

Fig.S1 SEM image of the luminescent hybrid organosilica obtained by reacting Eu^{3+} ions with TTA-Si under reflux for 4h. The molar ratio of TTA-Si to Eu^{3+} ions is 1:1

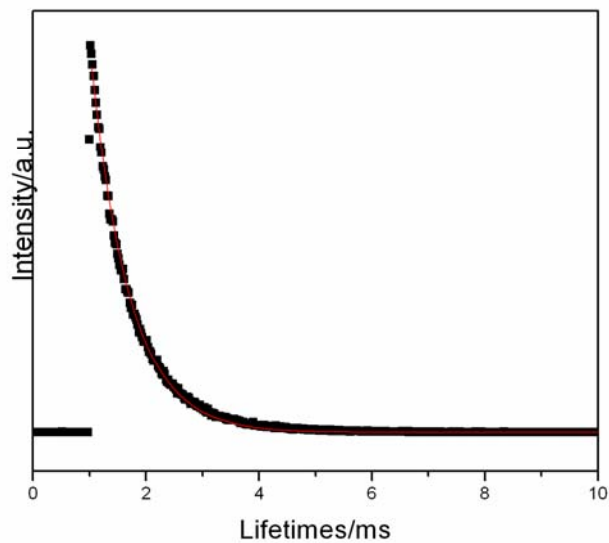

Fig.S2 Decay curve of luminescent organosilica with rectangular-plate morphology
squares: experimental data; solid line: fitted according to $I = I_0 + A \exp[-(t - t_0)/\tau]$
