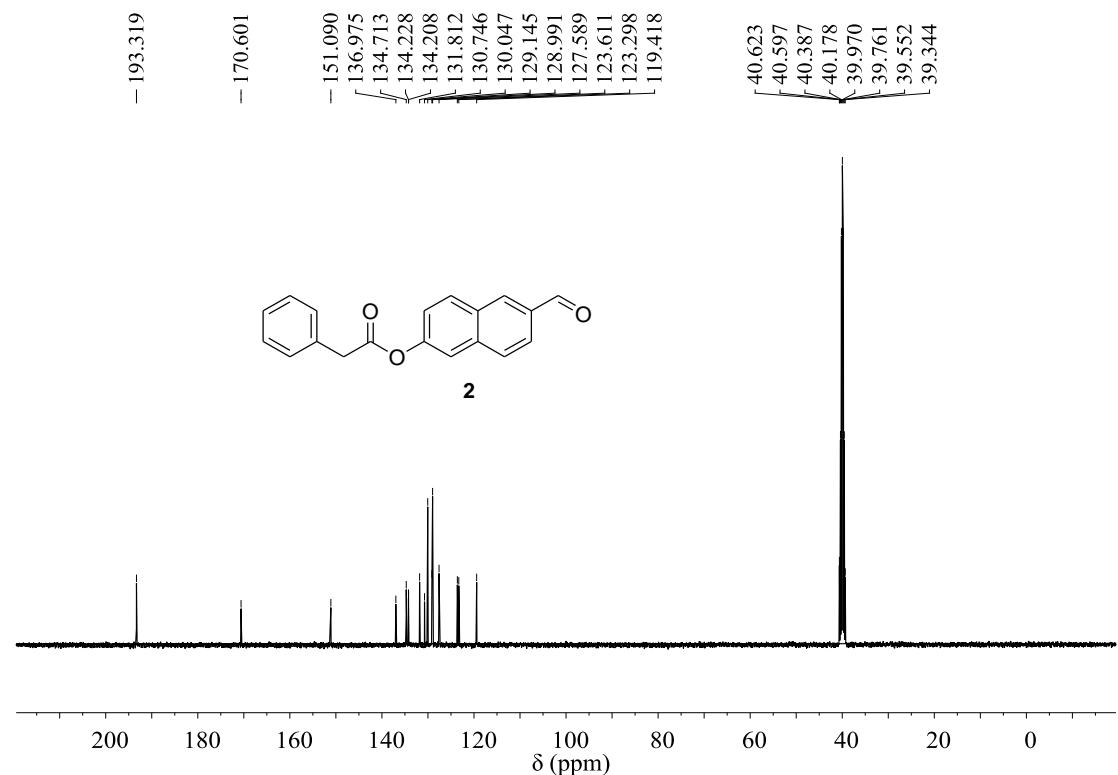

Fig. S2. ¹³C NMR of 6-formylnaphthalen-2-yl acetate (compound 2) in *d*₆-DMSO.

