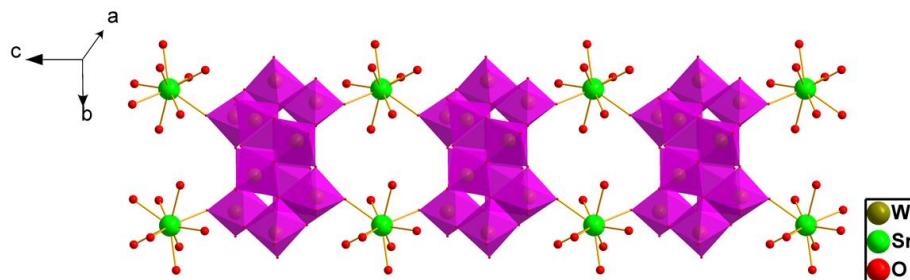

Figure S9. (a) Polyhedral and ball-and-stick representation of the infinite 1D chain structure of [H₂W₁₂O₄₂]¹⁰⁻ polyanions coordinated with Sr1 atom in compound **3**, Lattice water molecules are omitted for clarity, Colour codes: {WO₆} octahedra (pink), Sr (green), O (red).

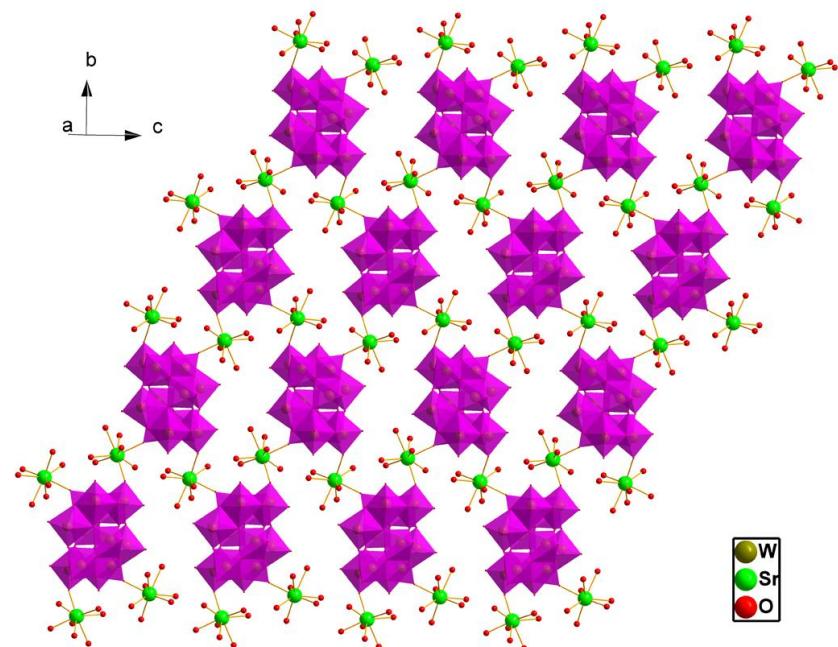

Figure S10. Polyhedral and ball-and-stick representation of the 2D network structure of $[H_2W_{12}O_{42}]^{10-}$ polyanions coordinated with Sr² atom in compound **3**. Lattice water molecules are omitted for clarity, Colour codes: $\{WO_6\}$ octahedra (pink), Sr (green), O (red).

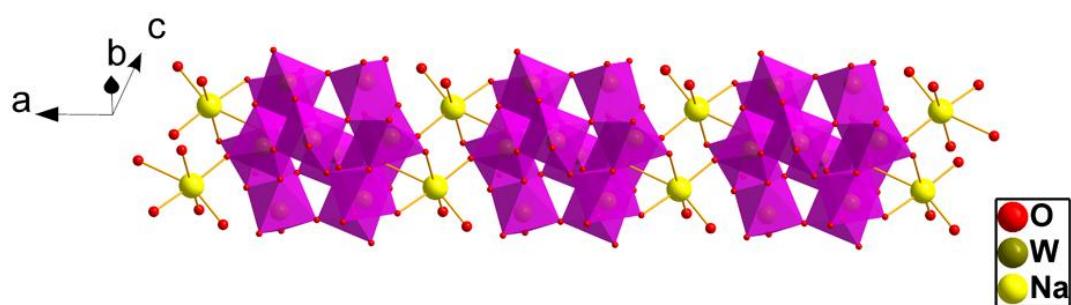

Figure S11. (a)Polyhedral and ball-and-stick representation of the infinite 1D chain structure of $[H_2W_{12}O_{42}]^{10-}$ polyanions coordinated with Na atom in compound **3**, Lattice water molecules are omitted for clarity, Colour codes: $\{WO_6\}$ octahedra (pink), Na (yellow), O (red).

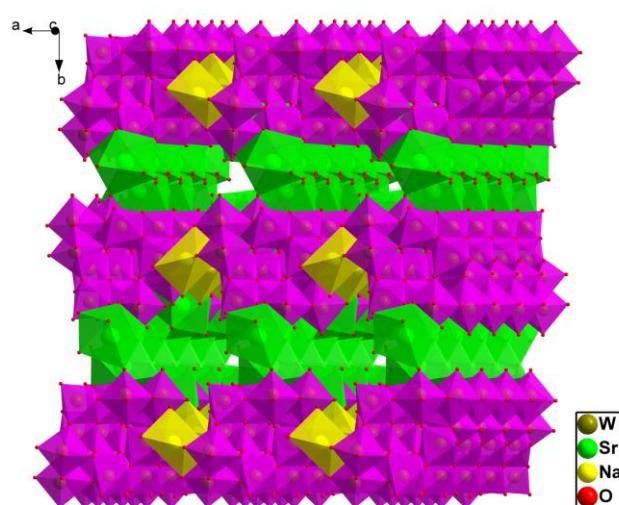

Figure S12. 3D packing arrangement of **3**. The polyanions, Sr atoms and Na atoms are represented with polyhedron; The solvent water molecules are omitted for clarity.

