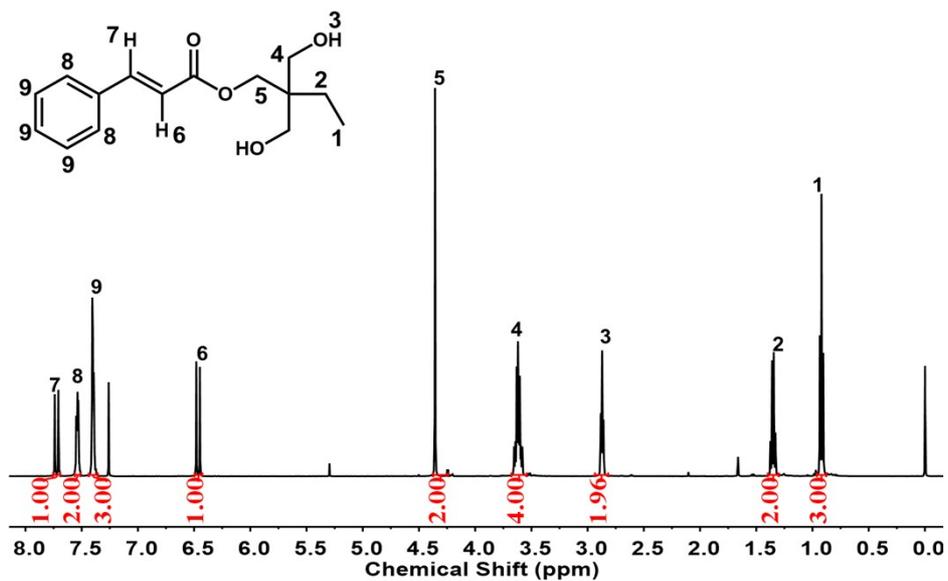

Figure S1. <sup>1</sup>H NMR spectra of CTMP.

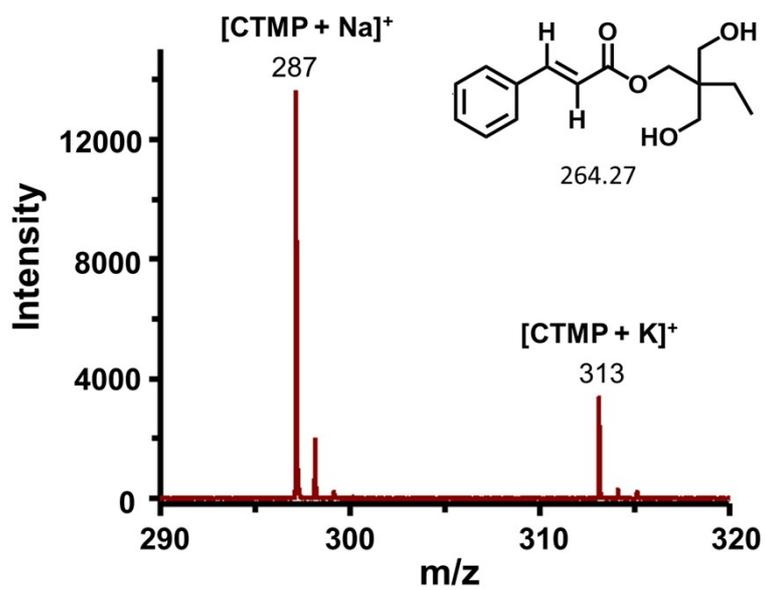

Figure S2. MALDI-TOF spectra of CTMP.

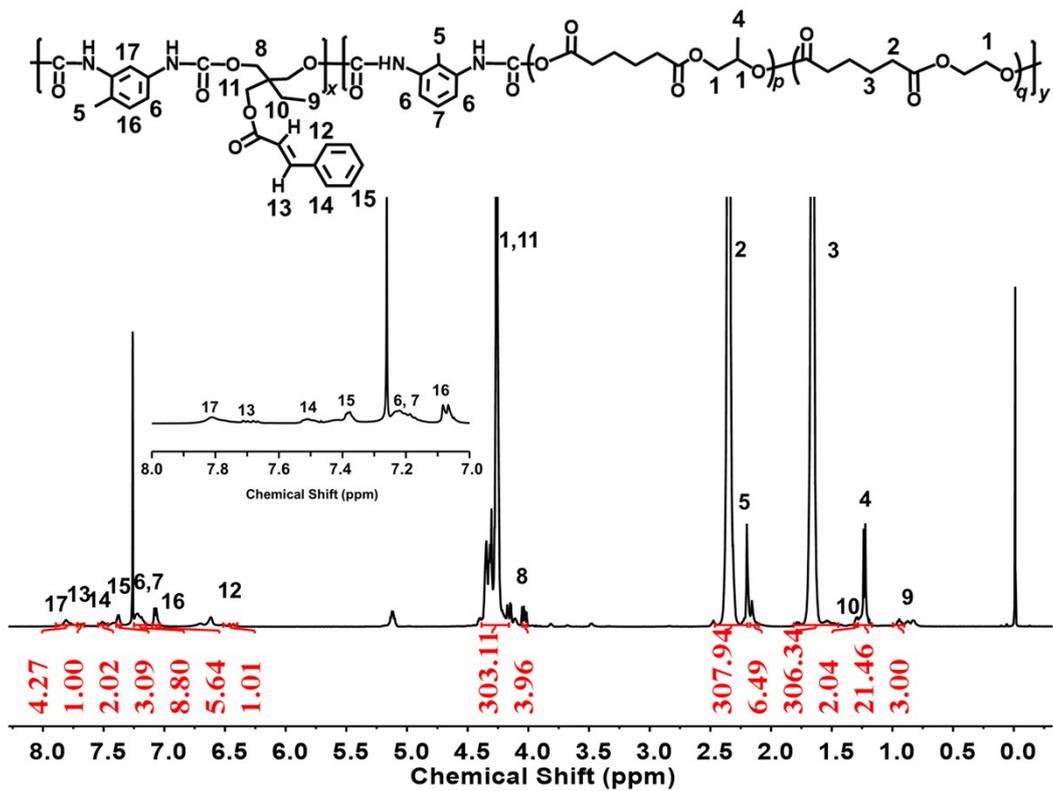

Figure S3.  $^1\text{H}$  NMR spectra of  $C_2$ -PU.

