## 1. Experimental Section

1.1 Materials and reagents: The chemicals and solvents used during the synthesis and studies of the materials described in the manuscript were all of AR quality and used without any prior purification. Pentabromophenol, potassium carbonate $\left(\mathrm{K}_{2} \mathrm{CO}_{3}\right)$, dibromohexane, dibromooctane, dibromodecane, 4-pentyl phenylacetylene, copper iodide (CuI), bis(triphenylphosphine) palladium(II) dichloride $\left(\mathrm{Pd}_{( }\left(\mathrm{PPh}_{3}\right)_{2} \mathrm{Cl}_{2}\right)$, triphenylphosphine $\left(\mathrm{PPh}_{3}\right)$, triethylamine $\left(\mathrm{Et}_{3} \mathrm{~N}\right)$, Potassium hydroxide $(\mathrm{KOH})$, tetraoctylammoniumbromide (TOAB) were all purchased from Sigma-Aldrich (Bangalore, India). Potassium iodide (KI) and hydrochloric acid $(\mathrm{HCl})$ were purchased from Merck. Column chromatographic separations were performed on silica gel (60-120) and neutral alumina gel. Thin layer chromatography (TLC) was performed on alumina sheets pre-coated with silica gel (Merck, Kieselgel 60, F254).

Indium-tin oxide (ITO) coated glass substrates were purchased from the Luminescence Technology Corporation, Taiwan. The sublimated grade materials Poly(3,4-ethylenedioxythiophene)-poly(styrenesulfonate) (PEDOT:PSS) and lithium fluoride (LiF) were purchased from Sigma-Aldrich Inc., USA. The hosts 4,4'-Bis(N-carbazolyl)-1, $1^{\prime}$ biphenyl (CBP), 2,7-Bis(carbazol-9-yl)-9,9-spirobifluorene (Spiro-2CBP), Tris(4-carbazoyl-9-ylphenyl)amine (TCTA), and electron transport material 2,2',2"-(1,3,5-Benzinetriyl)-tris(1-phenyl-1-H-benzimidazole) (TPBi) were purchased from the Luminescence Technology Corporation, Taiwan. Aluminum (Al) ingots (99.999\%) were purchased from Showa Chemical Co. Ltd., Japan.

### 1.2 Instrumentation

The details of instrumentations and other studies have been provided as reported in our previous manuscript. ${ }^{1}$
1.2.1 Structural characterization ${ }^{1}$ : ${ }^{11} \mathrm{H}$ NMR and ${ }^{13} \mathrm{C}$ NMR (Bruker Biospin Switzerland Avance-iii 400 MHz and 100 MHz spectrometers, respectively), UV-VIS-NIR spectrophotometer (Agilent Technologies UV-Vis-NIR Spectrophotometer). NMR spectra were recorded using deuterated chloroform $\left(\mathrm{CDCl}_{3}\right)$ as solvent and tetramethylsilane (TMS) as an internal standard."
1.2.2 Polarised Optical Microscopy ${ }^{1}$ : "Textural observations of the mesophase were performed with Nikon Eclipse LV100POL polarising microscope provided with a Linkam heating stage (LTS 420). All images were captured using a Q-imaging camera."
1.2.3 DSC Study ${ }^{1}$ : "The transition temperatures and associated enthalpy values were determined using a differential scanning calorimeter (Perkin Elmer DSC 8000 coupled to a controlled liquid nitrogen accessory (CLN 2)) which was operated at a scanning rate of $10{ }^{\circ} \mathrm{C}$ $\min ^{-1}$ both on heating and cooling."
1.2.4 X-ray diffraction studies ${ }^{1}$ : "X-ray diffraction (XRD) was carried out using $\mathrm{Cu} \mathrm{K} \alpha$ ( $\lambda=1.54 \AA$ ) radiation from a source (GeniX 3D, Xenocs) operating at 50 kV and 0.6 mA . The diffraction patterns were collected on a two module Pilatus detector."
1.2.5 Photophysical studies ${ }^{1}$ : "Fluorescence emission spectra and steady state anisotropy experiments were performed on Horiba Scientific Fluoromax spectrofluorometer 4. Time resolved lifetime measurements were done on time correlated single photon counter from Horiba Jobin Yvon."
1.2.6 Electrochemical studies": "Cyclic Voltammetry experiments were performed on CH Instruments, electrochemical workstation."
1.2.7 Electron density map $^{1}$ : The details have reported elsewhere. "The electron density $\rho(\mathrm{x}, \mathrm{y})$ of a liquid crystal is linked to its structure factor $\mathrm{F}(h k)$ by inverse Fourier transformation: $\rho(\mathrm{x}, \mathrm{y})=\Sigma \mathrm{F}(h k) \mathrm{e}^{2 \pi \mathrm{i}(h \mathrm{x}+k \mathrm{y})}$
In this formula ( $h k$ ) are the Miller Indices and $x, y$ the fractional coordinates in the unit cell. To calculate the electron density, the complex structure factor $(h k)$ has to be written as the product of the phase $\Phi(h k)$ and the modulus $|\mathrm{F}(h k)|$ which is proportional to the square root of the intensity $I(h k)$ of the observed reflection
$\mathrm{F}(h k)=|\mathrm{F}(h k)| \mathrm{e}^{\mathrm{i} \Phi(h k)}=\sqrt{ } \mathrm{I}(h k) \mathrm{e}^{\mathrm{i} \Phi(h k)}$
While the intensity $\mathrm{I}(h k)$ can be easily obtained from the X-ray diffraction experiment, the only information that cannot be obtained directly from experiment is the phase $\Phi(h k)$ for each diffraction peak. However, this problem becomes easily tractable when the structure under study is centro-symmetric, that if $\rho(x, y)=\rho(-x,-y), F(h k)$ can only be real hence, $\Phi(h k)$ can only be 0 or $\pi$. For non-centro-symmetric groups, the phase may take every value between 0 and $2 \pi$. Since the columnar phase observed in these compound assemblies are centro-symmetric and have only limited number of diffraction peaks, it is possible to reconstruct electron density
maps of all possible phase combinations. The "correct" map is subsequently chosen on the merit of the reconstructed maps and other physical and chemical knowledge of the system such as, chemical constituents and their sizes etc."

