Figure S1. Synthesis of SiO₂/EG liquid photonic crystals by liquid-liquid extraction.

Figure S2. Reflection spectra of SiO₂/EG liquid PC as the incident angle and reflected angle being tuned from 0° to 60°

Figure S3. Digital photos, optical microscopic images, and reflection spectra of liquid colloidal photonic crystals prepared by extraction with a) hexane/acetone, b) toluene/acetone, and c) hexane/n-hexanol.

Figure S4. Digital photos, optical microscopic images, and reflection spectra of liquid colloidal photonic crystals prepared by extraction with a) toluene/n-hexanol, b) hexane/ethyl acetate, and c) toluene/ethyl acetate.

Figure S5. TEM images of a) SiO₂, b) ZnO, c) CeO₂, and d) PS particles

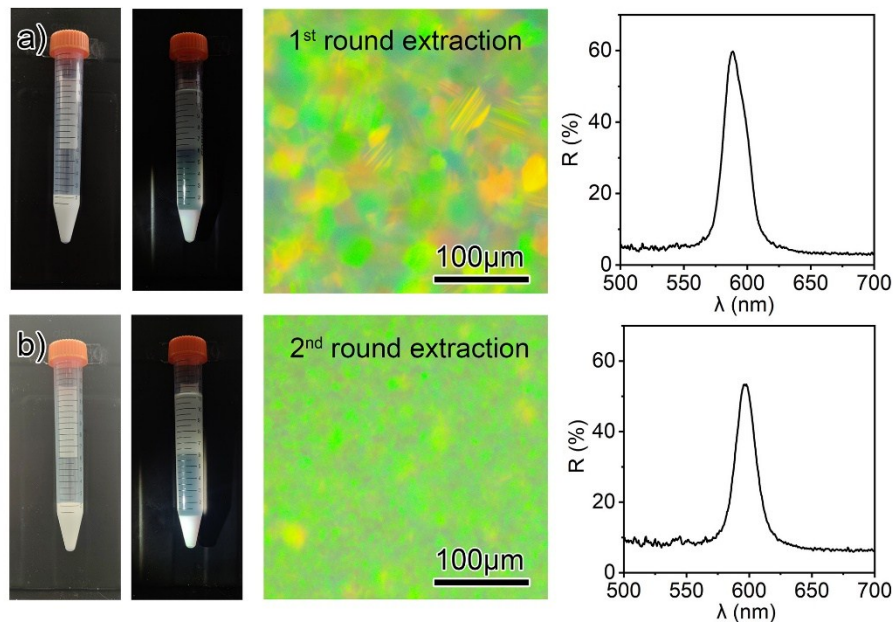

Figure S6. The extractant used in the 1st round synthesis of SiO₂/EG liquid PCs is recycled by distillation and used for the 2nd round synthesis of liquid PCs.

Table S1. Calculation of the extraction efficiencies in Figure 3a when two-component extractants (n-hexanol + cyclohexane) with increasing volume fraction of n-hexanol were used for preparation of liquid PC.
