Table of contents

Scheme S1. Synthetic route employed to obtain water-soluble P[5]A.....	S5
Figure S1. ¹ H NMR spectra of: (a) compound 2 (CDCl ₃ , RT, 500 MHz) and (b) P[5]A (D ₂ O, RT, 500 MHz).....	S6
Figure S2. ¹³ C NMR spectrum of the P[5]A (D ₂ O, RT, 75 MHz).....	S7
Figure S3. FTIR spectra of the MCM-41-COOH and its precursors.....	S7
Figure S4. Raman spectra of MCM-41-COOH and MCM-41-CN.....	S8
Figure S5. N ₂ Adsorption and desorption isotherms of MCM-41, MCM-41-COOH, MCM-41-COO-DOX-P[5]A, MCM-41-DOX-P[5]A, MCM-41-P[5]A and MCM-41-COO-P[5]A measured at 77 K. Adsorption = closed cycle, desorption = open cycle.....	S8
Figure S6. BJH pore size distributions of MCM-41, MCM-41-COOH, MCM-41-COO-DOX-P[5]A, MCM-41-DOX-P[5]A, MCM-41-P[5]A and MCM-41-COO-P[5]A obtained from adsorption branch.....	S9
Table S1. Textural properties of the DOX-unloaded and DOX-loaded materials.....	S9
Figure S7. PXRD patterns of MCM-41 and MCM-41-COOH.....	S10
Figure S8. (a) Scanning electron microscopy (SEM), (b) particle size distribution (PSD) and (c, d) transmission electron microscopy (TEM) of MCM-41.....	S10
Figure S9. TEM images of MCM-41-COOH obtained at different scale of size.....	S11
Figure S10. Dynamic light scattering distribution (DLS) of (a) MCM-41 and (b) MCM-41-COOH.....	S11
Figure S11. ζ-potential curves as a function of pH (2-11) for MCM-41 and MCM-41-COOH in PBS buffer at RT.....	S12
Figure S12. Acid-base titration curves of the MCM-41 and MCM-41-COOH.....	S12
Figure S13. Gran plots for (a) MCM-41 and (b) MCM-41-COOH. ^{1,2} The curves were obtained by plotting the Gran function ($V_{\text{NaOH}} \times 10^{-\text{pH}}$), <i>i.e.</i> , the product of NaOH volume added and the antilog of the pH as a function of NaOH volume used in the titration (Fig. S9). The intersections of the red lines in the V_{NaOH} -axis (when $y = 0$) provide the equivalence volumes of the base necessary to completely react with all acid sites. These volumes were used to calculate the concentrations of acid sites in MCM-41 and MCM-41-COOH. The protonation constants (pK_a) for both materials were obtained from the slope of the red line.....	S13
Table S2. Protonation constant (pK_a) and concentration of the acid sites in the MCM-41 and	

MCM-41-COOH determined by Gran Method.....	S13
Figure S14. FTIR spectra of the MCM-41-P[5]A, MCM-41-COO-P[5]A, P[5]A and MCM-41-COOH.....	S14
Figure S15. Optimized structure of P[5]A. The structure was optimized using the Chem3D module available in Chem3DUltra.....	S14
Figure S16. (a) Absorption spectra of DOX at different concentrations in PBS solution (pH = 7.4) obtained at RT and (b) the standard curve of DOX obtained from the absorption spectra using the absorption maximum at $\lambda = 483$ nm. This standard curve was used to estimate the amount of doxorubicin loaded and released from the nanocarriers.....	S15
Figure S17. The UV-Vis spectra of DOX released in PBS solution over time, at 37 °C for MCM-41-DOX-P[5]A at (a) pH = 2.0, (c) pH = 5.5 and (e) pH = 7.4; and for MCM-41-COO-DOX-P[5]A at (b) pH = 2.0, (d) pH = 5.5, (f) pH = 7.4.....	S16
Figure S18. The UV-Vis spectra of DOX released for MCM-41-COO-DOX-P[5]A after consecutive additions of acid and base to a suspension of the nanocarrier in PBS at 37 °C at (a) pH = 5.5, (b) pH = 2.0.....	S17
Figure S19. The UV-Vis spectra of DOX released for MCM-41-COO-DOX-P[5]A over time after addition of (a) 1.2 mmol L ⁻¹ Zn ²⁺ , (b) 50 mmol L ⁻¹ Zn ²⁺ (c) 19 mmol L ⁻¹ citrate ³⁻ in PBS solution at 37 °C.....	S18
Figure S20. MTT viability assay of MCF-7 cells treated with DOX-unloaded MCM-41-COO-P[5]A for 24 and 48 h using the concentrations of 0.5, 1.0, 2.5 and 5.0 $\mu\text{g mL}^{-1}$ of the nanocarrier.....	S19