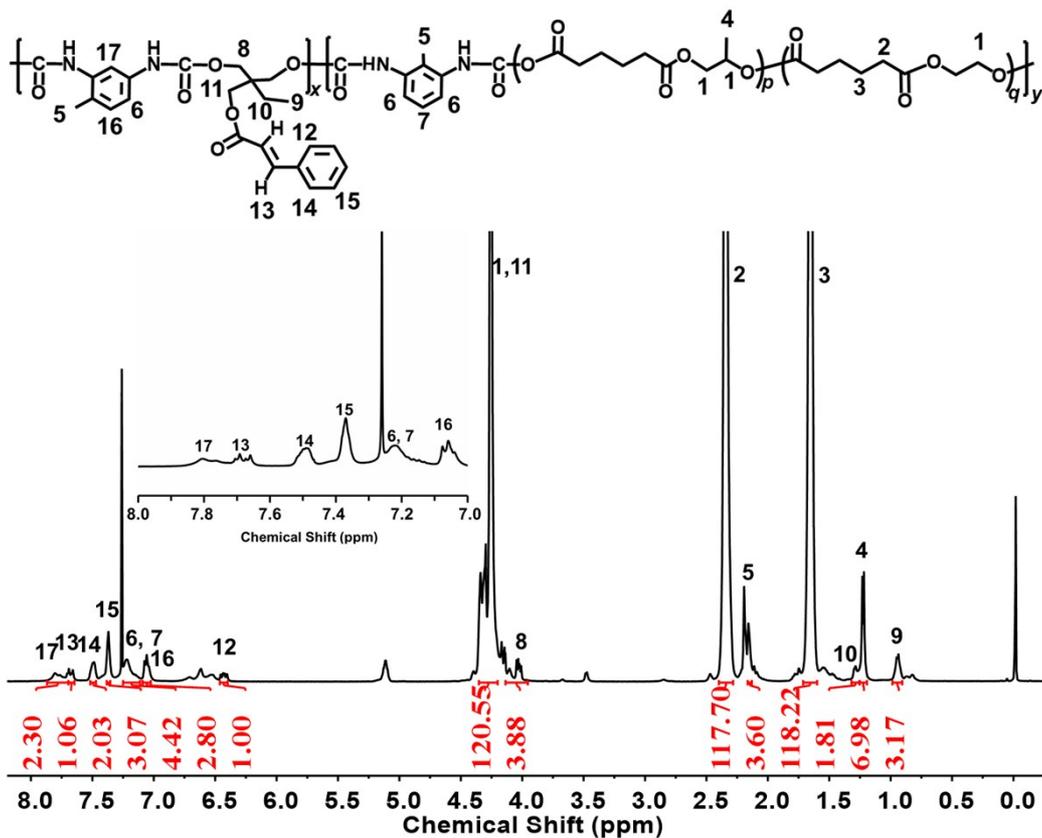

Figure S4.  $^1\text{H}$  NMR spectra of  $C_5$ -PU.

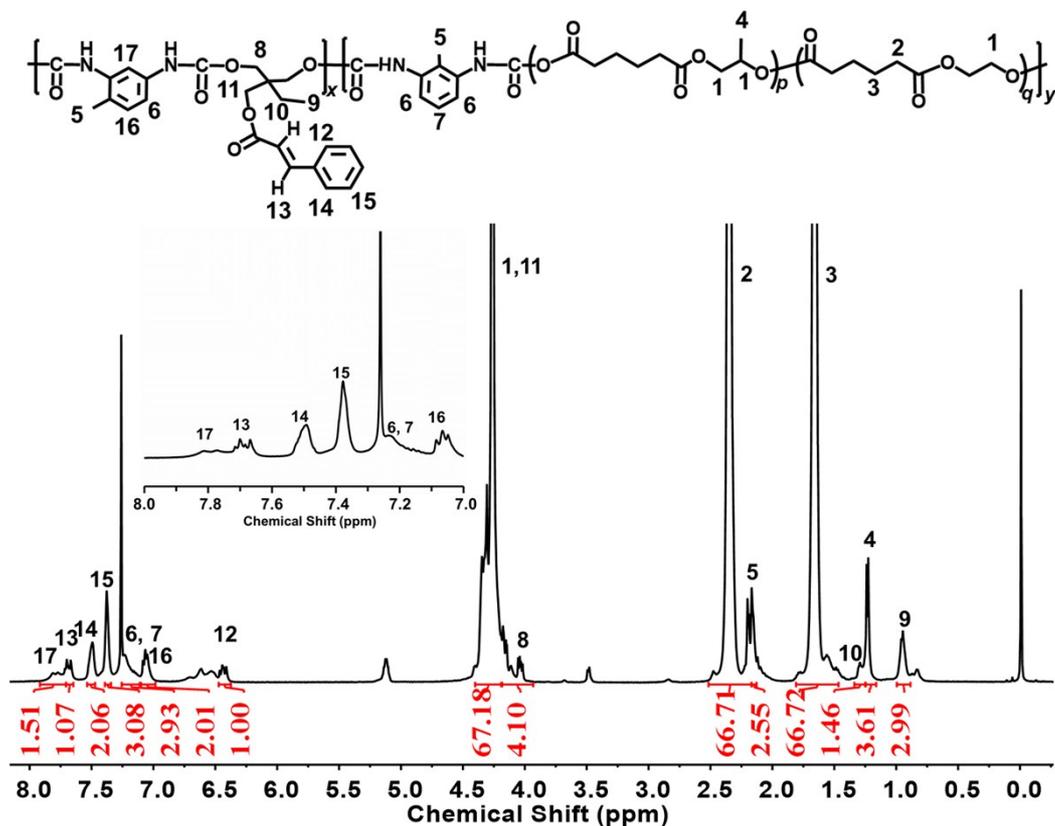

Figure S5. <sup>1</sup>H NMR spectra of C<sub>8</sub>-PU.

