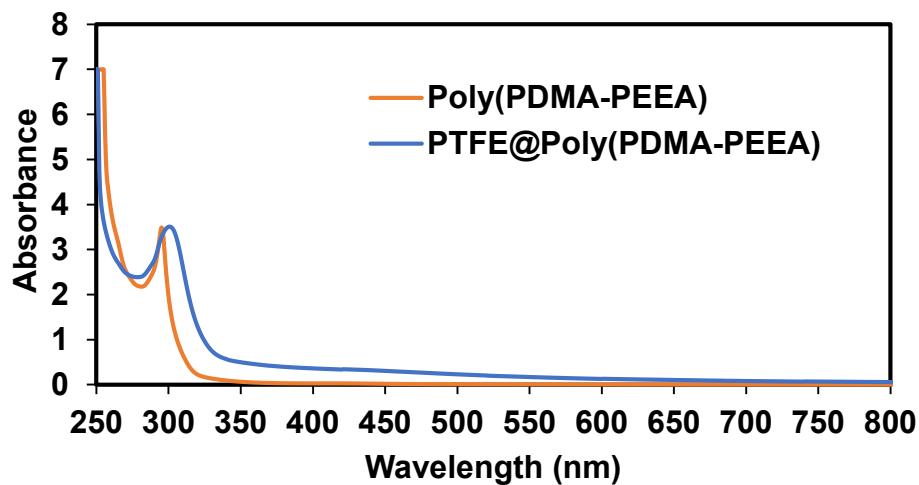

Figure S5 (a). FT-IR spectra of pristine PTFE and poly(PDMA-PEEA) coated PTFE.
(b) UV-Vis spectra of poly(PDMA-PEEA) and poly(PDMA-PEEA) coated PTFE in THF.

The FT-IR spectra of pristine PTFE show peaks for the CF_3 (1250 cm^{-1}) and CF_2 (1190 cm^{-1}) groups, whereas in poly(PDMA-PEEA) coated PTFE the appearance of C=O (1715 cm^{-1}) strongly indicates the coating of PTFE by polymer. In addition, UV-Vis

spectra of poly(PDMA-PEEA) and poly(PDMA-PEEA)@PTFE shows the absorption peaks around 300 nm, which is attributed to the presence of catechol moieties.
