## 1. Measurements

Electronic absorption spectra were recorded on a JASCO model U-best V-560 or V-570 spectrometer. ${ }^{1} \mathrm{H}$ NMR spectra were recorded at 293 K in $\mathrm{CDCl}_{3}$ or toluene- $d_{8}$ on a JEOL Type GSX-270 spectrometer, operating at 270.05 MHz , using a residual non-deuterated solvent as an internal reference. Matrix-assisted laser desorption/ionization time-of-flight mass spectrometry (MALDI-TOF-MS) was performed on an Applied Biosystems BioSpectrometry Workstation ${ }^{\mathrm{TM}}$ model Voyager-DE ${ }^{\text {TM }}$ STR spectrometer using dithranol as a matrix.