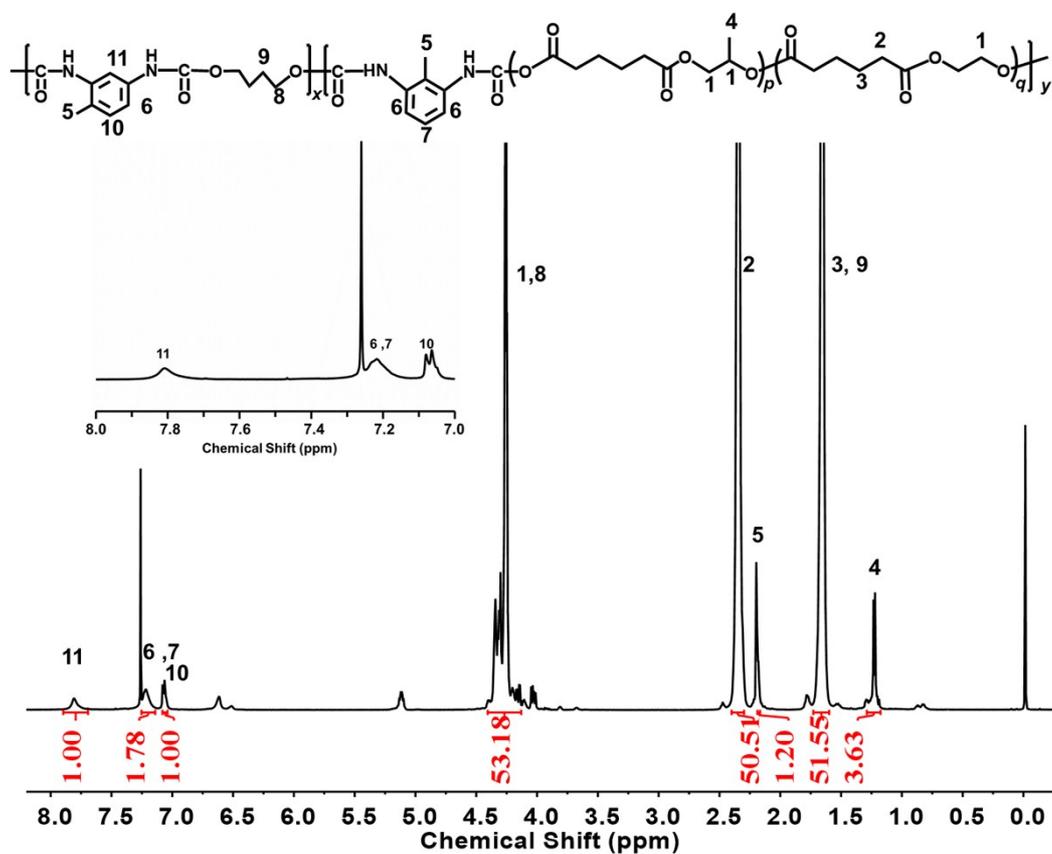

Figure S6. <sup>1</sup>H NMR spectra of B<sub>2</sub>-PU.

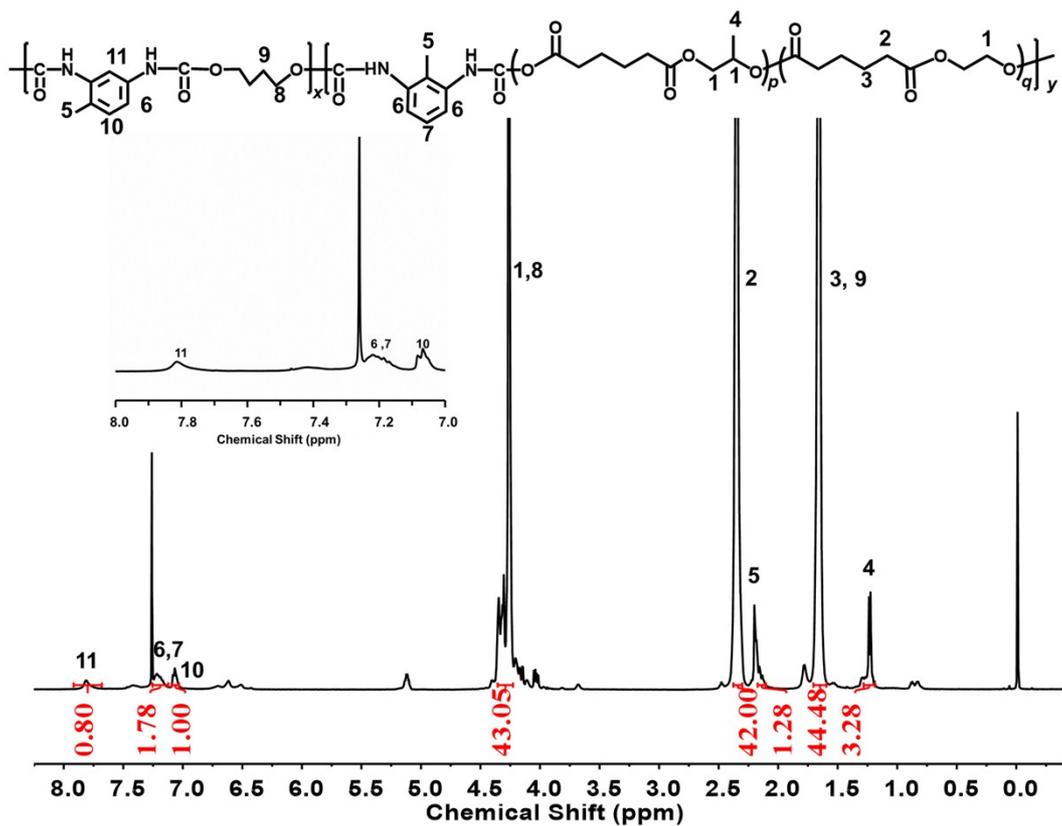

Figure S7. <sup>1</sup>H NMR spectra of B<sub>5</sub>-PU.