Figures, Schemes and Tables

Scheme S1. Synthetic route employed to obtain water-soluble P[5]A.

Figure S1. ¹H NMR spectra of: (a) compound **2** (CDCl₃, RT, 500 MHz) and (b) P[5]A (D₂O, RT, 500 MHz).

Figure S2. ^{13}C NMR spectrum of the P[5]A (D_2O , RT, 75 MHz).

Figure S3. FTIR spectra of the MCM-41-COOH and its precursors.

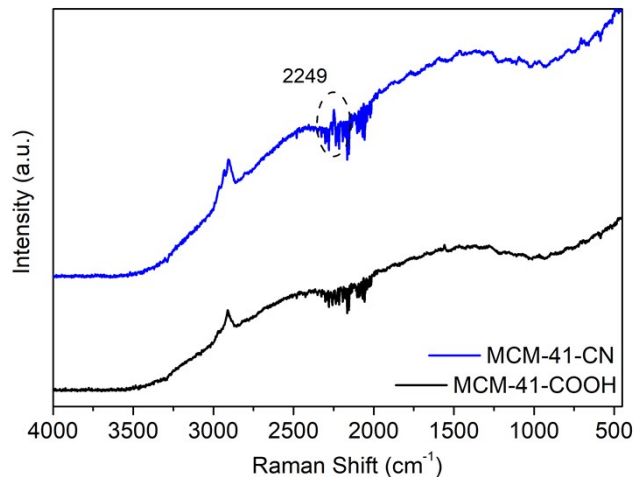

Figure S4. Raman spectra of MCM-41-COOH and MCM-41-CN.

Figure S5. N₂ Adsorption and desorption isotherms of MCM-41, MCM-41-COOH, MCM-41-COO-DOX-P[5]A, MCM-41-DOX-P[5]A, MCM-41-P[5]A and MCM-41-COO-P[5]A measured at 77 K. Adsorption = closed cycle, desorption = open cycle.

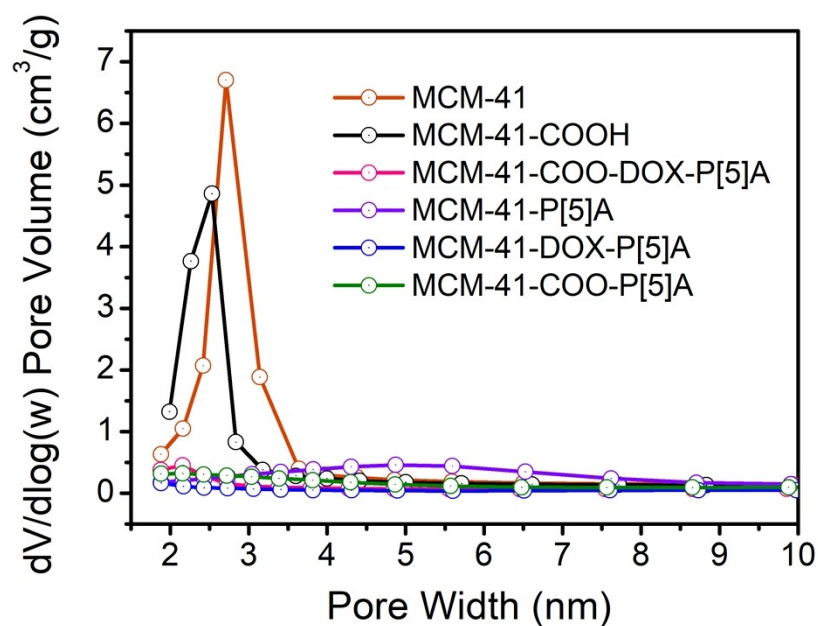

Figure S6. BJH pore size distributions of MCM-41, MCM-41-COOH, MCM-41-COO-DOX-P[5]A, MCM-41-DOX-P[5]A, MCM-41-P[5]A and MCM-41-COO-P[5]A obtained from adsorption branch.

