^b Steacie Institute for Molecular Sciences, National Research Council, 100 Sussex Drive, Ottawa, Ontario K1A 0R6, Canada. E-mail: david.rayner@nrc-cnrc.gc.ca

Details of the structures, energetics and vibrational frequencies of Au_nNO^+ and Au_nCO^+ complexes from DFT calculations.

Figure S1: Optimized structures of bare gold cluster cations Au_n^+ ($n=2-8$) and of their complexes with CO or NO.

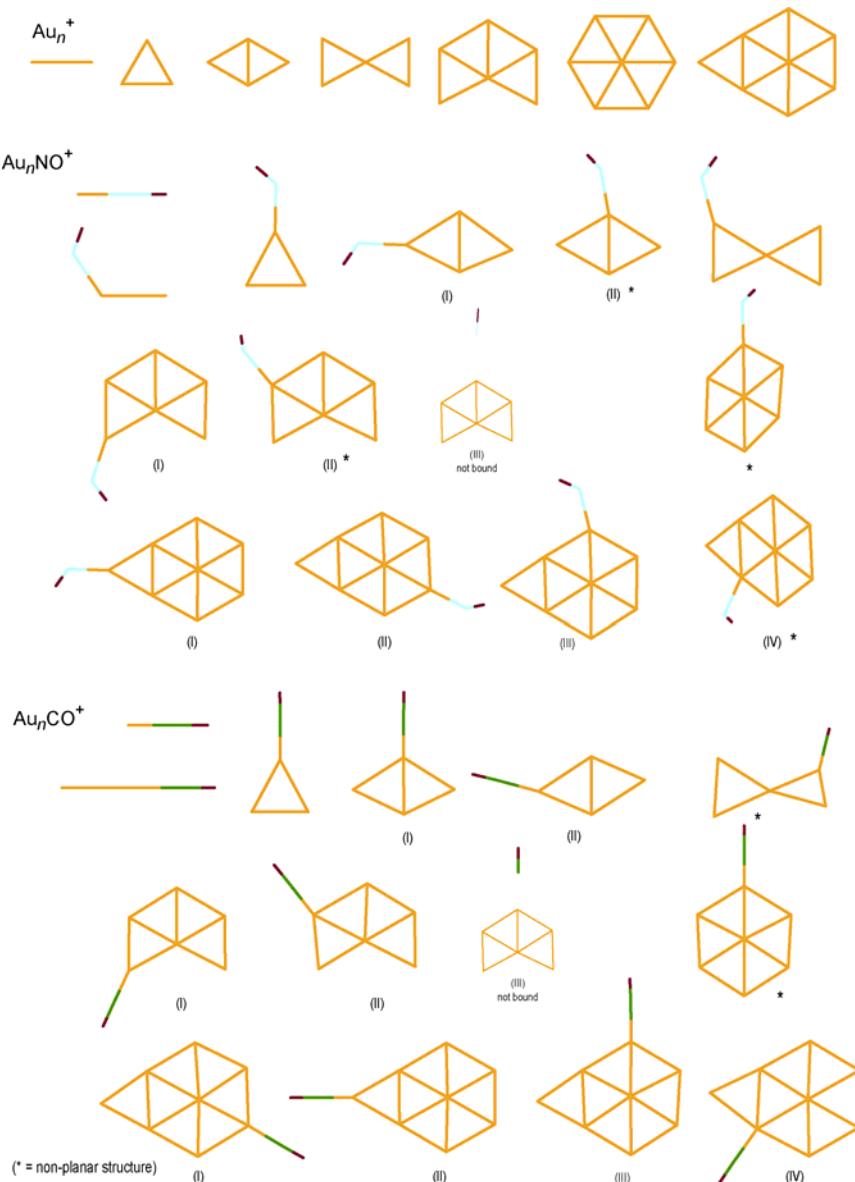

Table S1: Calculated binding energies of NO and CO to gold cluster cations and calculated and experimental frequencies of the internal stretch vibrations of the ligands.

	$E(\text{SCF}) + \text{ZPVE} (\text{h})$	ΔE (eV) $E(\text{Au}_n\text{NO}) - E(\text{NO}) - E(\text{Au}_n)$	ΔG^{298} (kJ/mol)	$\nu(\text{NO})$ (cm $^{-1}$)	$\nu(\text{NO}),$ scaled (cm $^{-1}$)	$\nu(\text{NO})$ exp. (cm $^{-1}$)