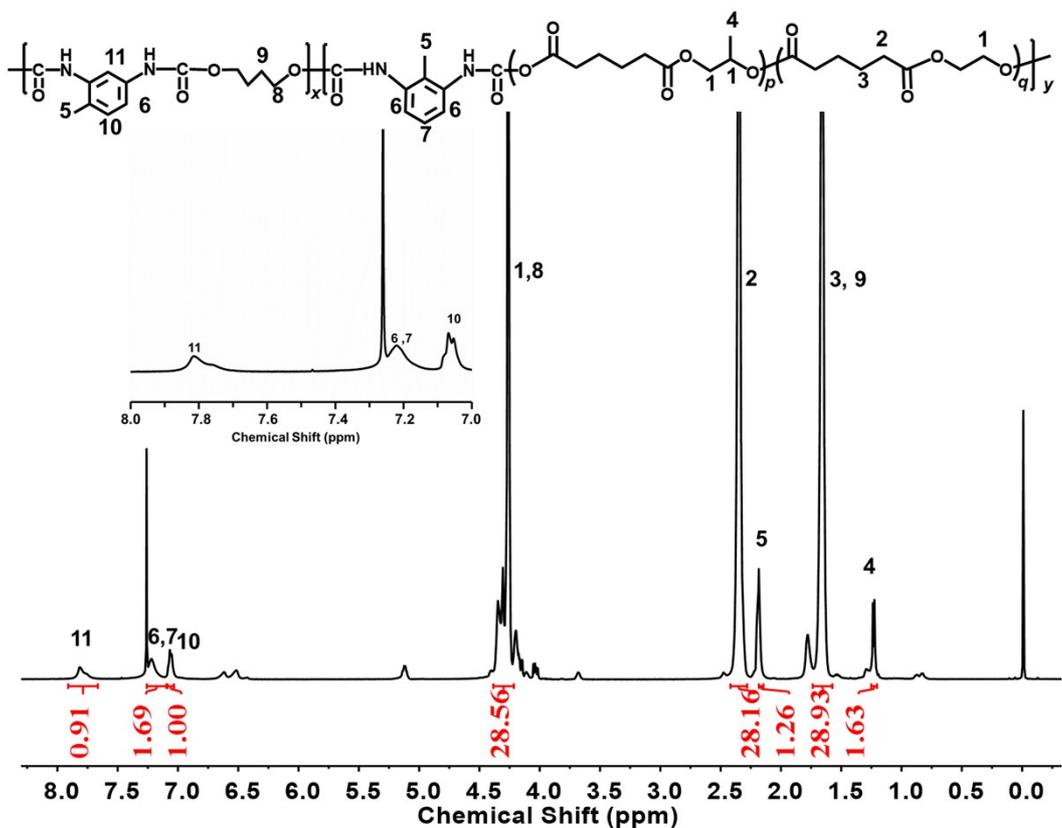

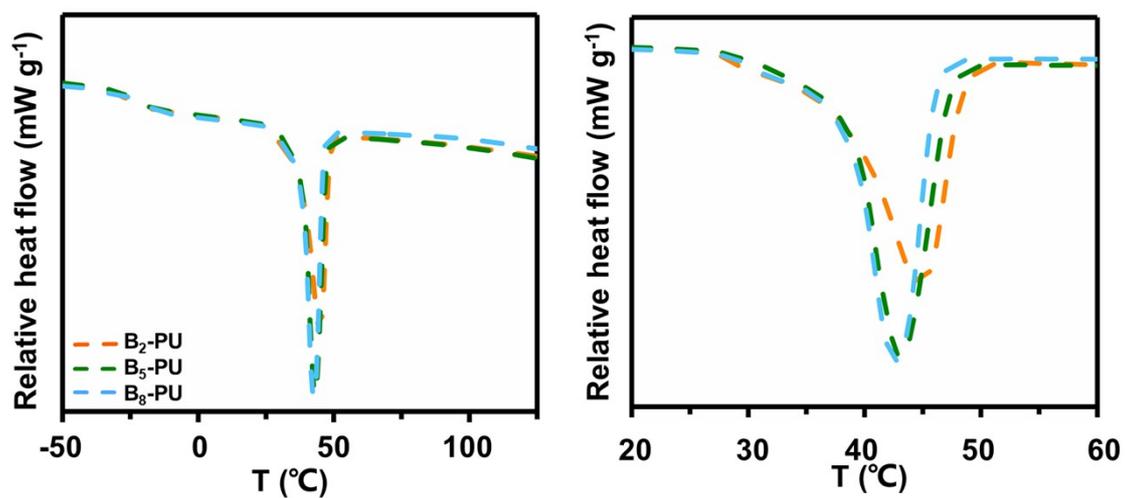

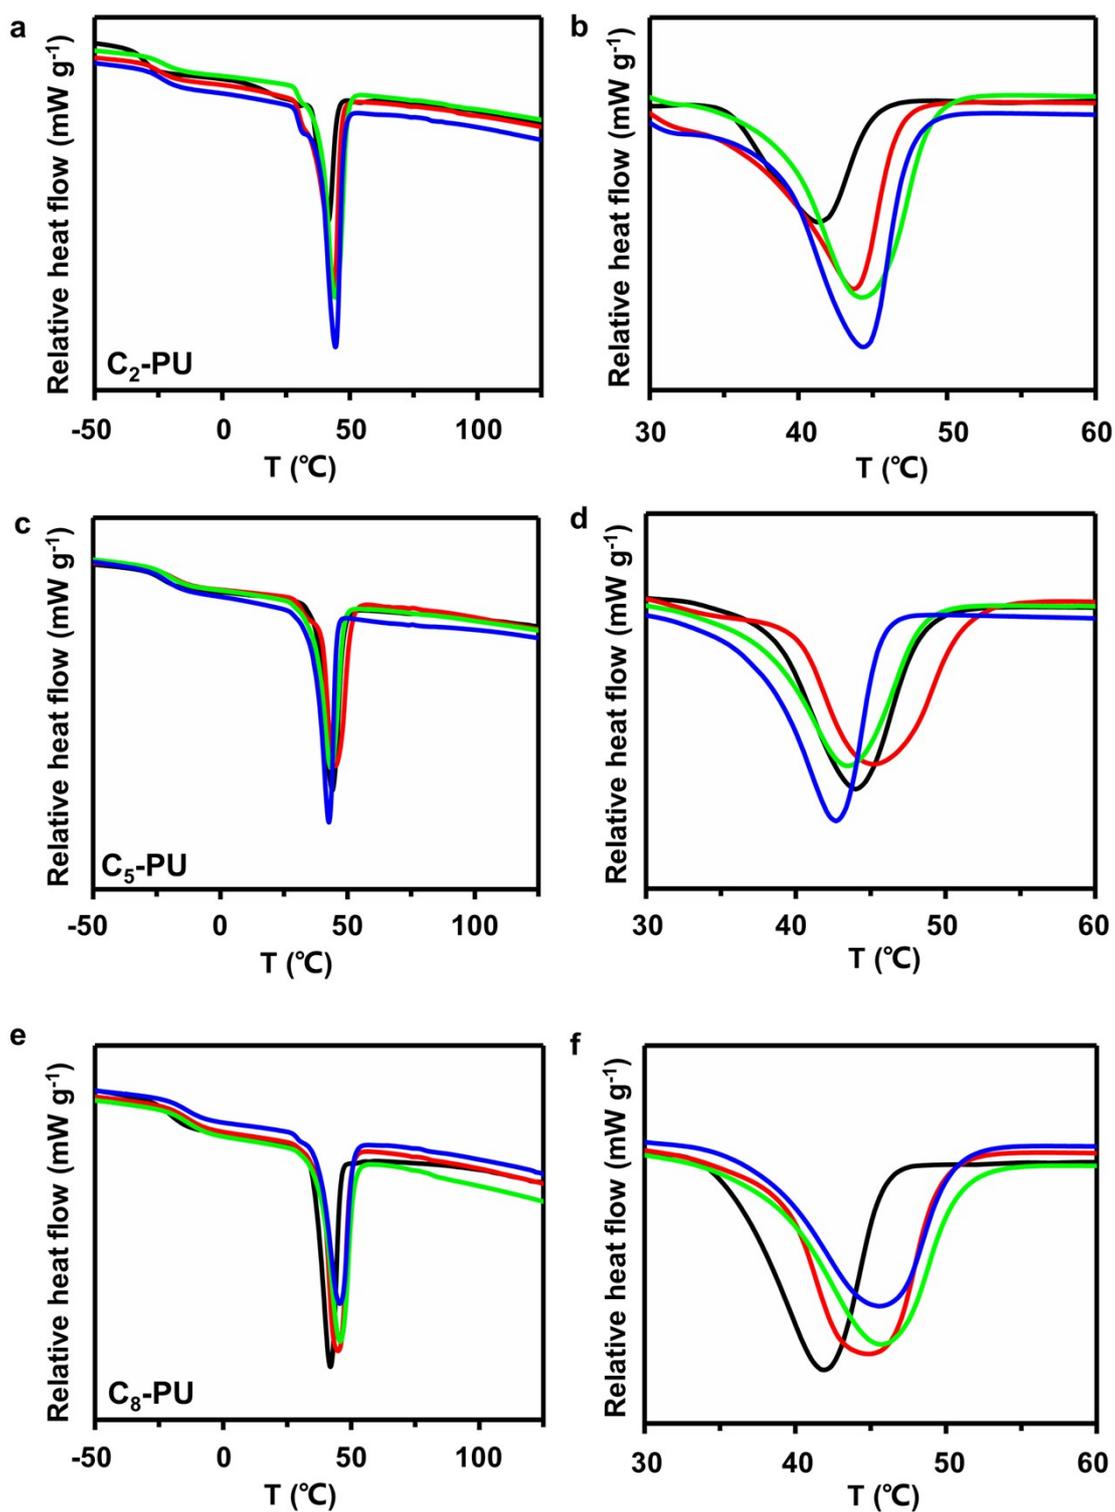