Table S1. Textural properties of the DOX-unloaded and DOX-loaded materials.

Materials	BET surface area (m ² g ⁻¹)	BJH adsorption cumulative volume of pores V _p (cm ³ g ⁻¹)	BJH adsorption pore diameter (nm)
MCM-41	1034	1.14	2.72
MCM-41-COOH	755	0.97	2.54
MCM-41-COO-P[5]A	234	-	-
MCM-41-COO-DOX-P[5]A	188	-	-
MCM-41-P[5]A	284	-	-
MCM-41-DOX-P[5]A	144	-	-

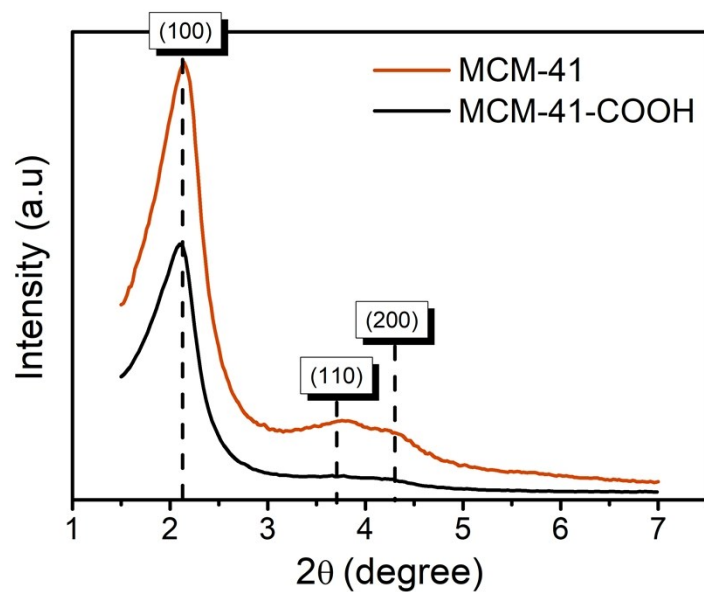

Figure S7. PXRD patterns of MCM-41 and MCM-41-COOH.

Figure S8. (a) Scanning electron microscopy (SEM), (b) particle size distribution (PSD) and (c, d) transmission electron microscopy (TEM) of MCM-41.

Figure S9. TEM images of MCM-41-COOH obtained at different scale of size.

Figure S10. Dynamic light scattering distribution (DLS) of (a) MCM-41 and (b) MCM-41-COOH in deionized water.

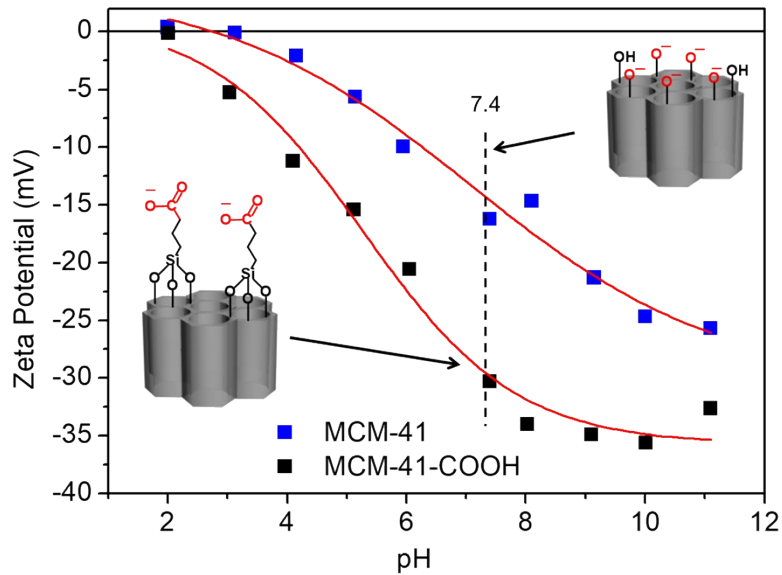

Figure S11. ζ -potential curves as a function of pH (2-11) for MCM-41 and MCM-41-COOH in PBS buffer at RT.

