Supplementary Information

for

Erythrose revealed as furanose forms

Carlos Cabezas, Isabel Peña, Adam M. Daly, and José L. Alonso

Contents

Tables S1: Table of molecular properties predicted *ab initio* for the lowest-energy α and β -furanose conformers of D-erythrose.

Tables S2: Table of molecular properties predicted *ab initio* for the lowest-energy linear conformers of D-erythrose.

Tables S3: Transition frequencies of the rotamer A of erythrose.

Tables S4: Transition frequencies of the rotamer B of erythrose.

Table S5. Cartesian coordinates for the three low-energy conformers of D-erythrose. The geometries have been optimized *ab initio* at the MP2/6-311++G(d,p) level of theory.

Complete Reference 19.
