## Experimental Section

*Reagents and materials.* Synthesis and characterization of all corroles used in this paper have already been described in the literature.<sup>1</sup> N,N-dimethylformamide and DCM were purchased from Acros and were distilled over calcium hydride prior spectroscopic experiments.

*Spectroscopy Measurements.* UV-Vis data were obtained on Jasco-720 or Cary 17 spectrophotometers. MCD data were recorded using OLIS DCM 17 CD spectropolarimeter with a 1.4 T DeSa magnet. The MCD spectra were measured in mdeg = [θ] and converted to Δε ( $M^{-1} cm^{-1} T^{-1}$ ) using the regular conversion formula:  $\Delta\epsilon=\theta/(32980 \cdot Bdc)$ , where B is the magnetic field, d is the path length, and c is the concentration. Complete spectra were recorded at room temperature in parallel and anti-parallel directions with respect to the magnetic field. In all cases UV-vis spectra were recorded for samples before and after MCD experiments in order to ensure that samples were stable during experiments.

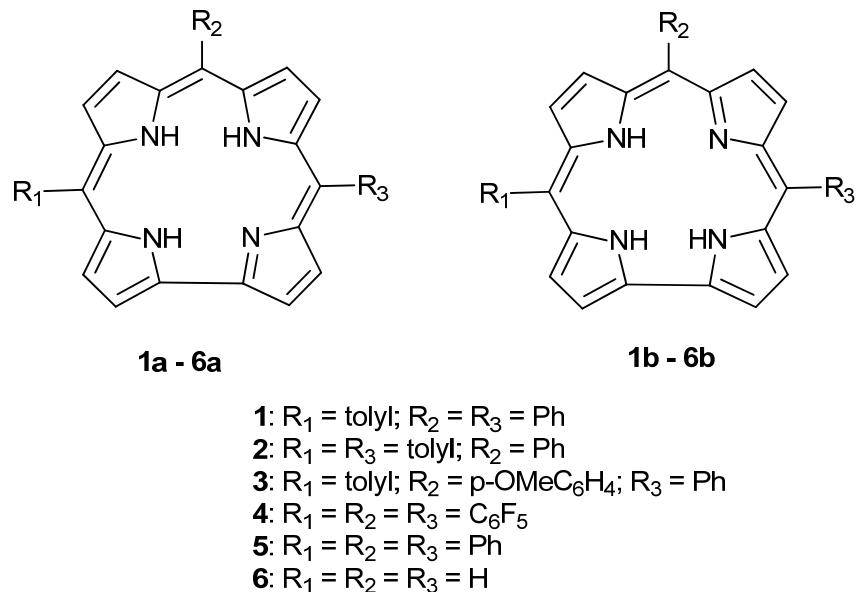

*DFT-PCM and TDDFT-PCM Calculations.* Calculations were carried out on **5a** and **5b** as well as the simplified tautomers **6a** and **6b** where the phenyl groups are replaced with hydrogen atoms at the three *meso* carbon positions. Geometry optimizations were conducted for both point groups using the polarized continuum model (PCM) approach<sup>2</sup> and DCM and DMF were used as solvent. Converged geometries were tested by frequency calculations in order to confirm the nature of stationary points. Geometries were not restricted in these calculations. All geometry optimizations, single-point DFT-PCM and TDDFT-PCM calculations were conducted using a pure BP86 functional.<sup>3</sup> The first 50 states were considered in all PCM-TDDFT calculations. In all cases, 6-31G(d) basis set was used for all atoms.<sup>4</sup> All calculations were performed using Gaussian 09 software.<sup>5</sup> TDDFT predicted UV-vis spectra profiles were modeled using

GaussView software<sup>6</sup> and 800 cm<sup>-1</sup> bandwidth for all bands. Molecular orbital analysis was conducted using the QMForge program.
