Macromolecular dynamics of conjugated polymer in donor-acceptor blends with charge transfer complex

*Olga D. Parashchuk[1,2], Tatyana V. Laptinskaya[1], Dmitry Yu. Paraschuk[*1,2]*

Figure 1S. The ACFs (a) and the corresponding RTDs (b) for MEH-PPV:TNF=1:0.5 dilute blend and pristine MEH-PPV solutions for various concentration. The scattering vector for all ACFs was $q = 0.01$ nm^{-1} (θ=40º).