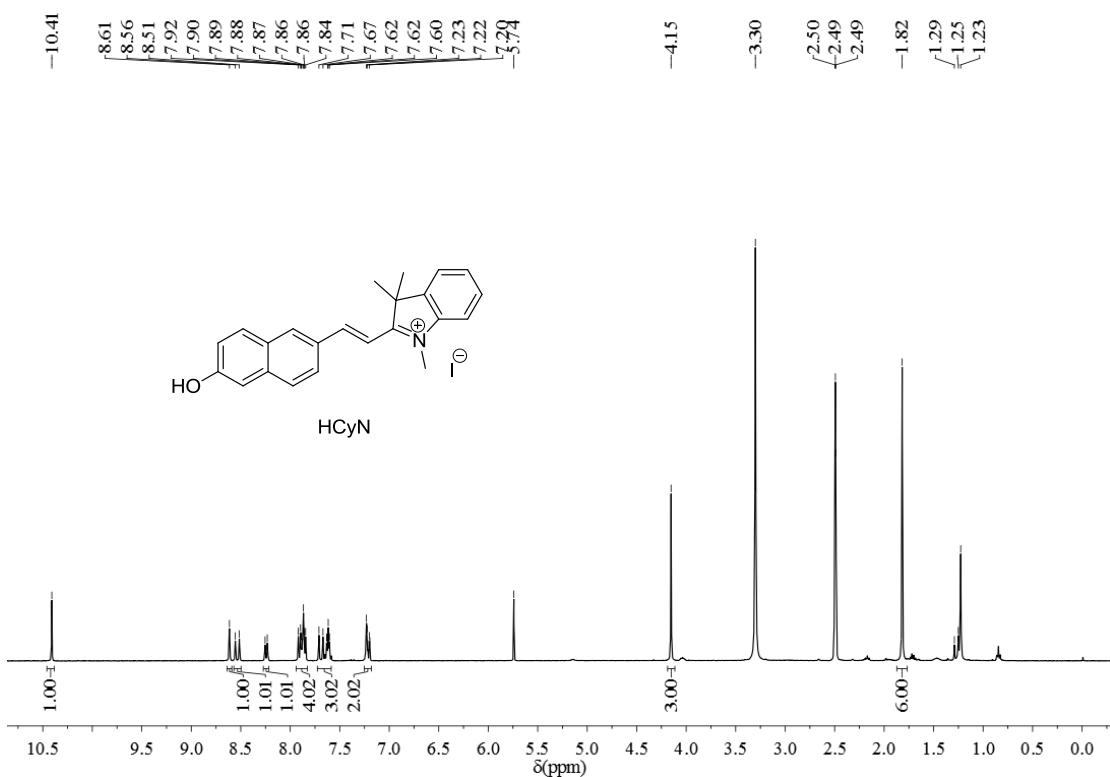

Fig. S3. ^1H NMR of HCyN in d_6 -DMSO.