## 2. Synthetic details

The compounds 2a-c were prepared according to the procedure as reported in earlier reports. ${ }^{1,2}$

### 2.1 General procedure for the synthesis of the compound 2a-c: In a round bottom flask

 (R.B), pentabromophenol ( 1 equiv.), potassium carbonate ( 5 equiv.) and alkyl bromide ( 5 equiv.) was refluxed in a 30 ml dry acetone for 12 hours. Potassium iodide was added in a catalytic amount. After completion of the reaction, the acetone was evaporated and then extracted with DCM. The reaction mixture was purified in 100-120 silica gel by using hexane/EtOAc as an eluent.The compounds 3a-c were prepared according to the procedure as reported in previous reports. ${ }^{1,2}$
2.2 General procedure for the synthesis of the compound 3a-c: The sonoghshira of alkylated compound $2(500 \mathrm{mg}$ ) was done by taking 30 ml of dry triethylamine in a round bottom flask which was degassed followed by the addition of $\mathrm{Pd}\left(\mathrm{PPh}_{3}\right)_{2} \mathrm{Cl}_{2}(50 \mathrm{mg}), \mathrm{CuI}(50$ $\mathrm{mg}) \& \mathrm{PPh}_{3}(100 \mathrm{mg})$. The mixture was stirred for 15 minutes followed by the gradual addition of 4-pentylphenylacetylene. The reaction mixture was stirred at $100^{\circ} \mathrm{C}$ for 24 h under nitrogen atmosphere \& after cooling to room temperature it was poured into 30 ml of 5 M HCl . After extracting the reaction mixture with DCM, the compound was purified in 230-400 silica gel by using hexane/EtOAc as an eluent.

The compounds 4a-c were prepared according to the procedure as reported in previous reports. ${ }^{3}$
2.3 General procedure for the synthesis of the compound 4a-c: A mixture of compound $\mathbf{2}$ (1 equiv.) and $\mathrm{NaN}_{3}$ ( 13 equiv.) in DMF ( 10 mL ) was stirred at room temperature for 12 h . After addition of water, it was extracted with diethyl ether. The organic layer was dried with $\mathrm{Na}_{2} \mathrm{SO}_{4}$, and solvent was removed under reduced pressure. The compound was used without further purification.

