Electronic Supplementary Information

Table S1: Important families of membrane-bound metal transporters with zinc-transporting members.

Table S2: Examples of proteins involved in intracellular (including periplasmic) zinc binding.

Table S1. Important families of membrane-bound metal transporters with zinc-transferring members. Other metals that have also been shown to be transported by members of these families are also listed. The column “direction” is with reference to the cytosol. The given locations are non-exhaustive. Abbreviations: PM: plasma membrane, OM: Outer membrane, IMM: Inner mitochondrial membrane; V: vacuole membrane; G: Golgi apparatus membrane; PMF: proton-motive force.