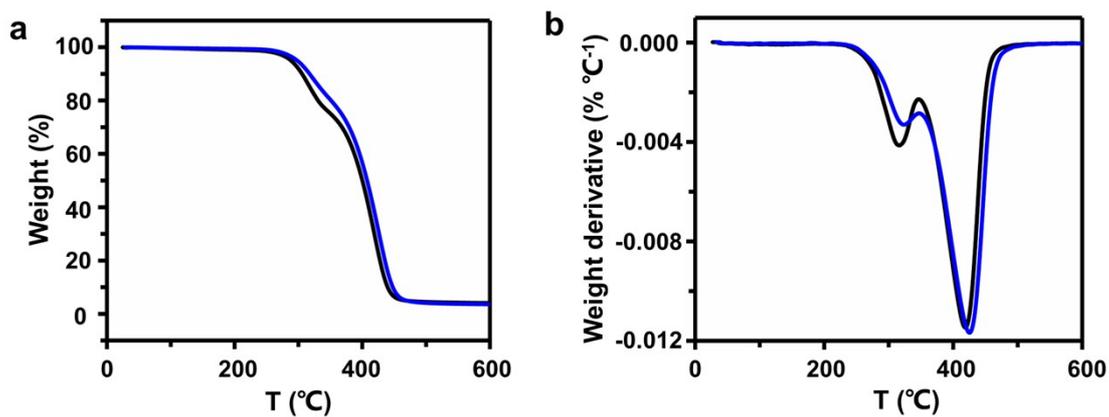

Figure S8. <sup>1</sup>H NMR spectra of B<sub>8</sub>-PU.