The hexahexyloxytriphenylene 5 and monohydroxytriphenylene $\mathbf{6}$ were prepared as reported in several reports earlier. ${ }^{4,5}$ The compound $\mathbf{7}(\mathbf{m}=\mathbf{1} \& \mathbf{m}=\mathbf{2})$ were prepared as per reference no. 3.
2.4 General procedure for the synthesis of the compound $7(\mathbf{m}=\mathbf{1} \& \mathbf{m}=\mathbf{2}$, see Scheme $\mathbf{1}$ in main manuscript): To the mixture of compound 6 (1 equiv.) and $\mathrm{K}_{2} \mathrm{CO}_{3}$ (4 equiv.) in DMF $(3 \mathrm{~mL})$, the terminal alkyne (1-bromo-propyne, $\mathrm{m}=1 \& 3$-bromo-1-propyne, $\mathrm{m}=2$ ) ( 16 equiv.) was added, and the mixture was stirred over 12 h at $50^{\circ} \mathrm{C}$. After removing the solvent, the residue was washed with water and extracted with diethylether. The organic layer was dried with $\mathrm{Na}_{2} \mathrm{SO}_{4}$, and the organic solvent was removed under vacuum. The crude product was purified by column chromatography with 60-120 silica gel by using hexane/ethyl acetate as an eluent to get the product as a white solid.
2.5 General procedure for the synthesis of the target compounds 8a-c \& 9a-c: Compound 4 ( 1 equiv.) and 7 ( $\mathrm{m}=1 \& \mathrm{~m}=2$ ) ( 1 equiv.) were dissolved in toluene ( 2 mL ), then $\mathrm{CuI}(1.4$ equiv.) and $\mathrm{NEt}_{3}$ ( 0.24 equiv.) was added. The resulting mixture was stirred for 12 h at room temperature. Then toluene was removed under reduced pressure, and the residual solid was purified by column chromatography with 100-200 silica gel by using hexane/ethyl acetate as an eluent to obtain the product as a yellowish brown solid.

The NMR of only target compounds have been provided, the NMRs of the intermediates can be found in the corresponding cited references. The target compounds 8a-c and 9a-c were comprehensively characterized by ${ }^{1} \mathrm{H}$ NMR, ${ }^{13} \mathrm{C}$ NMR, FT-IR, HRMS. The spectral details of the target compounds $\mathbf{8 a - c} \& \mathbf{9 a - c}{ }^{1} \mathrm{H}$ NMR, ${ }^{13} \mathrm{C}$ NMR, FT-IR, HRMS are detailed as below:

### 2.6 Spectral data details of the final compounds 8a-c and 9a-c:

## Compound 8a:

FT-IR $\left(\mathrm{cm}^{-1}\right): 2955.50,2929.29,2857.60,2208.29,1741.7,1616.47,1513.31,1466.87$, 1434.80, 1379.78, 1346.81, 1262.10, 1168.74, 1085.9, 1043.22, 838.01, 726.72, 597.89, 551.11.
${ }^{1} \mathrm{H}$ NMR ( $400 \mathrm{MHz}, \mathrm{CDCl}_{3}, \delta$ in ppm): $\delta 8.08(\mathrm{~s}, 1 \mathrm{H}), \delta 7.83(\mathrm{~s}, 1 \mathrm{H}), \delta 7.81(\mathrm{~s}, 4 \mathrm{H}), \delta 7.58(\mathrm{~s}$, $1 \mathrm{H}), \delta 7.54-7.47(\mathrm{~m}, 10 \mathrm{H}), \delta 7.18-7.15(\mathrm{~m}, 10 \mathrm{H}), \delta 5.49(\mathrm{~s}, 2 \mathrm{H}), 4.29-4.19(\mathrm{~m}, 14 \mathrm{H}), 2.65-2.58$ $(\mathrm{m}, 10 \mathrm{H}), 1.98-1.88(\mathrm{~m}, 10 \mathrm{H}), 1.86-1.81(\mathrm{~m}, 4 \mathrm{H}), 1.62-1.56(\mathrm{~m}, 22 \mathrm{H}), 1.43-1.28(\mathrm{~m}, 42 \mathrm{H})$, $0.94-0.86(\mathrm{~m}, 30 \mathrm{H})$.
${ }^{13} \mathrm{C}$ NMR ( $100 \mathrm{MHz}, \mathrm{CDCl}_{3}, \delta$ in ppm): $\delta 160.11,149.44,149.26,148.87,147.83,144.70$, 144.19, 144.16, 143.87, 131.90, 131.78, 131.66, 128.94, 128.72, 128.67, 128.64, 124.28, 123.83, 123.61, 123.38, 123.27, 122.75, 120.78, 120.57, 120.54, 120.10, 108.95, 107.59, 107.21, 106.77, 106.49, 99.76, 99.41, 97.52, 87.15, 84.15, 74.26, 70.03, 69.92, 69.70, 64.15,
$50.40,36.12,36.07,32.07,31.85,31.82,31.62,31.60,31.09,30.31,29.85,29.59,29.56,29.48$, $26.51,26.00,25.99,25.91,22.81,22.68,22.66,14.58,14.21,14.19$.

