

Reactions of chemically activated C₉H₉ species II:
The reaction of phenyl radicals with allene and cyclopropopene,
and of benzyl with acetylene

More information is available (population-averaged unimolecular rate coefficients, relative concentrations of intermediates,...), which is not included here due to the volume of the data. Contact the authors directly for obtaining additional supporting information.

Modified Arrhenius expressions

Modified Arrhenius expressions for the total and partial rate coefficients of the initial reaction of benzyl + acetylene, as obtained in the TST calculations. As redissociation is a very important channel at temperatures above 1000K, it needs to be taken into account to get the effective rate coefficient of this reactions. See main text for a modified Arrhenius expression for T=1000-4000K including redissociation corrections.

10-300 K : $k_{\text{rad20}}(T) = 1.036 \times 10^{-11} \cdot T^{-0.590} \cdot \exp(-55.183 \text{ kJ mol}^{-1} / kT)$
reproduces TST calculations within factor of 1.4

200-2000 K : $k_{\text{rad20}}(T) = 3.391 \times 10^{-18} \cdot T^{1.842} \cdot \exp(-51.819 \text{ kJ mol}^{-1} / kT)$
reproduces TST calculations within factor of 1.04

1000-4000 K : $k_{\text{rad20}}(T) = 8.067 \times 10^{-19} \cdot T^{2.022} \cdot \exp(-50.289 \text{ kJ mol}^{-1} / kT)$
reproduces TST calculations within factor of 1.0002

Temperature and pressure-dependent product yields (all products)

- Pressure range spans 1E-9 to 1E8 Pa, in steps of 1 order of magnitude.
- Temperature starts at 20K, increases in steps of 10K to 300K, then in steps of 100K to 1500K, and finally in steps of 250K up to 4000K.
- Rate constants are in units of $\text{cm}^3 \text{ molecule}^{-1} \text{ s}^{-1}$, product yields (PY) in fractions.
- The "effective" rate constants and product yields are corrected for redissociation to the original reactants, the columns denoted "true" are the original values prior to correction.
- Products are listed in order of importance. The columns marked "Cumul" give the cumulative sum of all product yields, to facilitate the selection of major versus minor products.
