

## Supporting information for

# EDTA-mediated shape-selective synthesis of $\text{Bi}_2\text{WO}_6$ hierarchical self-assemblies with high visible-light-driven photocatalytic activities

**Supporting Information, Fig. S1.** XRD patterns of the products collected at different reaction time intervals in the presence of 0.2 g EDTA at pH=3. (a) before hydrothermal treatment, and after hydrothermal treatment for (b) 1 h, (c) 3 h, and (d) 6 h.

**Supporting Information, Fig. S2.** XRD patterns of the products collected at different time intervals with the aid of 0.40 g EDTA. (a) 1 h, (b) 4 h, (c) 9 h, and (d) 12 h.