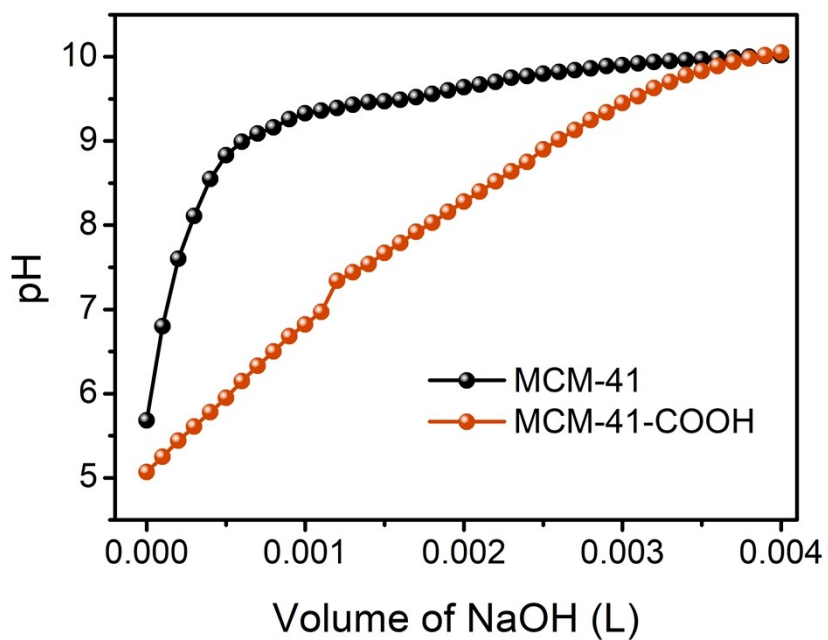

Figure S12. Acid-base titration curves of the MCM-41 and MCM-41-COOH.

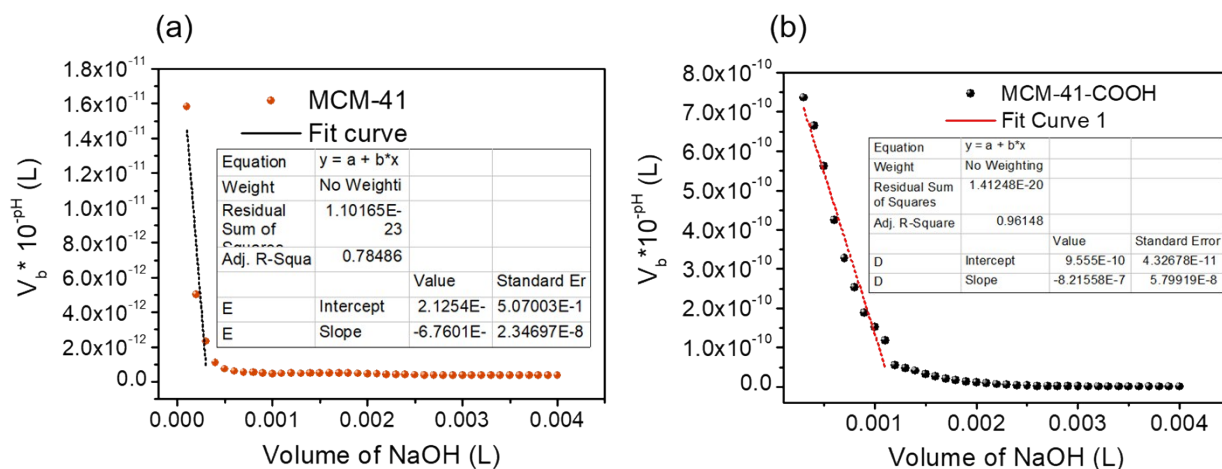

Figure S13. Gran plots for (a) MCM-41 and (b) MCM-41-COOH.^{1,2} The curves were obtained by plotting the Gran function ($V_{\text{NaOH}} \times 10^{-\text{pH}}$), *i.e.*, the product of NaOH volume added and the antilog of the pH as a function of NaOH volume used in the titration (Fig. S12). The intersections of the red lines in the V_{NaOH} -axis (when $y = 0$) provide the equivalence volumes of the base necessary to completely react with all acid sites. These volumes were used to calculate the concentrations of acid sites in MCM-41 and MCM-41-COOH. The protonation constants (pK_a) for both materials were obtained from the slope of the red line.

