Figure S1. TEM image of the products synthesized at 150 °C, the other conditions are unchanged.

Figure S2. XRD pattern of the sample synthesized in 40 ml of water without benzene as interface, other conditions were the same as the typical synthesis.

Figure S3. XRD pattern of the as-synthesized hematite precursors obtained at different reaction times: (a) 6 h, (b) 15 h, and (c) 36 h.

Figure S4. Fourier transform infrared (FTIR) spectra of the hematite precursors synthesized for 6h (a) and pure PVP (b).