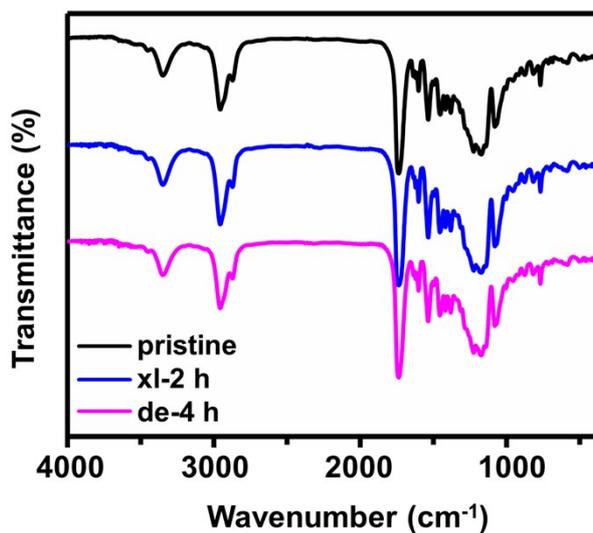

**Figure S9.** The heating thermograms from the first DSC scan of B<sub>2</sub>-PU (orange), B<sub>5</sub>-PU (cyan) and B<sub>8</sub>-PU (green) samples.

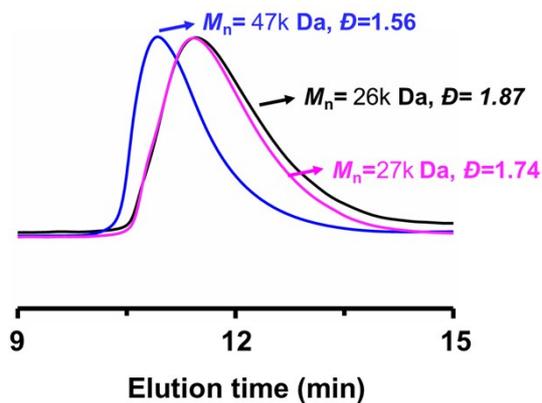

**Figure S10.** The heating thermograms from the first DSC scan of (a) C<sub>2</sub>-PU, (c) C<sub>5</sub>-PU and (e) C<sub>8</sub>-PU samples before (black) and after illumination for 24 h (red), 48 h (green) and 72 h (blue). Zoom-in images of the results were shown in (b), (d) and (f) for C<sub>2</sub>-PU, C<sub>5</sub>-PU and C<sub>8</sub>-PU, respectively. The results of these tests are listed in Table S1.

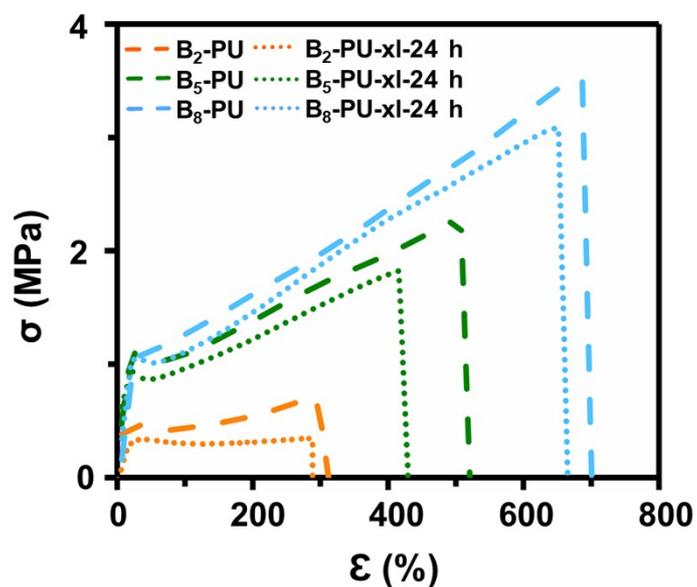

**Figure S11.** (a) TGA and (b) DTG thermograms of pristine C<sub>8</sub>-PU samples (black) and the sample after UV irradiation at 300 nm for 72 h (blue).

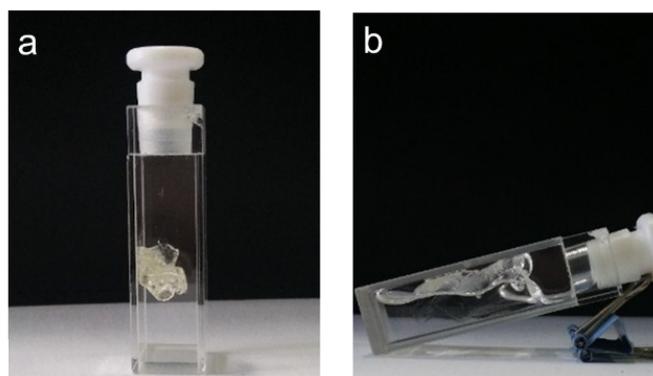

**Figure S12.** The variation of FT-IR spectra of C<sub>8</sub>-PU after UV irradiation at 300 nm and 250 nm.

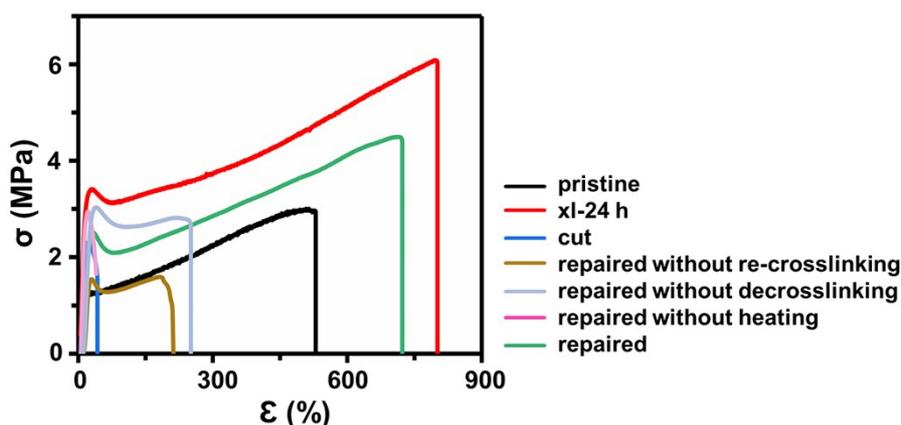

**Figure S13.** GPC traces of pristine C<sub>8</sub>-PU (black), after UV irradiation at 300 nm for 24 h (blue), and then UV irradiation at 250 nm for another 48 h (pink).