Table S2. Protonation constant (pK_a) and concentration of the acid sites in the MCM-41 and MCM-41-COOH determined by Gran Method.

Materials	pK_a	Concentration of the acid sites ($\mu\text{mol g}^{-1}$)
MCM-41	7.2	154
MCM-41-COOH	6.1	582

Figure S14. FTIR spectra of the MCM-41-P[5]A, MCM-41-COO-P[5]A, P[5]A and MCM-41-COOH.

Figure S15. Optimized structure of P[5]A. The structure was optimized using the Chem3D module available in Chem3DUltra.

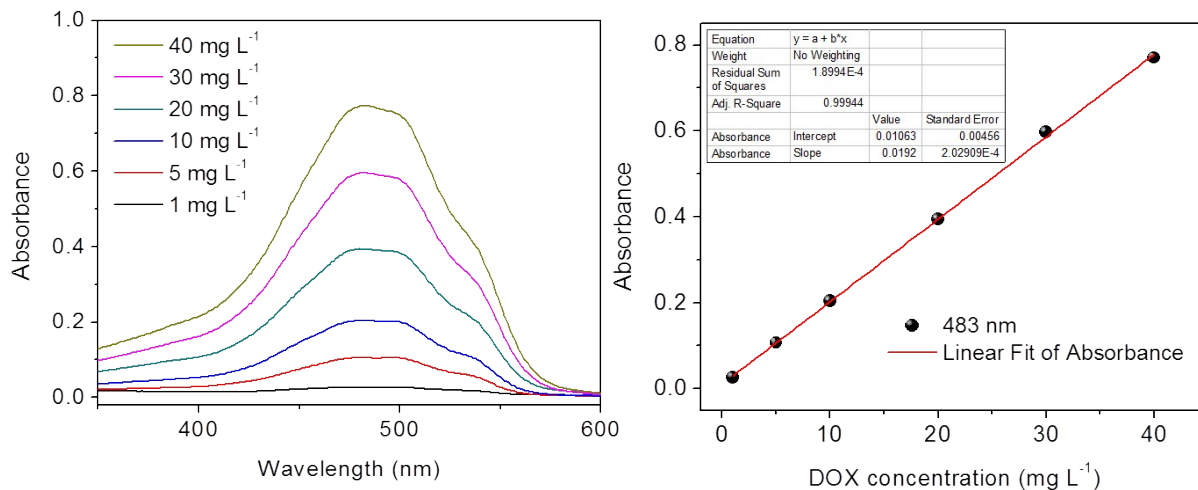

Figure S16. (a) Absorption spectra of DOX at different concentrations in PBS solution (pH = 7.4) obtained at RT and (b) the standard curve of DOX obtained from the absorption spectra using the absorption maximum at $\lambda = 483$ nm. This standard curve was used to estimate the amount of DOX loaded and released from the nanocarriers.

