Supplemental data
for
Reconstructing protein remodeled membranes in molecular
detail from mesoscopic models

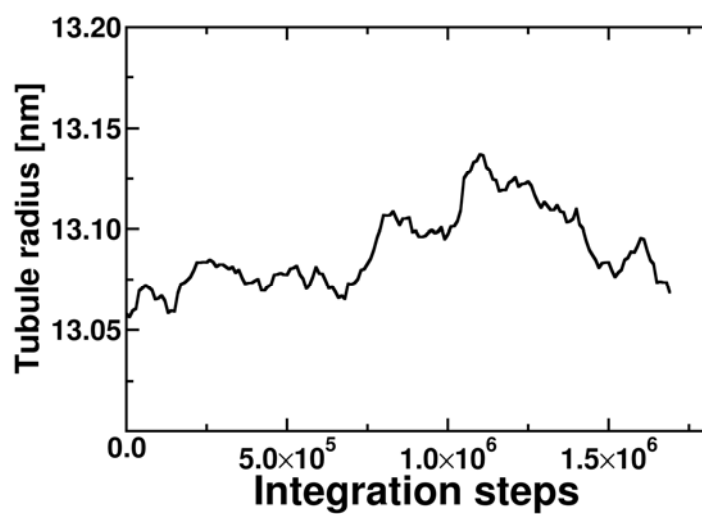

Edward Lyman, Haosheng Cui, and Gregory A. Voth[†]

Supplemental Figure 1. Left Panel: Surface of a membrane tubule, as defined by a set of EM2 particle positions, indicated by blue spheres. A triangular patch of surface defined by three neighboring EM2 particles is shown in red. Middle Panel: The triangle defined by the EM2 particles is used to select a triangular piece of a pre-equilibrated membrane bilayer. The position of each Gay-Berne lipid is indicated by a brown point. Right Panel: The triangular patch of pre-equilibrated membrane.

Supplemental Figure 2. Radius of the membrane tubule after initial heating minimization, measured from the midplane of the bilayer.

Supplemental Figure 3. Initial (left panel) and configuration after 2 million integration steps (Right panel) of a protein free membrane tubule.
