

Al_4^{2-} ; From Aromaticity to Molecular Machines

Cina Foroutan-Nejad

School of Chemistry, College of Science, University of Tehran, Tehran, Iran

Cina-foroutan@khayam.ut.ac.ir

Table S-1: The out-of-plane intra- and interatomic dipole moments of Al_4^{2-} salts with alkaline metals and alkaline earth metals, page S-3.

Figure S-1: The plot of π -isotropic intra-atomic magnetizability versus bond length variation among Al_4^{2-} salts with alkaline metals and alkaline earth metals, page S-4.

Figure S-2: The plot of Total and σ -isotropic intra-atomic magnetizabilities versus bond length variation among Al_4^{2-} salts with alkaline metals and alkaline earth metals, page S-4.

Figure S-3: The plot of bond length magnetizability versus 1,2 delocalization indices among Al_4^{2-} salts with alkaline metals and alkaline earth metals, page S-5.

Figure S-4: The plot of π -bond magnetizability versus π -charge of the Al_4 framework among Al_4^{2-} salts with alkaline metals and alkaline earth metals, page S-5.

Figure S-5: The plot of σ -bond magnetizability versus π -charge of the Al_4 framework among Al_4^{2-} salts with alkaline metals and alkaline earth metals, page S-6.

Figure S-6: The plot of binding energy versus the distance between the geometric center of the Al_4 framework and the nearest hydrogen nucleus in benzene for T-shaped complexes between Al_4^{2-} salts with alkaline metals and alkaline earth metals and the benzene, page S-6.

Figure S-7: The plot of binding energy versus the distance between the geometric centers of the Al_4 framework and the benzene for PPS complexes between Al_4^{2-} salts with alkaline metals and alkaline earth metals and the benzene, page S-7.

Figure S-8: The plot of binding energy versus the charge of the benzene for T-shaped complexes between Al_4^{2-} salts with alkaline metals and alkaline earth metals and the benzene, page S-7.

Figure S-9: The plot of binding energy versus the charge of the benzene for PPS complexes between Al_4^{2-} salts with alkaline metals and alkaline earth metals and the benzene, page S-8.

The Z-matrixes of all studied molecules, page S-9.

The electronic delocalization indices between various atomic basins in Al_4 complexes; $2*D2(A,B) = 2*D2(B,A) =$ Average Number of Electron Pairs Shared Between Atoms A and B; $DI(A,B) = DI(B,A) =$ Electron Delocalization Index. Average Number of Electrons Delocalized (Shared) Between Atoms A and B. Bond Index When Atoms A and B Connected by a Bond Path;

$\%Deloc(A,B) = 100 * (DI(A,B)/2)/N(A) =$ Percentage of Average Number of Electrons in Atom A That are Shared With Atom B;

$\%Deloc(B,A) = 100 * (DI(A,B)/2)/N(B) =$ Percentage of Average Number of Electrons in Atom B That are Shared With Atom A page S-15.