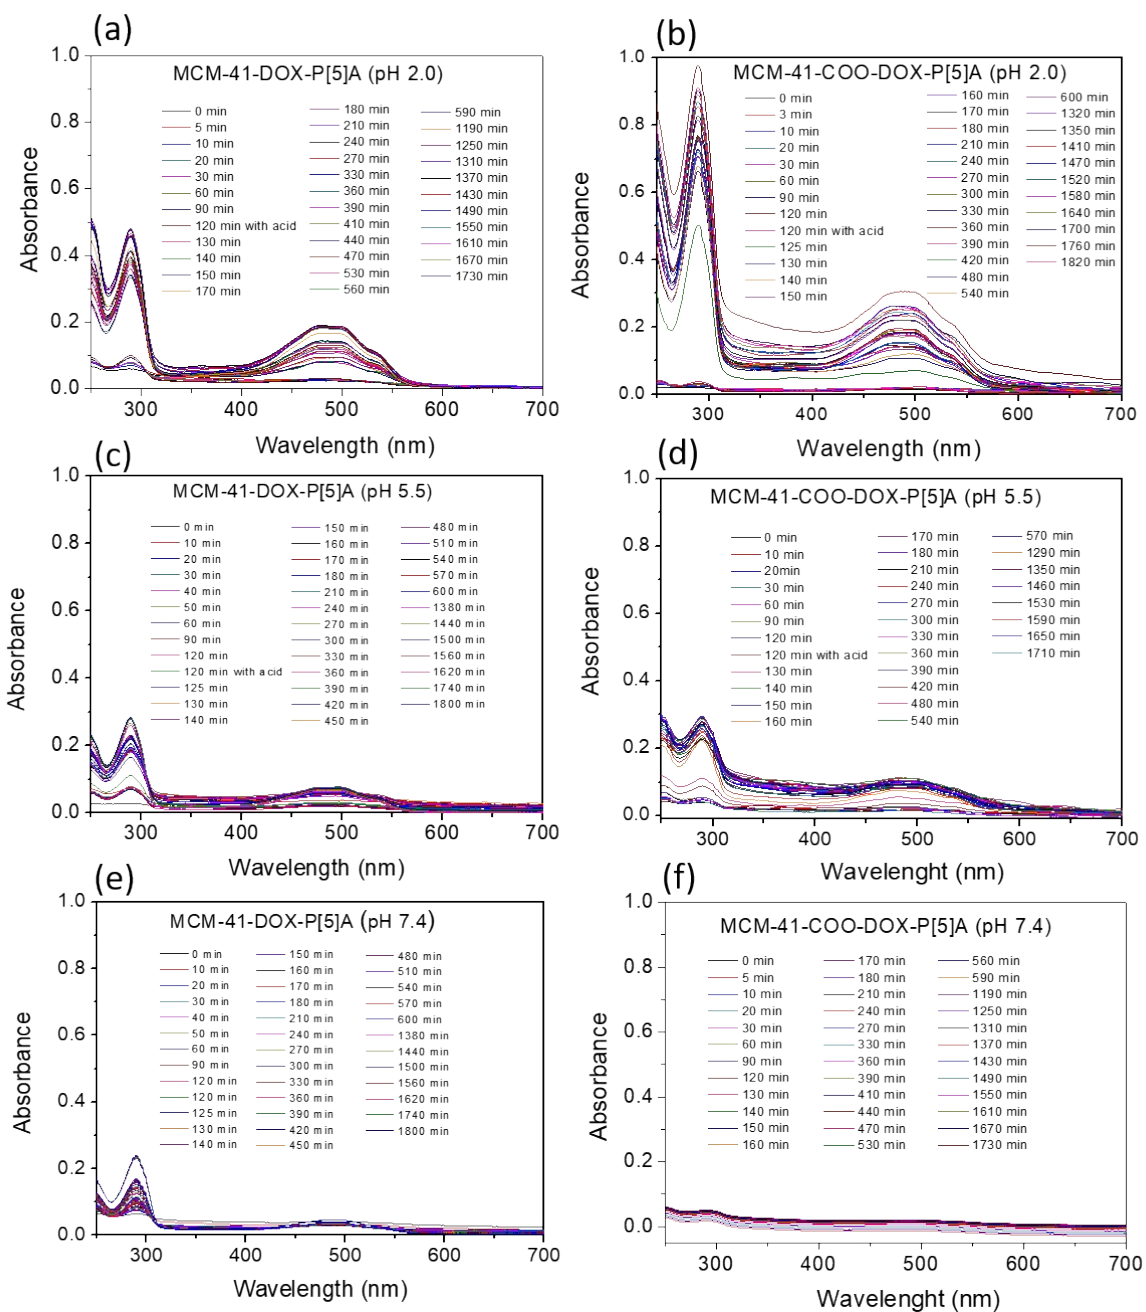

Figure S17. The UV-Vis spectra of DOX released in PBS solution over time, at 37 °C for MCM-41-DOX-P[5]A at (a) pH = 2.0, (c) pH = 5.5 and (e) pH = 7.4; and for MCM-41-COO-DOX-P[5]A at (b) pH = 2.0, (d) pH = 5.5, (f) pH = 7.4.