HRMS (MALDI) for $\mathrm{C}_{128} \mathrm{H}_{161} \mathrm{~N}_{3} \mathrm{O}_{7}(\mathrm{M}+\mathrm{H})$ : calculated - 1854.2446; found-1854.2546.

## Compound 8b:

FT-IR ( $\mathrm{cm}^{-1}$ ): 2955.70, 2928.78, 2857.00, 2208.11, 1737.80, 1616.56, 1513.26, 1466.75, 1434.99, 1379.64, 1346.81, 1262.43, 1169.64, 1085.9, 1042.80, 838.12, 726.08, 593.98, 547.14.
${ }^{1}{ }^{H}$ NMR ( $400 \mathrm{MHz}, \mathrm{CDCl}_{3}, \delta$ in ppm): $\delta 8.09(\mathrm{~s}, 1 \mathrm{H}), \delta 7.84(\mathrm{~s}, 1 \mathrm{H}), \delta 7.82(\mathrm{~s}, 4 \mathrm{H}), \delta 7.64$ (s, $1 \mathrm{H}), \delta 7.55-7.49(\mathrm{~m}, 10 \mathrm{H}), \delta 7.18-7.15(\mathrm{~m}, 10 \mathrm{H}), \delta 5.50(\mathrm{~s}, 2 \mathrm{H}), 4.35-4.20(\mathrm{~m}, 14 \mathrm{H}), 2.64-2.59$ $(\mathrm{m}, 10 \mathrm{H}), 1.99-1.83(\mathrm{~m}, 14 \mathrm{H}), 1.67-1.55(\mathrm{~m}, 22 \mathrm{H}), 1.44-1.25(\mathrm{~m}, 46 \mathrm{H}), 0.95-0.87(\mathrm{~m}, 30 \mathrm{H})$.
${ }^{13} \mathrm{C}$ NMR ( $100 \mathrm{MHz}, \mathrm{CDCl}_{3}, \delta$ in ppm): $\delta 160.25,149.44,149.26,148.91,148.86,147.86$, $144.72,144.17,144.08,143.85,131.89,131.77$, 131.69, 128.91, 128.68, 128.64, 124.27, 124.24, 124.06, 123.83, 123.63, 123.38, 123.25, 122.73 120.79, 120.63, 120.56, 120.14, $108.95,107.61,107.22,106.48,99.70,99.46,97.46,87.17,86.68,84.22,74.70,70.03,69.93$, $69.71,69.54,69.34,64.17,50.54,36.12,31.84,31.62,31.60,31.11,31.08,30.59,30.37$, $29.85,29.58,29.55,29.48,29.40,29.04,26.59,26.34,26.00,22.82,22.68,14.21,14.19$.

HRMS (MALDI) for $\mathrm{C}_{130} \mathrm{H}_{165} \mathrm{~N}_{3} \mathrm{O}_{7}(\mathrm{M}+\mathrm{H})$ : calculated - 1882.2759; found-1882.2852.

