## General procedure and materials.

All manipulations were performed under an argon atmosphere using standard Schlenk-type glasswares on a dual-manifold Schlenk line. The reagents and the solvents for catalytic reactions were dried and purified before use by usual procedures. ${ }^{1} \quad{ }^{1} \mathrm{H}$ NMR and ${ }^{13} \mathrm{C}\left\{{ }^{1} \mathrm{H}\right\}$ NMR spectra were measured with a Bruker ARX-400, a JEOL ECX-400 or a JEOL ECA-600 spectrometers. MALDI-TOF mass spectra were measured with a Bruker Autoflex instrument. FD mass spectra were measured with a JEOL JMS-SX102A instrument at the GC-MS \& NMR Laboratory of Faculty of Agriculture, Hokkaido University. ESI mass spectra were measured with a JEOL JMS-HX110 instrument at the Center for Instrumental Analysis, Hokkaido University. Elemental analyses were also carried out at the same center. Preparative recycling gel permeation chromatography (GPC) was performed with a JASCO LC9104. GC analysis was carried out using Shimadzu GC-17A
equipped with Shimadzu CPB1 ( 25 m length, 0.25 mm i.d.) or CPB10 ( 25 m length, 0.25 mm i.d.) columns.

## Synthesis of 8a:

In a $300-\mathrm{cm}^{3}$ two-neck flask under an argon atmosphere, benzophenone imine $\left(3.5 \mathrm{~cm}^{3}, 21 \mathrm{mmol}\right)$ was added to a suspension of $7 \mathrm{a}(10 \mathrm{~g}, 18.7 \mathrm{mmol})$, rac-BINAP $(466 \mathrm{mg}, 0.75 \mathrm{mmol}), \mathrm{Pd}(\mathrm{DBA})_{2}$ $(95 \mathrm{mg}, 0.19 \mathrm{mmol})$ and ${ }^{\mathrm{t}} \mathrm{BuONa}(2.7 \mathrm{~g}, 28 \mathrm{mmol})$ in degassed toluene $\left(100 \mathrm{~cm}^{3}\right)$ at $80^{\circ} \mathrm{C}$. The mixture was stirred at $80^{\circ} \mathrm{C}$ under argon for 2 d . After removal of the solvent, a crude product was purified by silica gel column chromatography using $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ as an eluent. Removal of volatiles gave the $N$-arylated imine as a yellow solid. It was dissolved in THF ( $500 \mathrm{~cm}^{3}$ ) and 1 N HCl aq. $\left(150 \mathrm{~cm}^{3}\right)$ was added to the solution. The mixture was stirred at room temperature for 15 h. An aqueous saturated solution of $\mathrm{NaHCO}_{3}\left(300 \mathrm{~cm}^{3}\right)$ was added to the reaction mixture and the organic layer was separated after vigorous shaking. The aqueous layer was extracted with AcOEt
$\left(300 \mathrm{~cm}^{3} \times 2\right)$ and the washing liquid was combined with the organic layer, which was dried over anhydrous $\mathrm{MgSO}_{4}$. After removal of volatiles, a crude product was obtained. It was dissolved in $\mathrm{CH}_{2} \mathrm{Cl}_{2}\left(20 \mathrm{~cm}^{3}\right)$ and the solution was poured into $\mathrm{MeOH}\left(600 \mathrm{~cm}^{3}\right)$. The product 8a was collected by filtration as a white precipitate, washed with MeOH and dried in vacuo. ## Synthesis of 5b:

