Resin **4** (83 mg; 36.5 µmol.) was treated with 20 mL of TFA/DCM/TIS (50: 49: 1) mixture at rt for 4 h. Resin was then filtered and washed with TFA (2 x 10 mL). Filtrate and washings were concentrated (to #2 mL) under reduced pressure, then Et₂O (30mL) was added. The precipitate was filtered off, washed with CHCl₃ (4 x 20 mL) and dried under high vacuum, providing **5** (isomeric mixture) as a deep purple solid (8 mg; 27%). R_f = 0.33 (DMF/TFA/water; 8:1:1). Resin **7** (79 mg; 56 µmol.) was stirred for 4 h at rt in a mixture of TFA/DCM/TIS (50:49:1), then filtered off and washed with TFA (2 x 10mL). Pooled filtrate and washings were concentrated (to #2 mL) under reduced pressure, then Et₂O (30 mL) was added. The purple solid was filtered off, washed with CHCl₃ (4 x 20 mL) and dried overnight in vacuum, providing 5 mg of **8** (isomeric mixture) as a purple solid (10%). R_f = 0.30 (DMF/TFA/water 8:1:1).