## Compound 8c:

FT-IR ( $\mathrm{cm}^{-1}$ ): 2959.70, 2928.61, 2856.84, 2210.10, 1733.90, 1616.08, 1512.89, 1468.40, $1434.65,1379.77$, 1262.10, 1170.59, 1085.90, 1041.72, 839.92, 802.90, 730.61, 597.89, 558.85.
${ }^{1} \mathrm{H}$ NMR ( $400 \mathrm{MHz}, \mathrm{CDCl}_{3}, \delta$ in ppm): $\delta 8.09(\mathrm{~s}, 1 \mathrm{H}), \delta 7.84(\mathrm{~s}, 1 \mathrm{H}), \delta 7.82(\mathrm{~s}, 4 \mathrm{H}), \delta 7.65(\mathrm{~s}$, $1 \mathrm{H}), \delta 7.55-7.49(\mathrm{~m}, 10 \mathrm{H}), \delta 7.17-7.15(\mathrm{~m}, 10 \mathrm{H}), \delta 5.50(\mathrm{~s}, 2 \mathrm{H}), 4.34-4.20(\mathrm{~m}, 14 \mathrm{H}), 2.64-2.60$ $(\mathrm{t}, 10 \mathrm{H}, J=6.94 \mathrm{~Hz}), 1.96-1.87(\mathrm{~m}, 14 \mathrm{H}), 1.62-1.57(\mathrm{~m}, 22 \mathrm{H}), 1.41-1.32(\mathrm{~m}, 50 \mathrm{H}), 0.94-0.86$ (m, 30H).
${ }^{13} \mathrm{C}$ NMR ( $100 \mathrm{MHz}, \mathrm{CDCl}_{3}, \delta$ in ppm): $\delta 149.45,149.27,148.97,148.86,148.36,147.87$, $146.85,144.16,144.09,144.03,131.90,131.78$, 131.71, 128.88, 128.66, 124.28, 123.64, 123.57, 122.71, 121.36, 120.66, 120.58, 120.17, 107.62, 107.24, 99.66, 99.47, 98.90, 97.43, 87.19, 84.23, 74.84, 70.19, 70.03, 69.85, 69.71, 69.65, 69.55, 69.35, 64.19, 50.59, 36.10, 32.08,
$31.84,31.62,31.11,30.69,30.44,29.85,29.59,29.48,29.10,26.65,26.45,26.00,22.82,22.68$, 14.21, 14.19.

HRMS (MALDI) for $\mathrm{C}_{132} \mathrm{H}_{169} \mathrm{~N}_{3} \mathrm{O}_{7}(\mathrm{M}+\mathrm{H})$ : calculated - 1910.3072; found-1910.3203.

## Compound 9a:

FT-IR ( $\mathrm{cm}^{-1}$ ): 2959.10, 2929.57, 2857.79, 2210.30, 1733.90, 1616.13, 1512.99, 1468.40, 1434.70, 1379.93, 1262.38, 1170.52, 1085.90, 1042.84, 838.28, 802.90, 732.25, 595.03, 555.83.
${ }^{1} \mathrm{H}$ NMR ( $400 \mathrm{MHz}, \mathrm{CDCl}_{3}, \delta$ in ppm): $\delta 7.82-7.81(\mathrm{~m}, 6 \mathrm{H}), \delta 7.55-7.47(\mathrm{~m}, 10 \mathrm{H}), \delta 7.23(\mathrm{~s}$, $1 \mathrm{H}), \delta 7.18-7.15(\mathrm{~m}, 10 \mathrm{H}), \delta 4.28-4.17(\mathrm{~m}, 16 \mathrm{H}), \delta 3.05-3.01(\mathrm{t}, 2 \mathrm{H}, \mathrm{J}=7.40 \mathrm{~Hz}), \delta 2.62-2.61$ $(\mathrm{m}, 10 \mathrm{H}), 2.34-2.31(\mathrm{t}, 2 \mathrm{H}, J=6.68 \mathrm{~Hz}), 1.92-1.83(\mathrm{t}, 10 \mathrm{H}, J=7.16 \mathrm{~Hz}), 1.81-1.79(\mathrm{~m}, 4 \mathrm{H})$, $1.63-1.57(\mathrm{~m}, 22 \mathrm{H}), 1.39-1.33(\mathrm{~m}, 42 \mathrm{H}), 0.92-0.87(\mathrm{~m}, 30 \mathrm{H})$.
${ }^{13} \mathrm{C}$ NMR ( $100 \mathrm{MHz}, \mathrm{CDCl}_{3}, \delta$ in ppm): $\delta 149.14,146.71,144.15,131.90,131.78,131.65$, $128.72,128.68,123.84,120.53,107.26,106.78,99.41,69.81,36.12,31.85,31.62,31.09$, 29.58, 26.00, 22.81, 22.68, 14.22, 14.19.

HRMS (MALDI) for $\mathrm{C}_{130} \mathrm{H}_{165} \mathrm{~N}_{3} \mathrm{O}_{7}(\mathrm{M}+\mathrm{H})$ : calculated - 1882.2759; found-1882.2706.