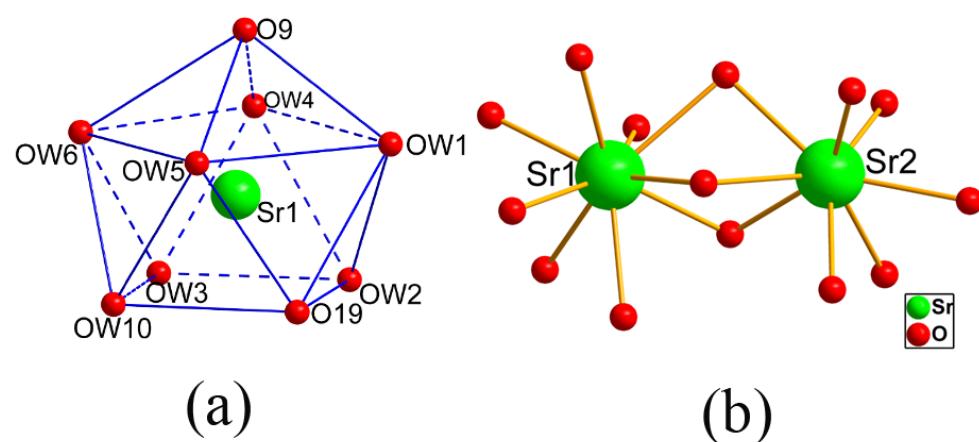

Figure S13. (a) The coordination polyhedrons around Sr1 atom in **3** (b) the adjacent Sr1 and Sr2 atoms in **3** were connected through three μ_2 -O atoms.

FT-IR Spectroscopy

The IR spectrum of **1** (Figure S14) showed the characteristic peaks of the different W–O bonds of $[\text{H}_2\text{W}_{12}\text{O}_{42}]^{10-}$ at 600–1000 cm^{-1} . The bands at ca. 940, 870, 826 and 694 cm^{-1} should be assigned to $\nu(\text{W–O}t)$, $\nu(\text{W–O}t')$, $\nu(\text{W–O}c)$ and $\nu(\text{W–O}b)$, respectively.¹ A broad band at 3422 cm^{-1} is due to the

aqua ligands. The peak at 1627 cm^{-1} associates with the crystalline lattice water molecules. The IR spectra of complexes **2–4** (as shown in Figure S11) are similar to that of compound **1**.

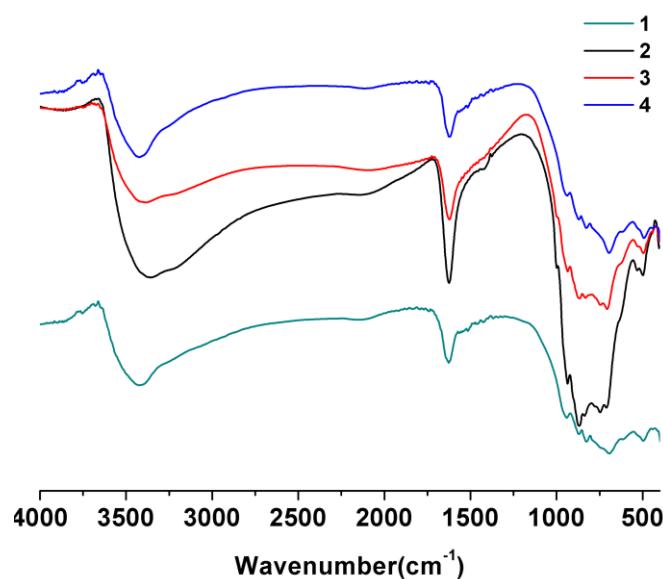

Figure S14. IR spectra of compounds **1**, **2**, **3** and **4**.

Optical Band Gap

To explore conductivity potentials of compounds **1–4**, the measurement of diffuse reflectivity for a powder sample was used to obtain band gap (E_g) (Figure S15), which was determined as the intersection point between the energy axis and the line extrapolated from the linear portion of the adsorption edge in a plot of Kubelka-Munk function F against energy E .¹⁻³ Kubelka—Munk function, $F = (1-R)^2/2R$, was converted from the recorded diffuse reflectance data, where R is the reflectance of an infinitely thick layer at a given wavelength. For compounds **1–4**, the band gap can be assessed at 3.36, 3.56, 3.55, 3.39 eV, respectively. The reflectance spectra reveal the nature of

semiconductivities with a large energy gap for compounds **1–4**.

Thermogravimetric analysis

In order to analyse the thermal stability of the compounds **1-4**, The thermal gravimetric analysis(TGA) were carried out for below 600°C. The TGA curves of **1-4** (Figure S17-S20) show weight loss of 14.33%, 13.11%, 14.78% and 13.75% in the range of 29-422°C, 20-427°C, 42-428°C and 38-424°C, respectively, which are assigned to all the lattice water molecules. They are in good agreement with the calculated value of 14.86%, 12.66%, 14.15% and 13.26% for the compounds **1-4**, respectively. The results of the TGA of the compounds **1-4** agree with those of structural determination.
