Tabulated effective product yields for the major products

- The re-dissociation fractions listed below are the yields prior to factoring out re-dissociation.
- N/A denotes calculations using a mechanism that did not include the product/intermediate. This is mainly in low-temperature reaction conditions where the energy ceiling used was below the ground state energy of some of the energetically higher-lying isomers and transition states. In the high-temperature regime, it is usually an indication that thermal isomerisation is sufficiently fast to compete on the timescales we are interested in, and are hence included in the kinetic analysis.
