^a D^a, Crystalline size of anatase calculated from (101) by the Scherrer equation.

^b BET SA, BET surface area calculated from the linear part of the BET plot.

^c V_t, total pore volume obtained from the volume of N₂ adsorbed at 0.99 P/P₀.

^d V_f, framework pore volume obtained from the volume of N₂ adsorbed at end point of the first hysteresis loop (relative pressure shown in the parentheses).

^e V_α, textural pore volume obtained from the difference (V_t-V_f).