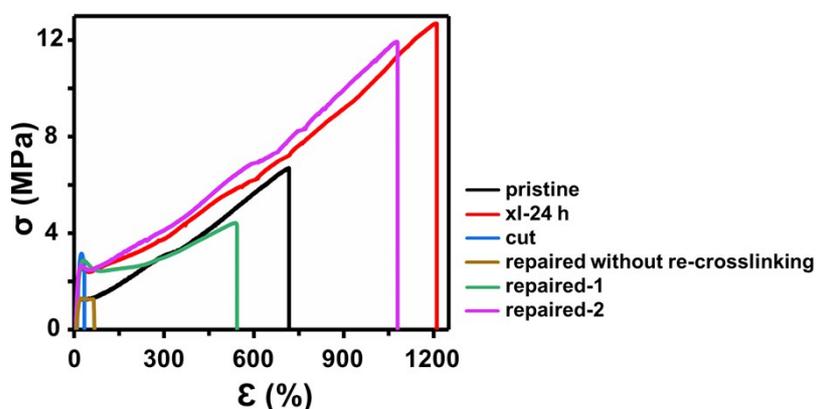

**Figure S14.** The strain-stress curves of B-PU samples before (dash) and after (dot) UV irradiation at 300 nm for 24 h.

**Figure S15.** Photographs of a small piece of C<sub>8</sub>-PU after UV irradiation at 300 nm for 120 h (a), and after dipped in THF for overnight (b).

**Figure S16.** Stress-strain curves of pristine C<sub>8</sub>-PU specimen (pristine, black); after UV-irradiation at 300 nm for 24 h (xl-24 h, red); then damaged with a cut in the middle (cut, blue); after 250 nm UV irradiation for 24 h and heating at 60 °C for 3 min but no 300 nm UV irradiation (repaired without re-crosslinking, brown); after heating, without 250 nm UV irradiation, after 300 nm UV irradiation for 24 h (repaired without decrosslinking, gray); without heating, after 250 nm UV irradiation for 24 h and 300 nm UV irradiation for 24 h (repaired without heating, pink); and after 250 nm UV irradiation for 24 h, heating at 60 °C for 3 min and 300 nm UV irradiation for 24 h (repaired, green).

**Figure S17.** Stress-strain curves of pristine C<sub>5</sub>-PU specimen (pristine, black); specimen after UV- irradiation at 300 nm for 24 h (xl-24h, red); crosslinked specimen with a cut in the middle (cut, blue); after 250 nm UV irradiation for 24 h and heating at 60 °C for 3 min but no 300 nm UV irradiation (repaired without re-crosslinking, brown); damaged specimen after 250 nm UV irradiation for 24 h, heating at 60 °C for 3 min and 300 nm UV irradiation for 24 h (repaired-1, green); damaged specimen after 250 nm UV irradiation for 24 h, heating at 60 °C for 3 min and 300 nm UV irradiation for 120 h (repaired-2, purple).

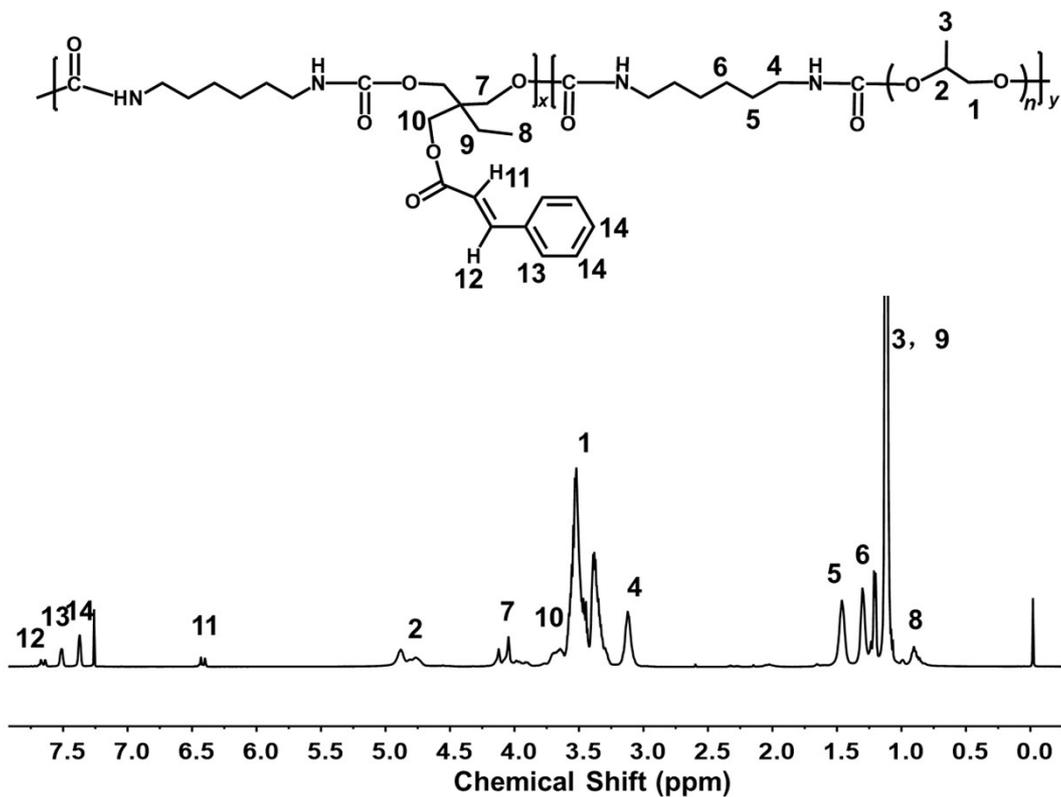

Figure S18.  $^1\text{H}$  NMR spectra of PPG-PU.

