Electronic Supplementary Material (ESI) for CrystEngComm

Supporting Information

Activation of Metal–Organic Framework Materials

Joseph E. Mondloch, Olga Karagiaridi, Omar K. Farha* and Joseph T. Hupp*

Department of Chemistry, Northwestern University, 2145 Sheridan Road, Evanston, IL, USA

* o-farha@northwestern.edu; j-hupp@northwestern.edu

Table S1. To the best of our knowledge these publications have utilized or attempted to utilize supercritical CO_2 ($scCO_2$) to activate their MOF materials. The entries are entered in chronological order based on date submitted. Data are reported as they appear in the original manuscript only. References are self-contained within this Supporting Information document and hence are numbered differently than in the main text.

Entry	*MOF*	*Institute*	*$scCO_2$ BET SA ($m^2\ g^{-1\ NR}$)*	*Other BET SA ($m^2\ g^{-1\ NR}$)*	*$scCO_2$ Pore Volume ($cm^3\ g^{-1\ NR}$)*	*Reference (Year)*

C = Conventional activation
FD = Activation by freeze-drying
FSC = Activation by flowing $scCO_2$
HT = High temperature evacuation
RT = Room temperature evacuation
SC = Activation by $scCO_2$
SE = Solvent Exchange
NR = Represents that the value was not reported (in some instances isotherms could be measured/obtained, in other instances there was simply no porosity or loss of crystallinity). In most instances where one values is reported over another (e.g., $scCO_2$ *vs*. conventional activation) the reported value was higher or identical to the value not reported.