In a $100-\mathrm{cm}^{3}$ two-necked flask under argon atmosphere, a solution of $\mathbf{4 b}(652 \mathrm{mg}, 0.23 \mathrm{mmol})$ and $\mathrm{Ag}_{2} \mathrm{O}(33 \mathrm{mg}, 0.14 \mathrm{mmol})$ in 1,2-dichloroethane $\left(20 \mathrm{~cm}^{3}\right)$ was stirred at $50^{\circ} \mathrm{C}$ for 9 h under Ar . At room temperature, $[\mathrm{RhCl}(\mathrm{COD})]_{2}(70 \mathrm{mg}, 0.14 \mathrm{mmol})$ was added to the solution and the mixture was stirred at room temperature for 18 h . After filtration through Celite to remove insoluble materials, a residue obtained by evaporation was purified by silica gel column chromatography using $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ /hexane (3/7) as an eluent. Removal of volatiles gave a pale-orange solid. General procedure for the hydrosilylation (entry 1 in Table 1): A mixture of $\mathbf{5 a}(0.01 \mathrm{mmol}, 12$ mg ), $\mathrm{CH}_{2} \mathrm{Cl}_{2}\left(1 \mathrm{~cm}^{3}\right)$, 2-cyclohexen-1-one ( $1 \mathrm{mmol}, 9.7 \times 10^{-2} \mathrm{dm}^{3}$ ), and bibenzyl ( $0.25 \mathrm{mmol}, 45.6$ mg ) as an internal standard was placed in a $10-\mathrm{cm}^{3}$ Schlenk tube under an Ar atmosphere and the
resulting solution was stirred for 5 min . Then, $\mathrm{Ph}_{2} \mathrm{SiH}_{2}\left(1.2 \mathrm{mmol}, 0.22 \mathrm{dm}^{3}\right)$ was added via a syringe and the reaction mixture was stirred at room temperature for 24 h . After removal of volatiles under vacuum at $-30{ }^{\circ} \mathrm{C}$, a residue was dissolved in $\mathrm{Et}_{2} \mathrm{O}\left(1 \mathrm{~cm}^{3}\right)$. The solution was further stirred for 1 h with $\mathrm{K}_{2} \mathrm{CO}_{3}(1 \mathrm{mg})$ and $\mathrm{MeOH}\left(1 \mathrm{~cm}^{3}\right)$. Total yield (77\%) and a ratio (91/9) of cyclohexanone and 2-cyclohexen-1-ol were determined by a GC (Shimadzu CPB10 column, 25 m length, 0.25 mm i.d.).

X-ray Diffraction Study. Single crystals of $\mathbf{5 a} \cdot \mathrm{C}_{5} \mathrm{H}_{12}$ suitable for X-ray diffraction study were obtained by diffusion of $n$-pentane into $\mathbf{5 a}$ in $\mathrm{CH}_{2} \mathrm{Cl}_{2}$. Data were collected on a Rigaku/Saturn70 CCD diffractometer using graphite-monochromated Mo $\mathrm{K} \alpha$ radiation $(\lambda=0.71070 \AA$ ) at 113 K , and processed using CrystalClear (Rigaku). The structures were solved by a direct method (SIR92) and refined by full-matrix least-square refinement on $F^{2}$. The non-hydrogen atoms except for solvated molecules were refined anisotropically. All hydrogen atoms were located on the calculated positions and not refined. All calculations were performed using the CrystalStructure software package. Crystal data for $5 \mathbf{a} \cdot \mathrm{C}_{5} \mathrm{H}_{12}: \mathrm{C}_{88} \mathrm{H}_{76} \mathrm{ClN}_{2} \mathrm{Rh}, M=1299.9, T=113 \mathrm{~K}$, triclinic, space group $P 1$ (No. 2), $a=14.85(2), b=20.51(2), c=25.04(2) \AA, \alpha=79.38(7), \beta=71.05(9), \gamma=$ 81.10(10) ${ }^{\circ}, U=7054(1) \AA^{3}, Z=4, \mu(\mathrm{Mo} K \alpha)=3.30 \mathrm{~cm}^{-1}$, Unique reflections 31888 , Observed reflections $16076(I>3 \sigma(I)), R 1, w R 2=0.056,0.164, G O F=1.01 . \quad$ CCDC Number 617650.

## Calculation

An optimized structure of $\mathbf{5 b}$ was obtained by $\mathrm{ONIOM}^{6}$ calculations. In the ONIOM calculation, the molecular system of $\mathbf{5 b}$ was divided into two layers. The high layer was assigned to $\mathbf{5 b}$ with R $=\mathrm{C}_{6} \mathrm{H}_{4}$ for $\mathrm{B}^{2} \mathrm{LYP}^{7} / \mathrm{LANL} 2 \mathrm{DZ}^{8}$ calculation. The low layer contains the rest dendritic frameworks of $\mathbf{5 b}$ for molecular mechanics calculation using UFF force field was carried out on the layer. ${ }^{9}$ All calculations were performed with the Gaussian 03 program $^{10}$ on a HIT HPC-IA642/SS 1.3/3D-4G.