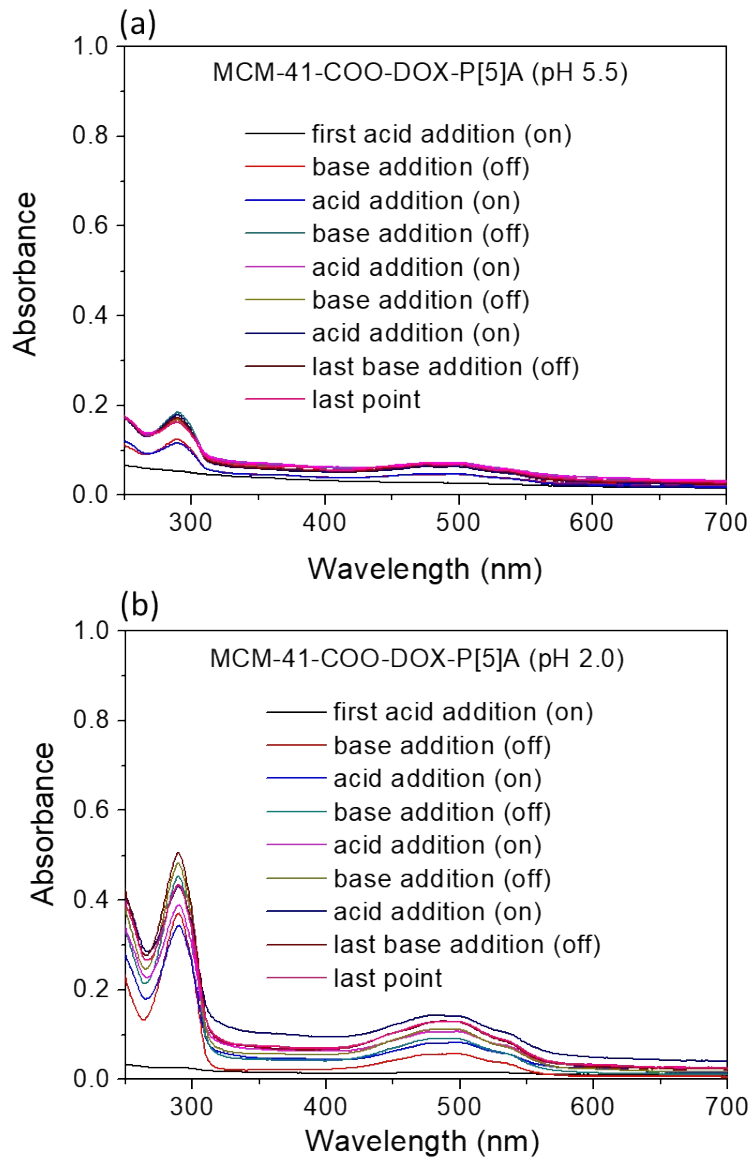

Figure S18. The UV-Vis spectra of DOX released for MCM-41-COO-DOX-P[5]A after consecutive additions of acid and base to a suspension of the nanocarrier in PBS at 37 °C at (a) pH = 5.5, (b) pH = 2.0.

