General:

THF was distilled from sodium/benzophenone. Hexane and dichloromethane were distilled from CaH₂. TLC was carried out with pre-coated Merck 60 F₂₅₄ plates. Silica gel 60 (Merck, 400-630 mesh) was used for column chromatography. Infrared spectra were recorded on a Bio-Rad FTS 165 FTIR spectrometer. Liquid samples were examined as film between NaCl salt plates. ¹H and ¹³C NMR spectra were taken in CDCl₃ on Bruker DPX300 and Bruker AMX500 and referenced to internal tetramethylsilane (SiMe₄). Chemical shifts for ¹H NMR spectra are reported as δ in units of parts per million (ppm) downfield from SiMe₄ (δ 0.0) and relative to the signal of chloroform-d (δ 7.2600, singlet). Multiplicities were given as: s (singlet); brs (broad singlet); d (doublet); t (triplet); q (quartet); dd (doublets of doublet); dt (doublets of triplet); dtq (doublets of triplets of quartet); or m (multiplets). The number of protons (n) for a given resonance is indicated by nH. Coupling constants are reported as a J value in Hz. Carbon nuclear magnetic resonance spectra (¹³C NMR) are reported as δ in units of parts per million (ppm) downfield from SiMe₄ (δ 0.0) and relative to the signal of chloroform-d (δ 77, triplet).

Mass spectral analyses were carried out on a VG 7035 micromass mass spectrophotometer at a source temperature of 200 °C and at an ion current of 70 eV. Mass spectral data were reported in units of mass to charge (m/z) and % intensity.

(E)-methyl 2,4,4-trimethylpent-2-enoate

To a mixture of methyl propionate (24.1 mL, 0.25 mol) and sodium sand (1.45 g, 0.063 mol) at 0 °C was added catalytic amount of absolute ethanol (0.4 mL). trimethylacetaldehyde (4.3 g, 5.43 mL, 50 mmol) was added dropwise. The reaction mixture was stirred at 0 °C to room temperature for 12 h. After the reaction was completed, the reaction mixture was poured into saturated NH₄Cl and extracted with ether (x3). The combined organic extracts washed with brine, dried over MgSO₄ and concentrated. The residue was purified by flash chromatography on silica gel, elution with hexane/ethyl acetate, 20:1, to afford the pure product (7.78 g, 90%) as a yellowish oil.

Dess-Martin periodinane oxidation: To a solution of Dess-Martin reagent (48 mg, 0.114 mmol) in anhydrous CH₂Cl₂ (1 mL) was added dropwise of **24b** in CH₂Cl₂ at 0 °C. The reaction mixture was stirred under nitrogen at 0 °C for 2h. After completion, the reaction mixture was diluted with ether and poured slowly into a Na₂S₂O₃:NaHCO₃ (1:1) solution and stirred for 5 minutes and extract with ether. The combine etherate layer was washed with NaHCO₃, brine and dried over anhydrous MgSO₄. Concentration in *vacuo* provided the aldehyde and directly used for next step without purification.

The crude aldehyde was dissolved in a mixture of *t*-BuOH and 2-methyl-2-butene (3:1, 9 mL), and pH=4 NaH₂PO₄ water solution (3 mL) was added, followed by NaClO₂ (9.3 mg, 0.084 mmol). The mixture was stirred at room temperature for half an hour, pour into ice-water and extracted with ethyl acetate (3x). The combine organic layer was washed with brine, dried over MgSO₄ and concentrated. Purification through flash column chromatography provided **25b** (38.6 mg, 84%) as a colorless oil.

To a solution of the acid **25b** (78 mg, 0.128 mmol) in 1 mL THF was added morpholine (0.11 mL, 1.28 mmol) and Pd(PPh₃)₄ (15 mg, 0.015 mmol). After stirring for 30 min at room temperature, the mixture was diluted with pH=6 buffer solution and extracted with CHCl₃ (x3). The combine organic extract was dried (Na₂SO₄), filtered and concentrated to afford the crude amino acid.

The crude amino acid was dissolved in DMF (50 mL) and cooled to 0 °C. NaHCO₃ (50 mg, 0.706 mmol) and DPPA (72 μL, 0.321 mmol) were added, the mixture solution was stirred at 0 °C for 3 days. The solution was diluted with ethyl acetate, wash with KHSO₄ solution, H₂O, NaHCO₃ and brine. The organic layer was dried (Na₂SO₄), filtered and concentrated. The crude product was purified by flash chromatography on silica gel (Hexane/ethyl acetate, 5:1 to 2:1) to give the desired product **1b** (40.7 mg, 63%) as a colorless oil.
