Recent advances in anion- π interactions

Arturo Robertazzi,^b Florian Krull,^b Ernst-Walter Knapp^b and Patrick Gamez^{*a}

Table of Contents	Page
Table S1. Contact distances characterizing the anion- π interaction between a SbF_6^- and a 1,3,5-triazine ring in the CSD structure MACHAA.	S2
Table S2. Contact distances characterizing the anion- π interaction between a AsF_6^- and a pentafluoro aromatic ring in the CSD structure HOHKAQ.	S2
Figure S1. Interactions between chloride or phosphate and amino acids found in the PDB.	S3
Figure S2. Scatter plot of the $d_{\text{A}-\pi}$ (and $D_{\text{A}-\pi}$) versus $\alpha_{\text{A}-\pi}$ for the chloride- π contacts that fulfill the search criteria.	S4
Figure S3. Scatter plot of the $d_{\text{A}-\pi}$ (and $D_{\text{A}-\pi}$) versus $\alpha_{\text{A}-\pi}$ for the phosphate- π contacts that fulfill the search criteria. As a reference the sums of the van der Waals radii are $r_{\text{N}-\text{O}}=3.07 \text{ \AA}$, $r_{\text{C}-\text{O}}=3.22 \text{ \AA}$.	S5
Figure S4. Number of anion- π contacts as a function of the threshold.	S6
References	S7

Table S1. Contact distances characterizing the anion- π interaction between a SbF_6^- and a 1,3,5-triazine ring. Representation (in space-filling mode) of the molecular structure of 1-fluoro-2,4,6-trimethoxy-1,3,5-triazinium hexafluoroantimonate (CSD refcode MACHAA).¹

Anion- π contact	Distance (Å)
F2-C3	2.831(5)
F5-C2	2.886(5)
F4-C1	2.858(6)