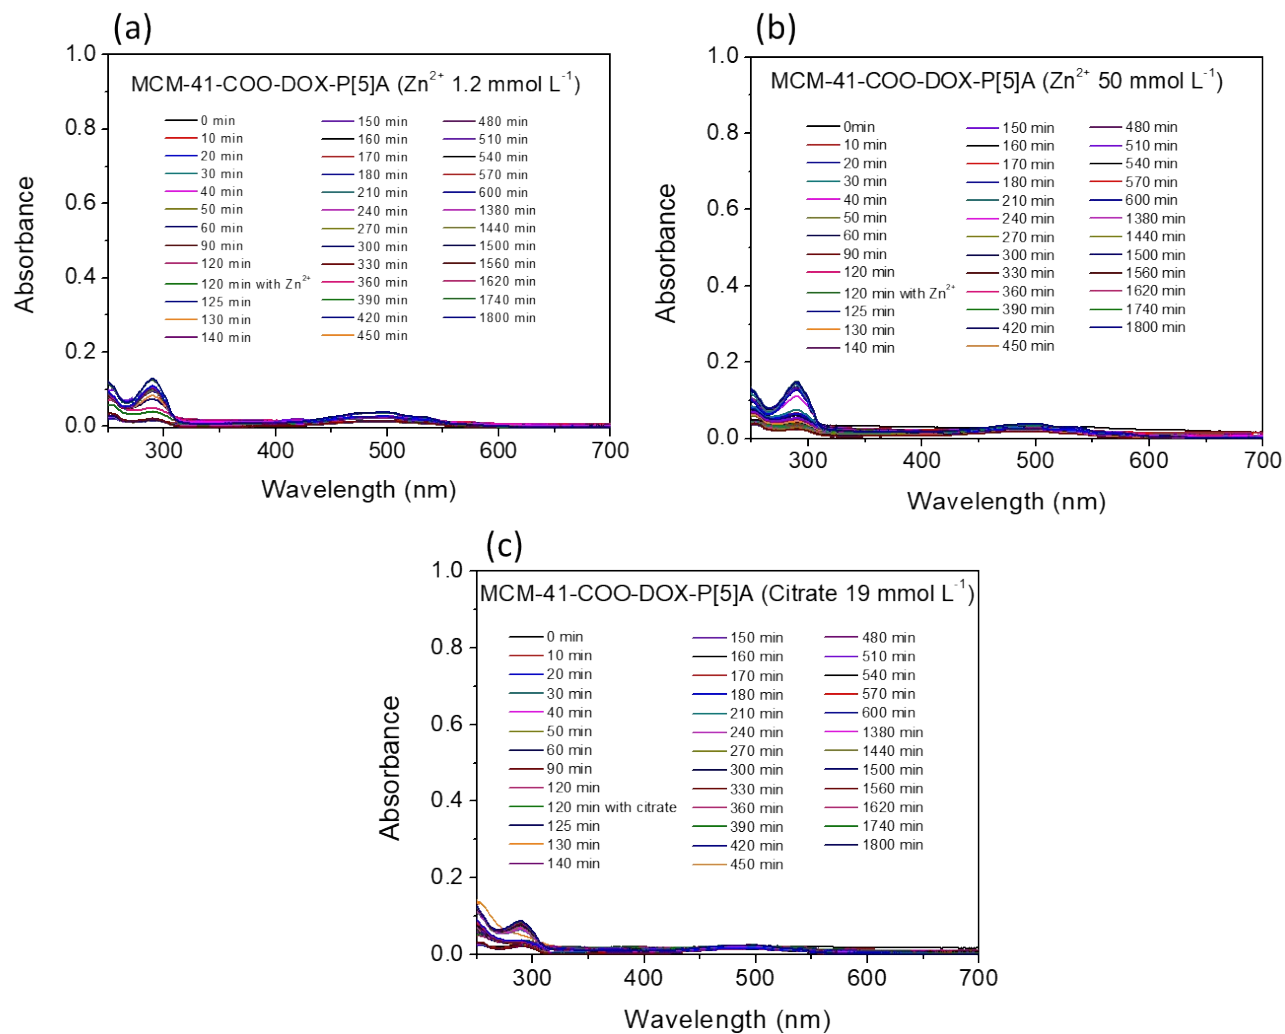

Figure S19. The UV-Vis spectra of DOX released for MCM-41-COO-DOX-P[5]A over time after addition of (a) $1.2 \text{ mmol L}^{-1} \text{ Zn}^{2+}$, (b) $50 \text{ mmol L}^{-1} \text{ Zn}^{2+}$ (c) $19 \text{ mmol L}^{-1} \text{ citrate}^{3-}$ in PBS solution at $37 \text{ }^\circ\text{C}$.

Figure S20. MTT viability assay of MCF-7 cells treated with DOX-unloaded MCM-41-COO-P[5]A for 24 and 48 h using the concentrations of 23.25, 46.50, 116.28 or 232.56 $\mu\text{g mL}^{-1}$ of the nanocarrier.
