**Fig. S1.** Powder XRD patterns of (a) GO, (b) rGO, and (c) GH. The rGO and GH was obtained by hydrothermal treatment of GO in aqueous solution at 120 and 150 °C for 12 h, respectively.

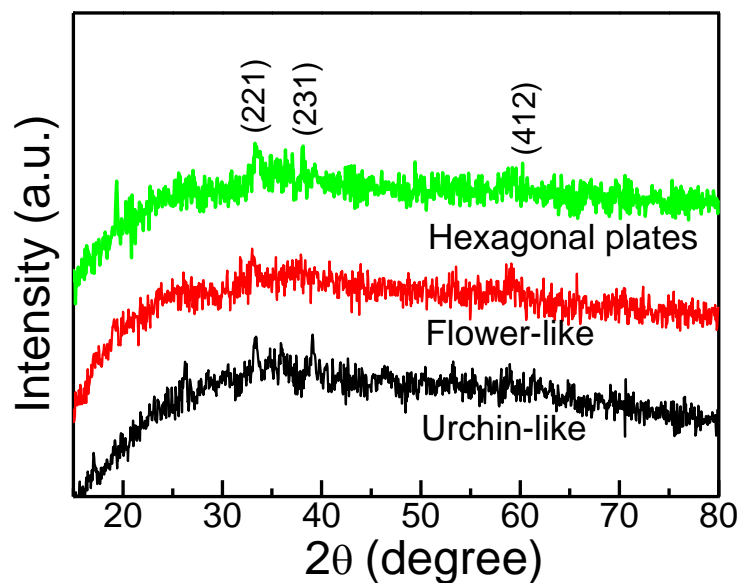

**Fig. S2.** FESEM images of the as-synthesized (a,b) GO, (c,d) rGO, and (e,f) GH. Insets of (c) and (e) show photographs of the corresponding product.

**Fig. S3.** FESEM images of the as-synthesized product at low magnifications obtained by microwave-assisted hydrothermal method at 120 °C.

**Fig. S4.** FESEM images of the as-synthesized product obtained by microwave-assisted hydrothermal method at 150 °C. The red color arrow mark in (b) indicates 2D flake-like structure.

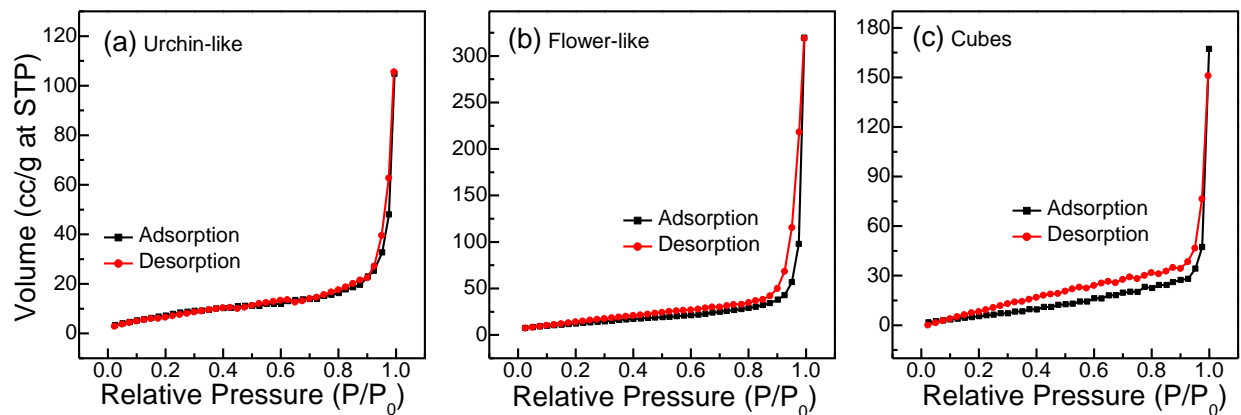

**Fig. S5.** Powder XRD patterns of the as-synthesized products obtained by varying the reaction temperature to form different shapes such as urchin-like (120 °C), flower-like (180 °C) and hexagonal plates (200 °C) with other reaction parameters fixed, i.e., 250 W for 30 min and cobalt and urea molar concentration at 0.1 M. The XRD pattern is matched with JCPDS file 48-0083 for cobalt carbonate hydroxide hydrate  $[\text{Co}(\text{CO}_3)_{0.5}(\text{OH})\cdot 0.11\text{H}_2\text{O}]$

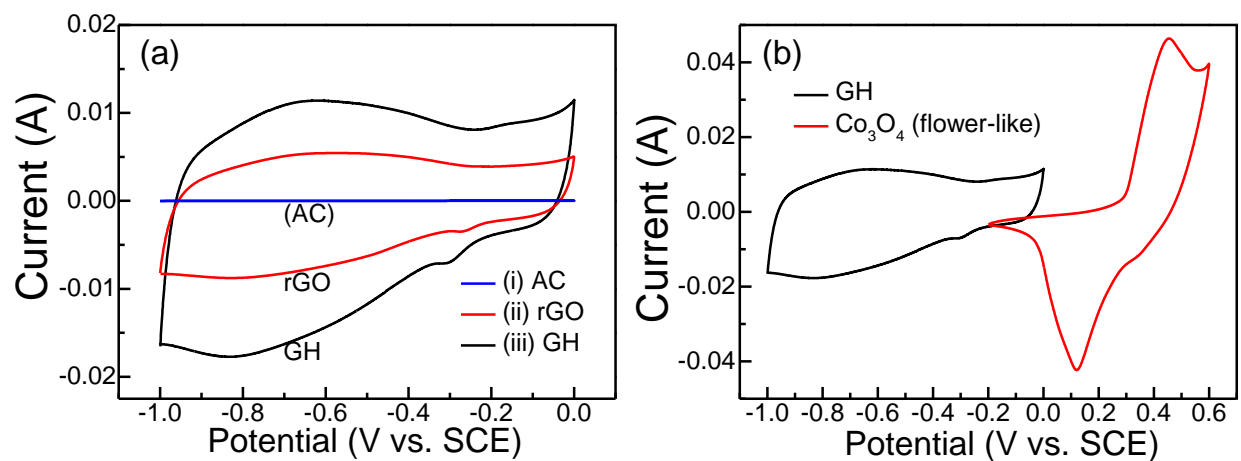

**Fig. S6.** Powder XRD patterns of the products obtained by varying the microwave power and then annealed at 500 °C under air for 3 h.

**Fig. S7.** FESEM images of the samples annealed at 500 °C for 3 h. These samples were synthesized by microwave-assisted hydrothermal method by varying the reaction temperature (a,b) 120 °C and (c,d) 180 °C (0.1 M precursors, 400 W 30 min). The images shown in (e,f) were synthesized at 0.01 M precursors at 400 W and 180 °C for 30 min.

**Fig. S8.** The  $N_2$  adsorption-desorption isotherms of (a) urchin-like, (b) flower-like, and (c) cube morphology of  $Co_3O_4$ .

**Fig. S9.** (a) Cyclic voltammograms of (i) AC, (ii) rGO, and (iii) GH at  $10 \text{ mV s}^{-1}$ . (b) Cyclic voltammograms of GH and flower-like  $Co_3O_4$  in different potential windows.

**Fig. S10.** Photographs on powering small devices using the fabricated  $\text{Co}_3\text{O}_4//\text{GH}$  ASC device.

Table S1. Comparison on the Supercapacitor Performance of the Reported  $\text{Co}_3\text{O}_4$  based Materials