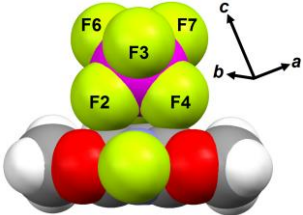

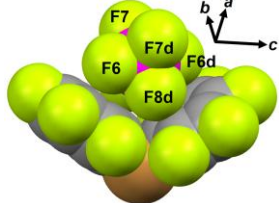

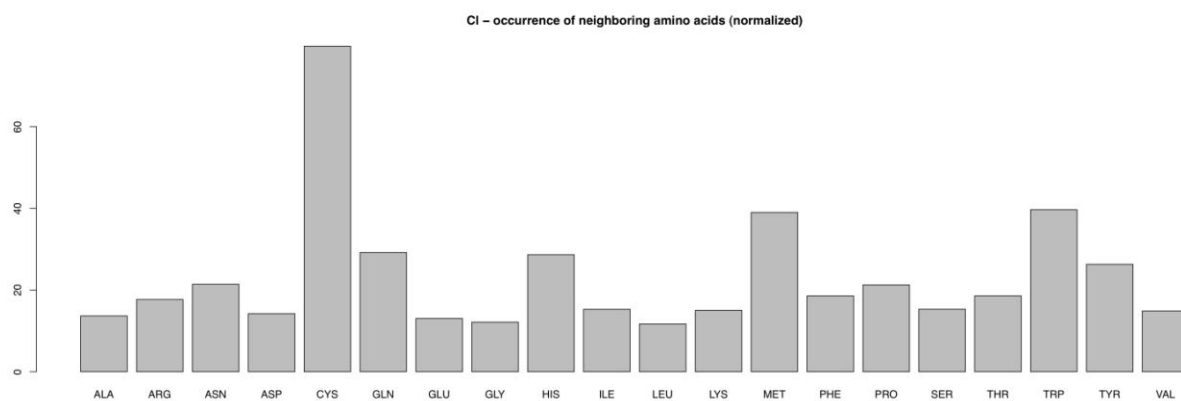

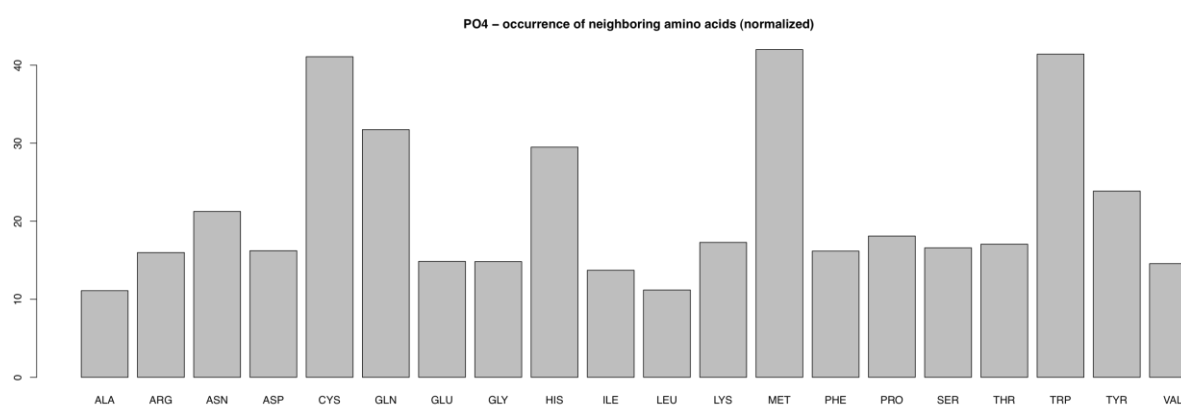

Table S2. Contact distances characterizing the anion- π interaction between an AsF_6^- and a pentafluoro aromatic ring. Representation (in space-filling mode) of the molecular structure of bis(pentafluorophenyl)bromonium hexafluoroarsenate (CSD refcode HOHKAQ).² Symmetry operation: $d = -1/2+x, 3/2-y, 7/4-z$

Anion- π contact	Distance (Å)
F8-C6	2.906(9)
F6-C3	3.167(9)
F8-C1	3.035(8)

A

B

Figure S1. Most occurring residue types around the interacting anion (chloride or phosphate, cut-off equal to 6 Å). These data are normalized considering the occurrence of the residue type inside the protein in which each interacting anion is found.