## Compound 9b:

FT-IR (cm ${ }^{-1}$ ): 2959.70, 2928.25, 2856.63, 2210.10, 1737.80, 1616.08, 1512.89, 1468.40, 1434.49, 1379.43, 1262.10, 1170.45, 1085.90, 1042.32, 838.32, 802.90, 726.71, 597.89, 558.85 .
${ }^{1} \mathrm{H}$ NMR ( $400 \mathrm{MHz}, \mathrm{CDCl}_{3}, \delta$ in ppm): $\delta 7.83-7.81(\mathrm{~m}, 6 \mathrm{H}), \delta 7.54-7.48(\mathrm{~m}, 10 \mathrm{H}), \delta 7.27$ (s, $1 \mathrm{H}), \delta 7.17-7.68(\mathrm{~m}, 10 \mathrm{H}), \delta 4.35-4.32(\mathrm{t}, 2 \mathrm{H}, J=6.12 \mathrm{~Hz}), \delta 4.28-4.20(\mathrm{~m}, 14 \mathrm{H}), \delta 3.05-3.01$ $(\mathrm{t}, 2 \mathrm{H}, J=7.16 \mathrm{~Hz}), \delta 2.66-2.62(\mathrm{~m}, 10 \mathrm{H}), 2.34-2.31(\mathrm{t}, 2 \mathrm{H}, J=7.06 \mathrm{~Hz}), 1.95-1.87(\mathrm{~m}, 12 \mathrm{H})$, $1.80-1.77(\mathrm{~m}, 2 \mathrm{H}), 1.61-1.57(\mathrm{~m}, 22 \mathrm{H}), 1.38-1.28(\mathrm{~m}, 46 \mathrm{H}), 0.92-0.89(\mathrm{~m}, 30 \mathrm{H})$.
${ }^{13} \mathrm{C}$ NMR ( $100 \mathrm{MHz}, \mathrm{CDCl}_{3}, \delta$ in ppm): $\delta 160.25$, 148.97 , $147.41,144.18,131.89,131.77$, $131.69,128.91,128.68,123.68,120.99,120.55,120.15,107.53,107.26,99.70,87.17,84.21$, 69.78, 50.32, 36.12, 31.84, 31.62, 31.12, 31.09, 30.60, 29.85, 29.57, 29.24, 29.08, 26.63, 26.33, 26.01, 2282, 22.68, 14.22, 14.20.

HRMS (MALDI) for $\mathrm{C}_{132} \mathrm{H}_{169} \mathrm{~N}_{3} \mathrm{O}_{7}(\mathrm{M}+\mathrm{H})$ : calculated - 1910.3072; found-1910.3152.

## 4. FT-IR spectral data

Fig. S13 FT-IR spectra of compound 8a and 9a, respectively.

## 5. DSC Thermograms

Fig. S14. DSC thermogram for the pure series of compound: (a) 8a; (b) 8b; (c) 8c; (d) 9a; (e) 9b; (f) 9c, recorded with the scan rate of $10^{\circ} \mathrm{C} / \mathrm{min}$.

## 6. X-ray data

Fig. S15 X-Ray diffraction pattern for the pure compounds: (a) $\mathrm{Col}_{\mathrm{r}}$ phase at $25^{\circ} \mathrm{C}$ for 8a; (b) $\mathrm{Col}_{\mathrm{r}}$ phase at $25^{\circ} \mathrm{C}$ for $\mathbf{8 b}$; (c) weak smectic phase at $25^{\circ} \mathrm{C}$ for $\mathbf{8 c}$.

Fig. S16 X-Ray diffraction pattern for the pure compounds: (a) $\mathrm{N}_{\mathrm{C}}$ phase at $10.0^{\circ} \mathrm{C}$ for 8a; (b) $\mathrm{N}_{\mathrm{C}}$ phase at $5.0^{\circ} \mathrm{C}$ for $9 \mathrm{9a}$; (c) smectic phase at $-20.0^{\circ} \mathrm{C}$ for $\mathbf{9 c}$; POM textures on upon cooling: (d) for $8 \mathbf{8 a}$ at $10.4^{\circ} \mathrm{C}$; (e) for $9 \mathbf{a}$ at $5.8^{\circ} \mathrm{C}$; (f) for $9 \mathbf{c}$ at $-20.0^{\circ} \mathrm{C}$, recorded with the rate of $10^{\circ} \mathrm{C} / \mathrm{min}$.

