*Tar components with their individual content less than 1.00%.

Table S2 Band assignments of proton types in ¹H NMR spectra.

Proton type	Chemical shift (ppm)	Assignment	
H _{ar}	6.3-9.5	Aromatic protons	
		Aromatic hydrogens sterically hindered: 'bay', 'fjord' and other geometrically similar zones in angular polycyclic aromatic compounds; aromatic hydrogens in very pericondensed polycyclic aromatic compounds.	
	H _{ar2}	8.3-9.5	
	H _{ar1}	6.3-8.3	All the other aromatic hydrogens
H _{al}	0.5-4.5	Aliphatic protons	
	H _α	2.1-4.5	Protons of CH, CH ₂ or CH ₃ in the α position to the aromatic
	H _β	1.2-2.1	Protons of CH or CH ₂ in the β position or further away from the aromatic ring/Protons of CH ₃ in the β position of aromatic ring
	H _γ	0.5-1.2	Protons of CH ₃ in the γ position or further away from the aromatic ring