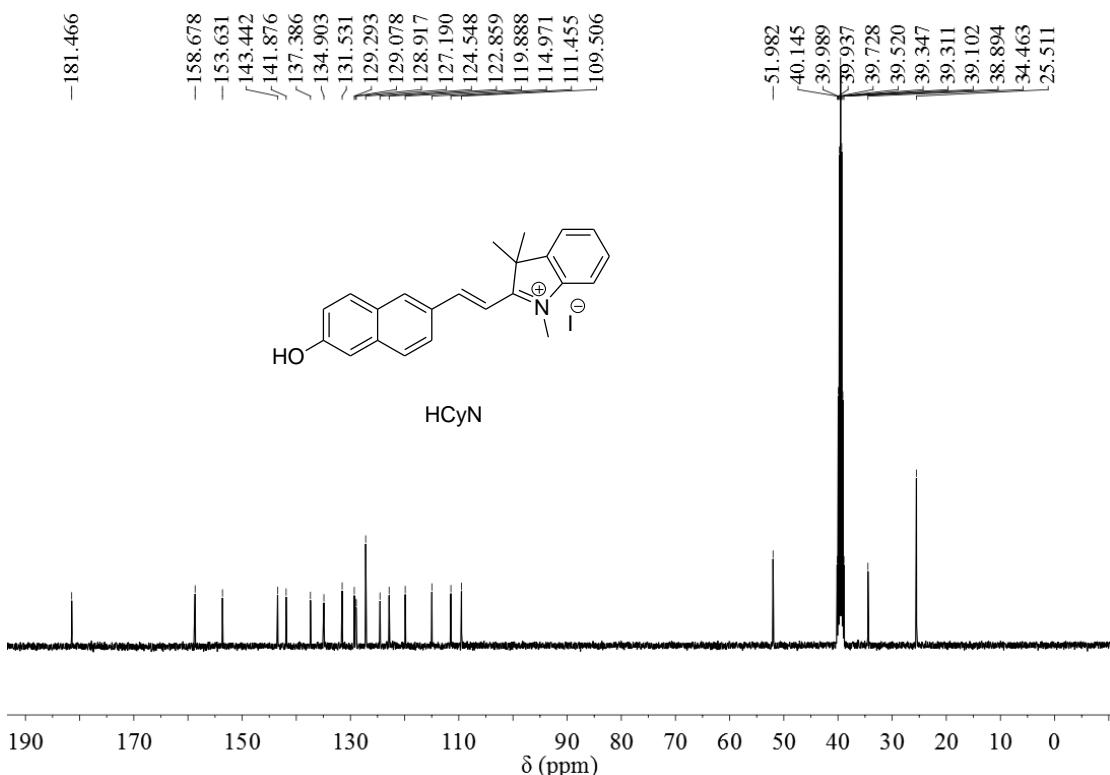

Fig. S4. ^{13}C NMR of HCyN in d_6 -DMSO.

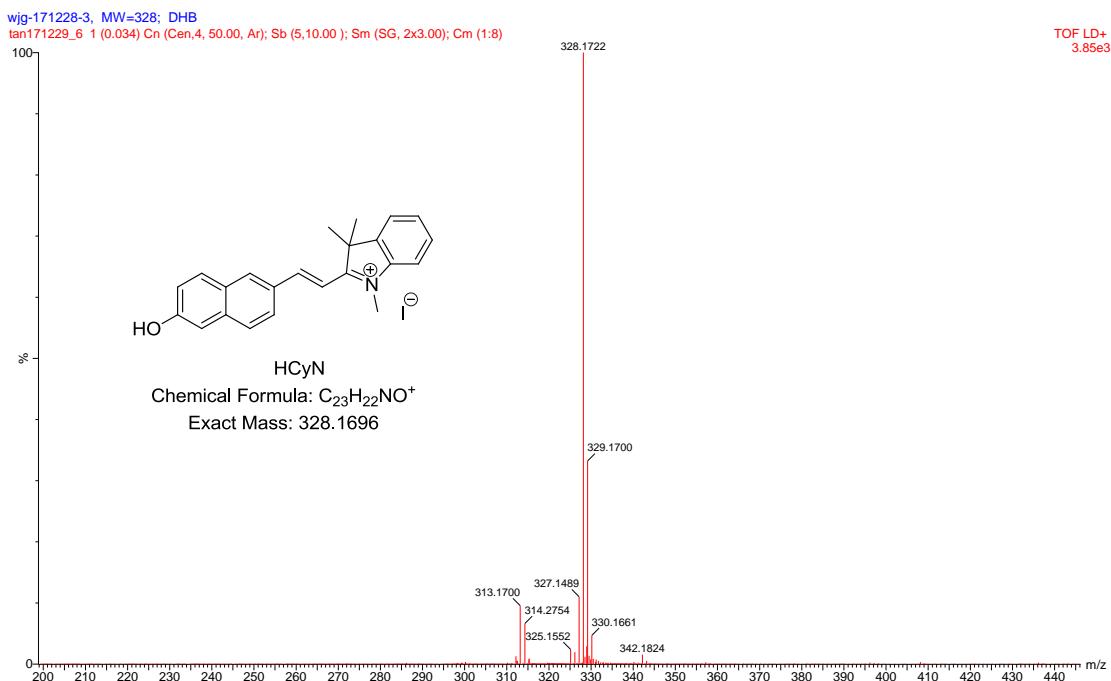

Fig. S5. HRMS spectrum of HCyN.