For compound $\mathbf{8 a}$ at $10.0^{\circ} \mathrm{C}$ (Fig. S16a): The first peak in color purple with spacing 22.77 $\AA$ is due to average column-column separation. The second peak in black color is mainly due to background and it is not our concern. The third peak in orange color with spacing $4.60 \AA$ A , appearing mainly due to fluid alkyl chain to chain correlation. However, the fourth peak in cyan color with spacing $4.40 \AA$ correlates the average partial chain to chain spacing. Interestingly, the seventh peak in color green with spacing $3.53 \AA$ attributing the disc to disc separation in column indicating the occurrence of columnar nematic ( $\mathrm{N}_{\mathrm{C}}$ ) phase. Further, the fifth (in color yellow) and sixth (in color cyan) peaks with spacing $3.99 \AA \&$ 3.80 Å appearing most possibly due to other kind of arrangement of alkyl chains. Red color curve represents the combine results of all peaks and well fitted to experimental X-Ray diffraction data. The similar behaviour of diffractogram has been observed in case of $\mathbf{8 b}$.

For compound $9 \mathbf{9}$ at $5.0^{\circ} \mathrm{C}$ (Fig. S16b): The first peak in color purple with spacing 21.23 $\AA$ is due to average column-column separation. The second peak in black color is mainly due to background and it is not our concern. The third peak in orange color with spacing $4.78 \AA$, appearing mainly due to fluid alkyl chain to chain correlation. However, the fourth peak in cyan color with spacing $4.42 \AA$ correlates the average partial chain to chain spacing. Interestingly, the sixth peak in color green with spacing $3.55 \AA$ attributing the disc to disc separation in column suggesting the formation of columnar nematic $\left(\mathrm{N}_{\mathrm{C}}\right)$ phase. Further, the fifth in color yellow peak with spacing $4.01 \AA$ appearing most possibly due to different kind of arrangement of alky chains. Red color curve represents the combine results of all peaks and well fitted to experimental X-Ray diffraction data. The similar behaviour of diffractogram has been observed in case of $\mathbf{9 b}$.

For 9 c at $-20.0^{\circ} \mathrm{C}$ (Fig. S16c): The first peak at $20.09 \AA$ was observed in a similar manner to its diffractogram at room temperature. The additional peak at $4.43 \AA$ correlates the average partial chain to chain spacing. There was no core to core peak appears in the wide angle region which excludes the possibility of $\mathrm{N}_{\mathrm{C}}$ phase. The similar behaviour of diffractogram has been observed in case of $\mathbf{8 c}$.

Fig. S17 X-Ray diffraction pattern for 2:1 ratio of TNF: compound complex: (a) Col $_{h}$ phase at $25^{\circ} \mathrm{C}$ for $\mathbf{8 a} / \mathbf{T N F}$ complex; (b) Colh phase at $25^{\circ} \mathrm{C}$ for $\mathbf{8 b} / \mathbf{T N F}$ complex; (c) Col ${ }_{h}$ phase at $25^{\circ} \mathrm{C} \mathrm{8c/TNF}$ complex.

Fig. S18 Variation of lattice parameter for (a) pure compound $\mathbf{8 a}, \mathbf{8 b}$ and $\mathbf{8 c}$; (b) 2:1 TNF/compound complex: 8a/TNF, 8b/TNF and 8c/TNF.

Table S1. The Indices observed and calculated $d$-spacings and planes of the diffraction peaks for the 2D columnar cantered rectangular ( $\mathrm{Col}_{\mathrm{r}}$ ) phase observed for the pure compound of series of compound $\mathbf{8}$.

| compound | (hk) | d-spacing Experimental dobs (A) | d-spacing Calculated dcal (A) | Lattice parameter, (A) | Phase |

## 7. Absorption and Emission studies

7.1 Absorption and emission studies in solution state:

Fig. S19 Absorption spectra of compound $\mathbf{8 a}$ (a); $\mathbf{8 b}$ (b); $\mathbf{8 c}$ (c) $\mathbf{9 a}$ (d); $\mathbf{9 b}$ (e); $\mathbf{9 c}$ (f) in $\mathbf{C H C l}_{3}$ solution.

Fig. S20 Emission spectra of compound $\mathbf{8 a}$ (a); $\mathbf{8 b}$ (b); $\mathbf{8 c}$ (c) $\mathbf{9 a}$ (d); 9b (e); $\mathbf{9 c}$ (f) in $\mathbf{C H C l}_{3}$ solution.

### 7.2 Absorption and emission studies in solid state:

Fig. S21 Emission spectra of compound $\mathbf{8 a}$ (a); $\mathbf{8 b}$ (b); $\mathbf{8 c}$ (c) $\mathbf{9 a}$ (d); 9b (e); $\mathbf{9 c}$ (f) in thin film state.