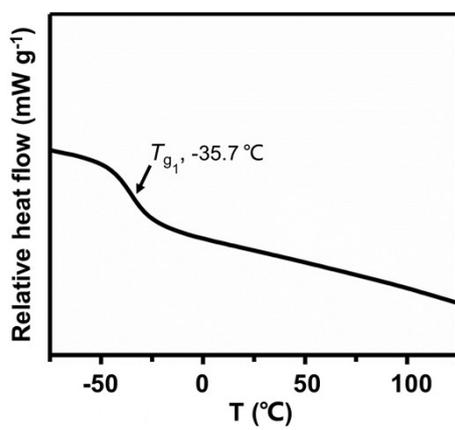

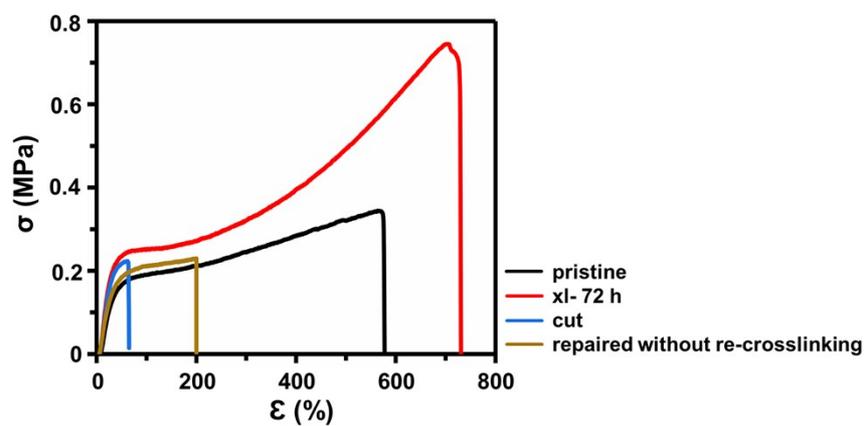

Figure S19. DSC trace of PPG-PU.

**Figure S20.** Stress-strain curves of pristine PPG-PU specimen (pristine, black); specimen after UV-irradiation at 300 nm for 72 h (xl-72 h, red); crosslinked specimen with a cut in the middle (cut, blue); after 250 nm UV irradiation for 24 h and heating at 60 °C for 3 min but no 300 nm UV irradiation (repaired without re-crosslinking, brown).

**Table S1.** Thermal properties obtained from the first heating scan of C-PU samples with irradiation at 300 nm for different time via DSC.

|                        | sample      | $T_m / ^\circ\text{C}$ | $\Delta H_m / \text{J g}^{-1}$ | crystallinity / % |
|------------------------|-------------|------------------------|--------------------------------|-------------------|
| $\text{C}_2\text{-PU}$ | pristine    | 41.37                  | 15.57                          | 22.43             |
|                        | 300 nm-24 h | 43.69                  | 31.92                          | 45.97             |
|                        | 300 nm-48 h | 44.33                  | 36.67                          | 52.82             |
|                        | 300 nm-72 h | 44.35                  | 37.41                          | 53.88             |
| $\text{C}_5\text{-PU}$ | pristine    | 44.20                  | 28.82                          | 43.72             |
|                        | 300 nm-24 h | 45.34                  | 33.22                          | 50.39             |
|                        | 300 nm-48 h | 43.52                  | 28.92                          | 43.87             |
|                        | 300 nm-72 h | 42.70                  | 29.10                          | 44.14             |
| $\text{C}_8\text{-PU}$ | pristine    | 41.86                  | 23.65                          | 37.90             |
|                        | 300 nm-24 h | 45.01                  | 30.11                          | 48.25             |
|                        | 300 nm-48 h | 45.69                  | 29.52                          | 47.30             |
|                        | 300 nm-72 h | 45.54                  | 26.85                          | 43.02             |

$T_m$ : The melting temperature of the crystalline portion

$\Delta H_m$  ( $\text{J g}^{-1}$ ): The melting enthalpy of the crystalline portion

**Table S2.** Thermal properties of C-PU samples.

| sample                 | DSC 2 <sup>nd</sup> run    |                            | TGA                        |                            |
|------------------------|----------------------------|----------------------------|----------------------------|----------------------------|
|                        | $T_{g_1} / ^\circ\text{C}$ | $T_{g_2} / ^\circ\text{C}$ | $T_{d_1} / ^\circ\text{C}$ | $T_{d_2} / ^\circ\text{C}$ |
| $\text{C}_2\text{-PU}$ | -31.5                      | 85.1                       | 309.2                      | 410.3                      |
| $\text{C}_5\text{-PU}$ | -27.5                      | 85.8                       | 311.8                      | 410.4                      |
| $\text{C}_8\text{-PU}$ | -21.7                      | 86.3                       | 319.3                      | 418.9                      |

$T_d$ : Peak decomposition temperature obtained from DTG curves.

**Table S3.** The mechanical properties of pristine B-PU samples.

|                | <b>B-PU</b>             |                         |                         |
|----------------|-------------------------|-------------------------|-------------------------|
|                | <b>B<sub>2</sub>-PU</b> | <b>B<sub>5</sub>-PU</b> | <b>B<sub>8</sub>-PU</b> |
| $\sigma$ / MPa | 0.63±0.06               | 2.08±0.33               | 3.55±0.33               |
| $\epsilon$ / % | 286±17                  | 503±11                  | 670±98                  |

**Table S4.** The mechanical properties of C-PU before and after UV irradiation for different period of time.

|             | <b>C<sub>2</sub>-PU</b> |                | <b>C<sub>5</sub>-PU</b> |                | <b>C<sub>8</sub>-PU</b> |                |
|-------------|-------------------------|----------------|-------------------------|----------------|-------------------------|----------------|
|             | $\sigma$ / MPa          | $\epsilon$ / % | $\sigma$ / MPa          | $\epsilon$ / % | $\sigma$ / MPa          | $\epsilon$ / % |
| pristine    | 1.18±0.18               | 239±15         | 6.58±0.92               | 683±34         | 3.19±0.43               | 513±66         |
| x1-24 h     | 3.08±0.26               | 406±17         | 13.23±0.40              | 1199±23        | 5.86±0.32               | 798±10         |
| x1-48 h     | 5.53±0.60               | 683±46         | 15.03±0.63              | 1291±1         | 6.64±0.39               | 924±42         |
| x1-72 h     | 6.92±0.39               | 831±32         | 16.61±0.58              | 1355±48        | 7.34±0.22               | 1086±8         |