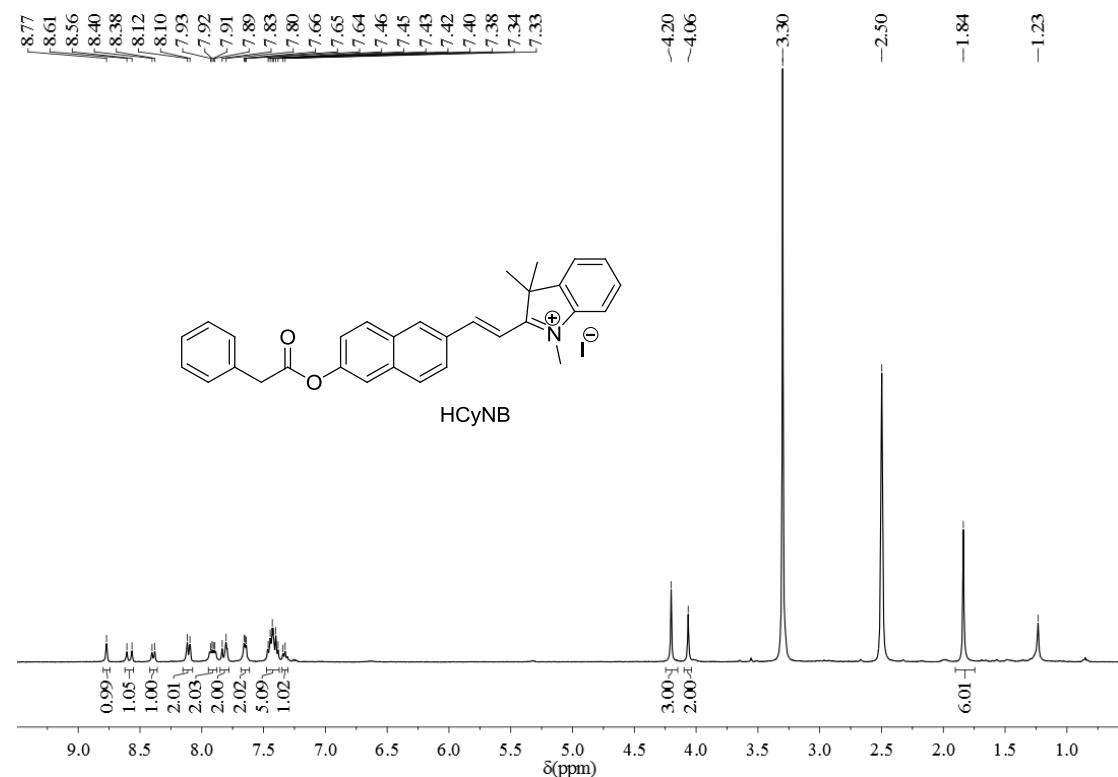

Fig. S6. 1H NMR of HCyNB in d_6 -DMSO.