## 8. Quantum yield Calculation (Relative) ${ }^{1}$

The details are reported elsewhere ${ }^{1}$. Briefly, the calculation details are below and reproduced as mentioned in our earlier manuscript. ${ }^{1}$
"Relative quantum yield was obtained according to well-known procedure by using quinine sulphate in $0.1 \mathrm{M} \mathrm{H}_{2} \mathrm{SO}_{4}$ solution as the standard. Quantum yield values were calculated according to the following equation:

$$
\mathrm{Q}_{\mathrm{S}}=\mathrm{Q}_{\mathrm{R}} \times\left(\mathrm{m}_{\mathrm{S}} / \mathrm{m}_{\mathrm{R}}\right) \times\left(\mathrm{n}_{\mathrm{S}} / \mathrm{n}_{\mathrm{R}}\right)^{2},
$$

Where Q: Quantum yield, m: slope of the plot of integrated fluorescence intensity vs absorbance, $\mathrm{n}=$ refractive index ( 1.445 for $\mathrm{CHCl}_{3}$ and 1.33 for distilled water).

Subscript R refers to the reference fluorophore i.e quinine sulphate in $0.1 \mathrm{M} \mathrm{H}_{2} \mathrm{SO}_{4}$ and subscript $S$ refers to the sample under investigation. In order to minimise the re-absorption effects, absorbance value was kept below 0.15 at the excitation wavelength of 337 nm .

Quantum yield of quinine sulphate in $0.1 \mathrm{M} \mathrm{H}_{2} \mathrm{SO}_{4}$ solution is 0.54 . After substituting the appropriate values, the simplified equation is:
$\mathrm{Q}_{\mathrm{S}}=0.54 \times\left(\mathrm{m}_{\mathrm{S}} / \mathrm{m}_{\mathrm{R}}\right) \times(1.445 / 1.33)^{2}$
$=0.5867 \mathrm{x}\left(\mathrm{m}_{\mathrm{S}} / \mathrm{m}_{\mathrm{R}}\right)$ "
Table S3 Quantum yield values of compound 5

| Entry | $\mathbf{m}_{\mathbf{S}}$ | $\mathbf{m}_{\mathbf{R}}$ | $\mathbf{Q}_{\mathbf{S}}^{\mathbf{a , b , \mathbf { c }}}$ |
| :---: | :---: | :---: | :---: |
| $\mathbf{8 a}$ | $10.957 \times 10^{7}$ | $13.937 \times 10^{7}$ | 0.461 |
| $\mathbf{8 b}$ | $11.198 \times 10^{7}$ | $13.937 \times 10^{7}$ | 0.471 |
| $\mathbf{8 c}$ | $10.358 \times 10^{7}$ | $13.937 \times 10^{7}$ | 0.436 |
| $\mathbf{9 a}$ | $8.261 \times 10^{7}$ | $13.937 \times 10^{7}$ | 0.348 |
| $\mathbf{9 b}$ | $9.846 \times 10^{7}$ | $13.937 \times 10^{7}$ | 0.414 |
| $\mathbf{9 c}$ | $10.125 \times 10^{7}$ | $13.937 \times 10^{7}$ | 0.426 |

${ }^{\mathrm{a}}$ Measured in $\mathrm{CHCl}_{3}$.
${ }^{\mathrm{b}}$ Excited at absorption maxima.
${ }^{\mathrm{c}}$ Standard Quinine sulphate $\left(\mathrm{Q}_{\mathrm{f}}=0.54\right)$ in $0.1 \mathrm{M} \mathrm{H}_{2} \mathrm{SO}_{4}$.

Fig. S22 Plots of integrated photoluminescence intensity vs absorbance of compounds 8a (a); $\mathbf{8 b}$ (b); 8c (c); 9a (d); 9b (e); 9c (f) measured in HPLC chloroform excited at 337 nm .

## 9. Fluorescence decay measurements

The decay curves were bi-exponential and analysed by using standard method of non-linear least square fitting method. The quality of fits was judged using statistical parameters, reduced $\chi^{2}$ value and the residual data.

Fig. S23 Fluorescence decay spectra of compounds (a) 8a; (b) 8b; (c) 8c; (d) 9a; (e) 9b; (f) 9c; for $\lambda_{\mathrm{exc}}=337 \mathrm{~nm} \& \lambda_{\mathrm{ems}}=447 \mathrm{~nm}$ in micromolar chloroform solution.