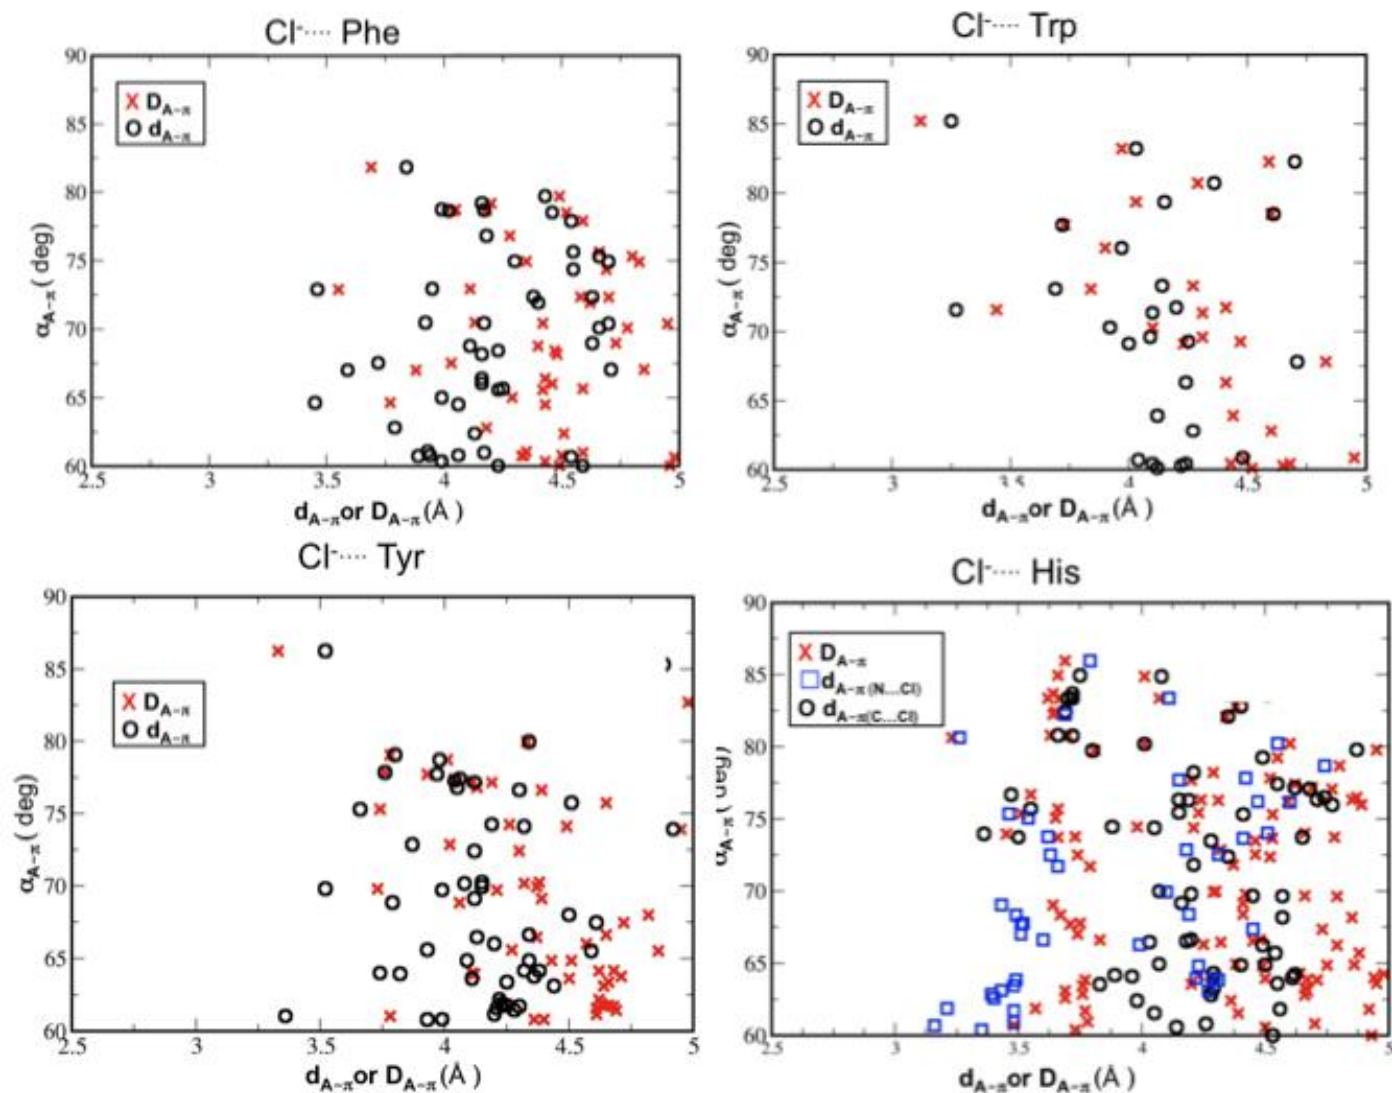

Figure S2. Scatter plot of the $d_{A-\pi}$ (and $D_{A-\pi}$) versus $\alpha_{A-\pi}$ for the chloride- π contacts that fulfill the search criteria. As a reference the sums of the van der Waals radii are $r_{N-Cl}=3.30$ Å, $r_{C-Cl}=3.45$ Å.