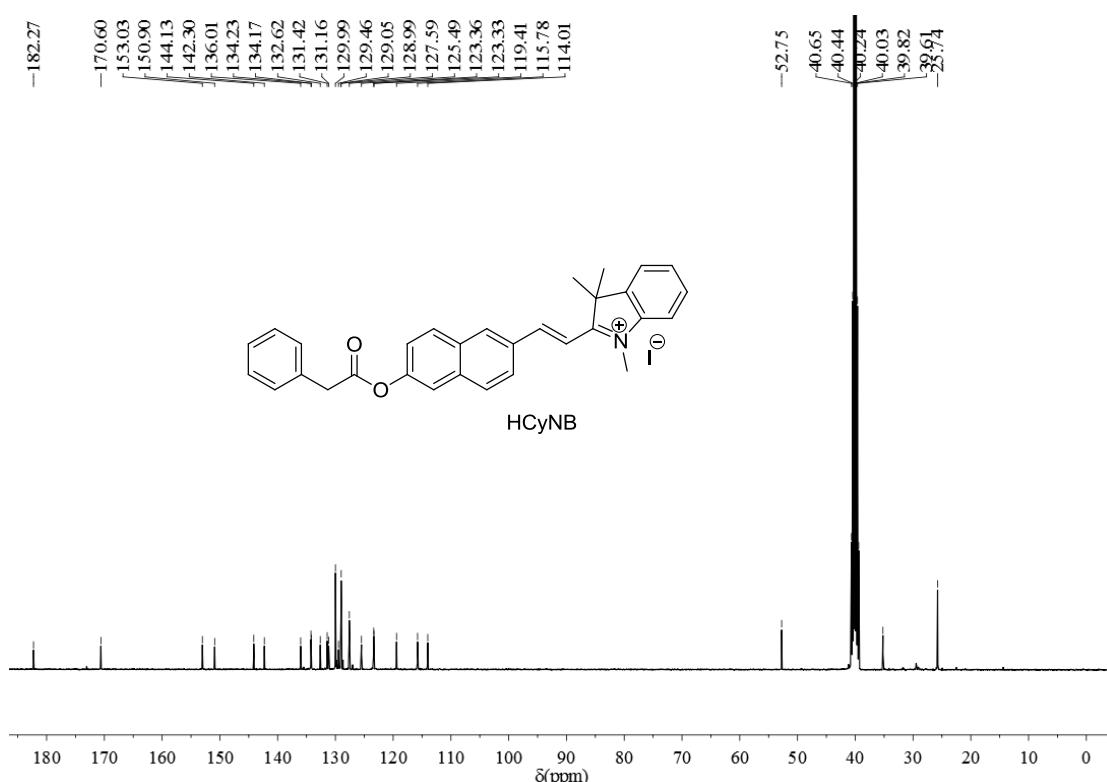

Fig. S7. ^{13}C NMR of HCyNB in d_6 -DMSO.

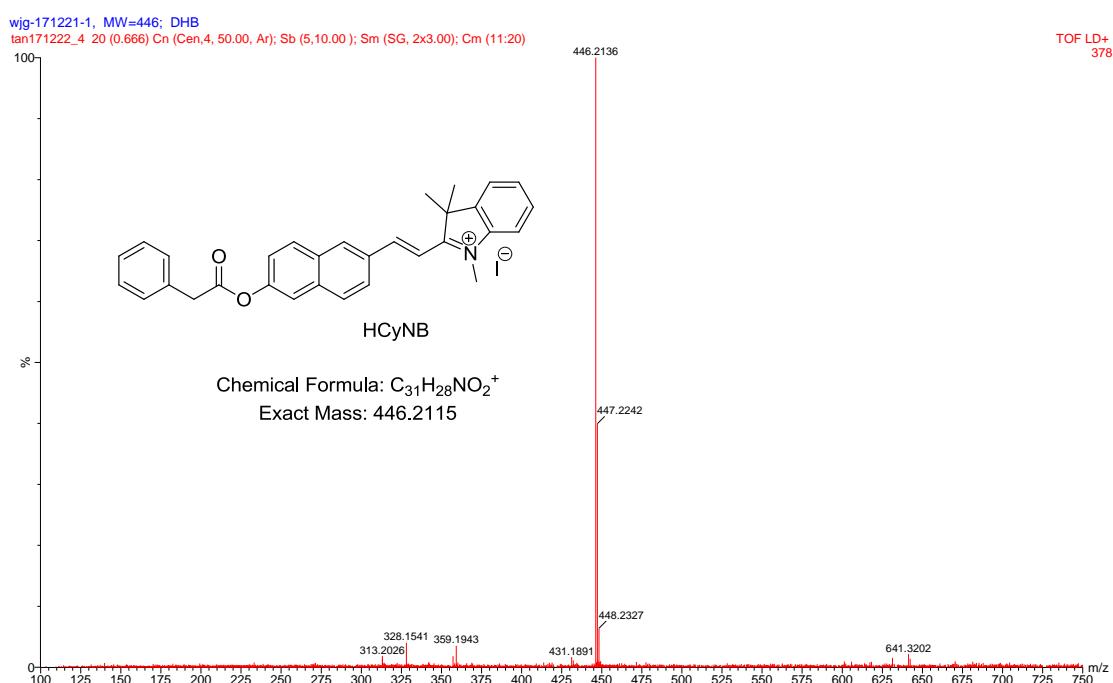

Fig. S8. HRMS spectrum of HCyNB.

