Fig. S1 and Table S1 show the reproducibility of D205 dye-sensitized solar cells with PEDOT as hole conductor. The PEDOT was prepared by the photoelectrochemical polymerization method under 670 nm illumination in porous TiO₂ electrodes.

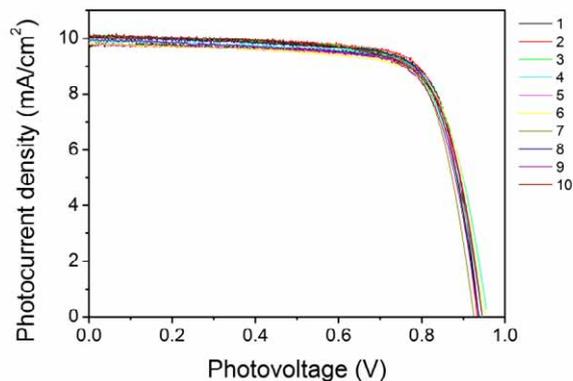

Fig. S1 the I-V curves of ten PEDOT DSSCs fabricated under the optimized 670 nm illumination. The I-V measurements were performed under 100mW/cm² AM1.5 illumination.

Table S1. The photoelectrical performance of ten PEDOT DSSCs fabricated under the optimized 670 nm illumination. J_{SC} is short circuit photocurrent density, V_{OC} is open circuit photovoltage, FF is fillfactor, PCE is solar-to-electric conversion efficiency.

	J_{SC} (mA/cm ²)	V_{OC} (mV)	FF	PCE (%)
1	9.8	937	0.77	7.11
2	10.1	929	0.76	7.15
3	10.1	944	0.74	7.01
4	9.9	955	0.74	7.03
5	9.8	945	0.75	6.96
6	9.8	952	0.74	6.91
7	10.1	925	0.75	6.98
8	10.0	938	0.75	7.07
9	10.0	936	0.73	6.87
10	10.1	944	0.73	6.92