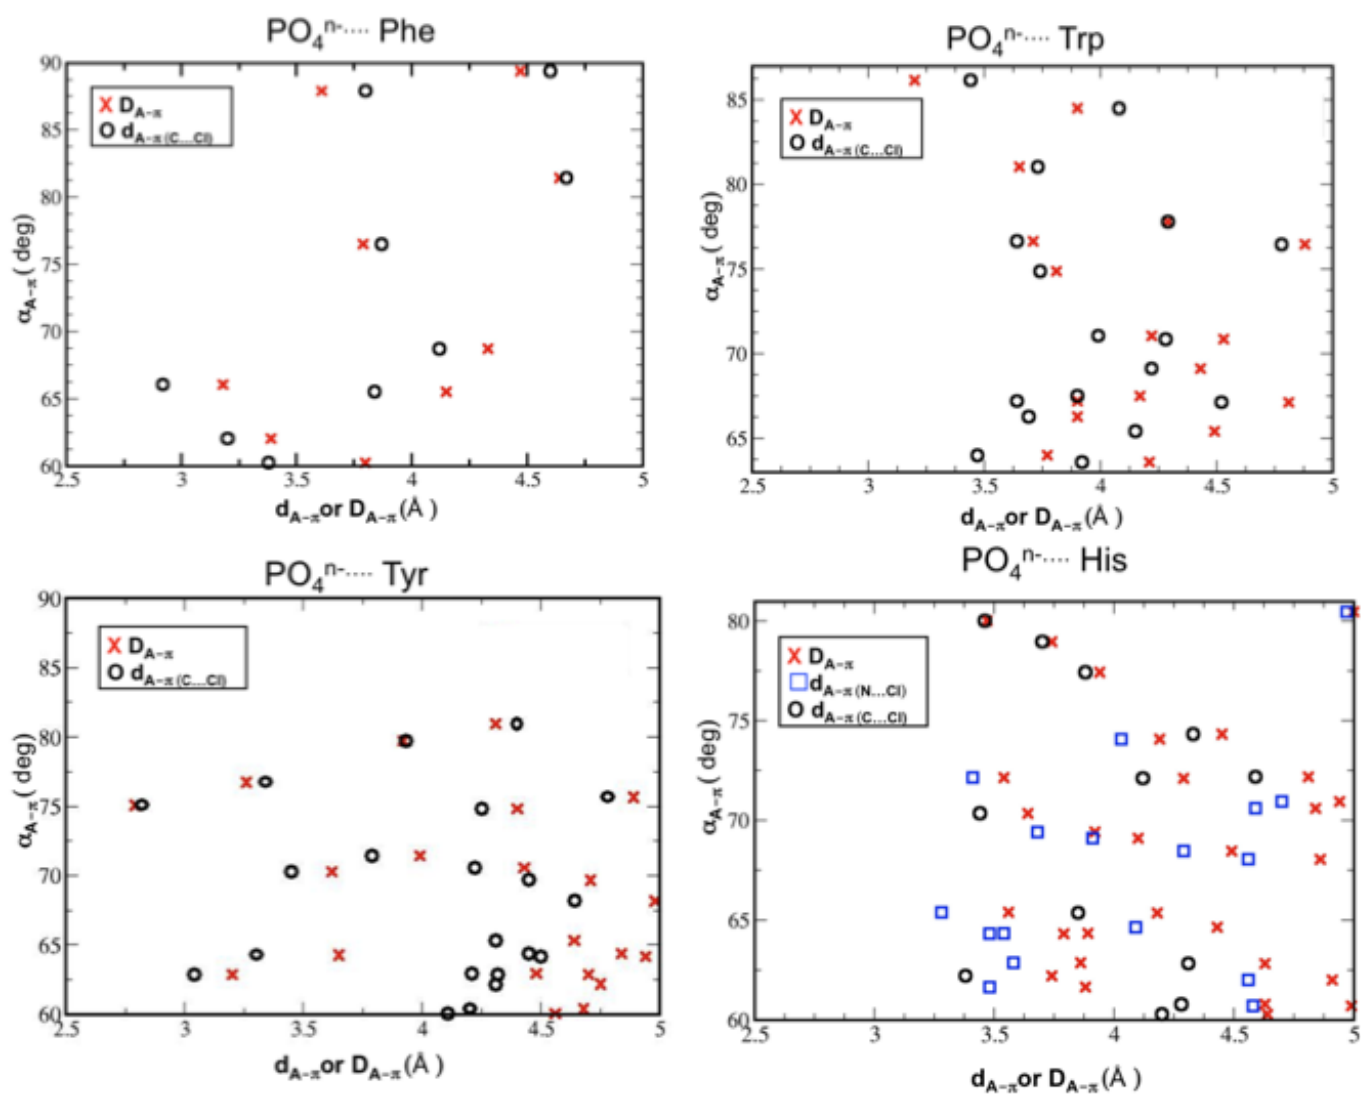

Figure S3. Scatter plot of the $d_{A-\pi}$ (and $D_{A-\pi}$) versus $\alpha_{A-\pi}$ for the phosphate- π contacts that fulfill the search criteria. As a reference the sums of the van der Waals radii are $r_{N-O}=3.07 \text{ \AA}$, $r_{C-O}=3.22 \text{ \AA}$.

Figure S4. Number of anion- π contacts as a function of the threshold. Around the van der Waals radius sum a total of 22 “strong interactions” are found for chloride (A) and a total of 6 strong interactions are found for phosphate (B).