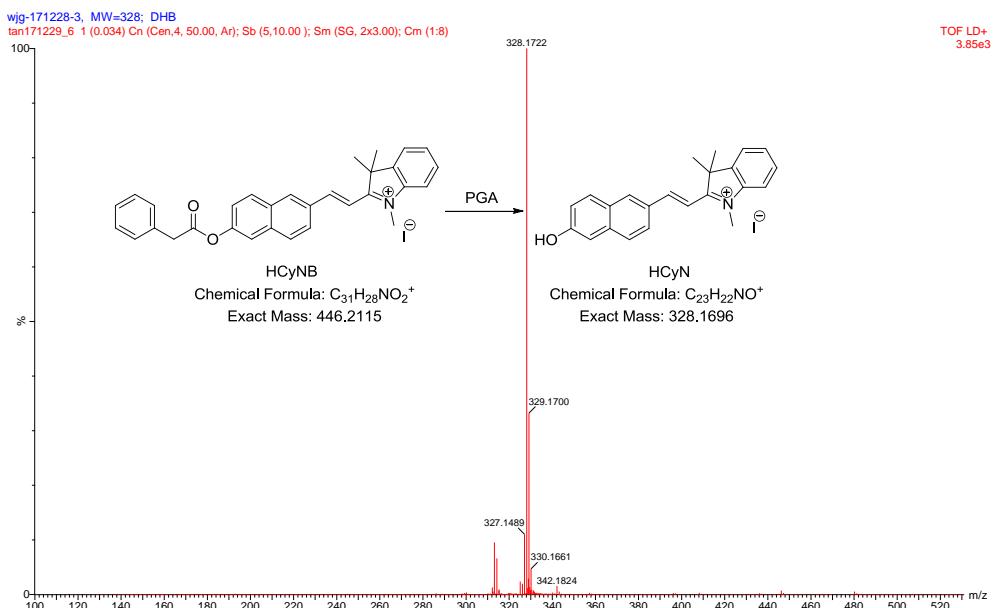

Fig. S9. HRMS spectrum of HCyNB after incubation with PGA (0.1 U/mL) for 15 min at 37 °C.

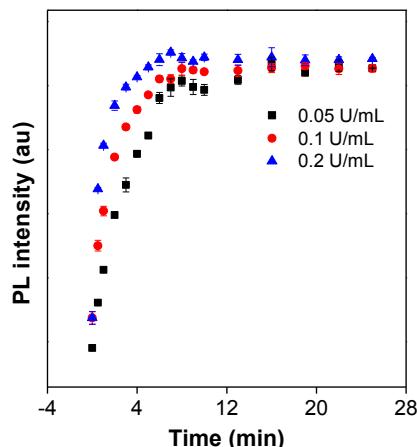

Fig. S10. The fluorescence intensity at 593 nm of HCyNB (10 μ M) incubated with different concentrations of PGA as a function of time. ($E_{\text{ex}} = 443$ nm).

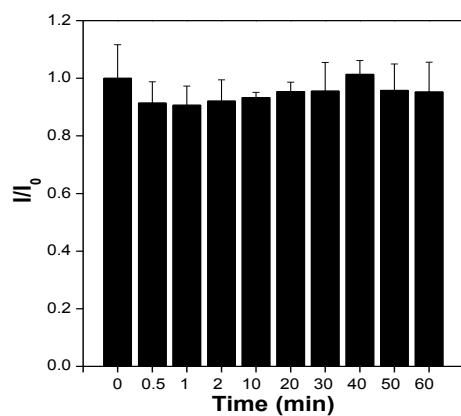

Fig. S11. Stability of HCyNB. I_t/I_0 is the fluorescence intensity ratio at 570 nm after and before t-minute incubation at 37 °C.

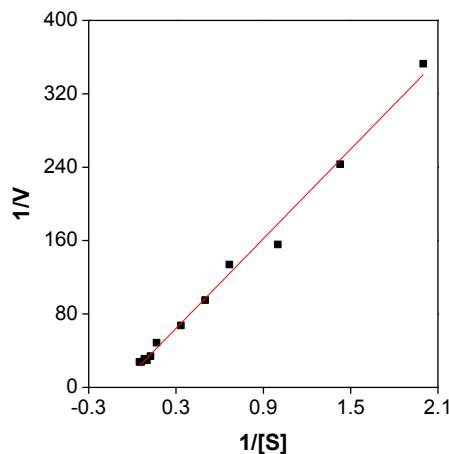

Fig. S12. Lineweaver-Burk plot for the enzyme-catalyzed reaction. The Michaelis-Menten equation was described as: $V=V_{\max}[S]/(K_m+[S])$, where V is the reaction rate, $[S]$ is the concentration of the probe HCyNB, and K_m is the Michaelis constant. Points were fitted using a linear regression model (correlation coefficient $R^2 = 0.992$). $Y=162.73X+15.56$.

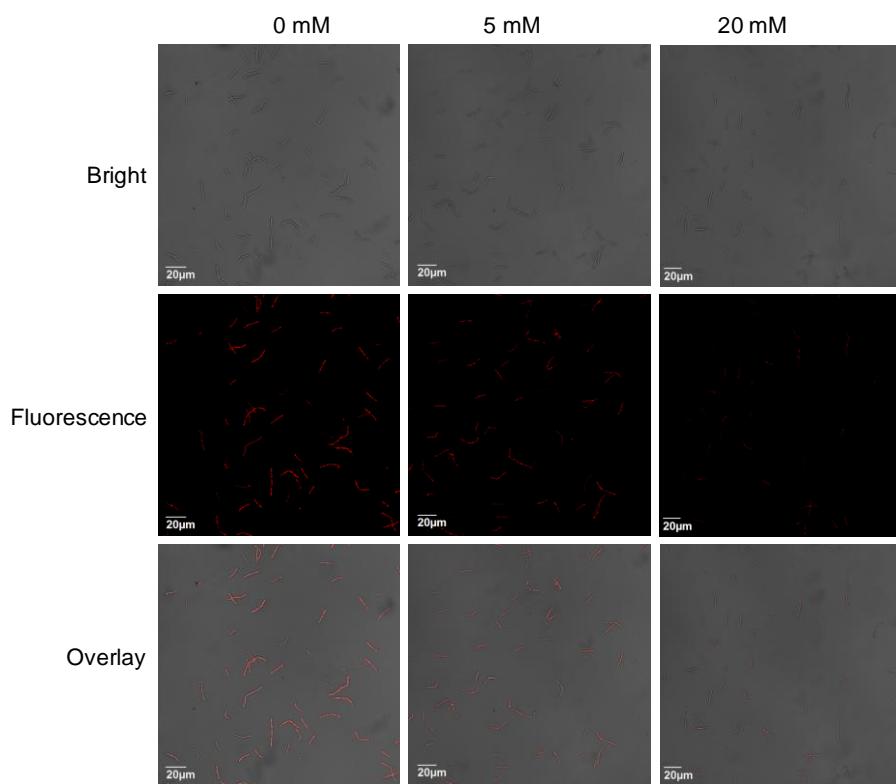

Fig. S13. Confocal fluorescence microscope images of HCyNB in penicillinase-producing *Bacillus cereus* strain CMCCB 63301 in the presence of different concentrations (0, 5 and 20 mM) of PGA inhibitor (penicillin G sodium salt).

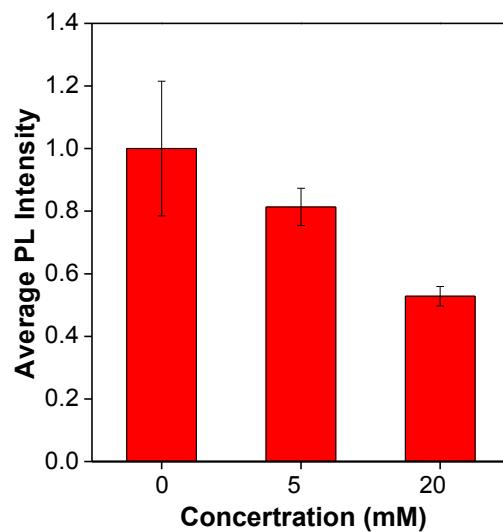

Fig. S14. Average PL intensity of probe HCyNB in penicillinase-producing *Bacillus cereus* strain CMCCB 63301 *vs* the concentration of PGA inhibitor.
