1. Raw data of the dynamic rheological measurements for the GP-1 fibrous gels engineered by using different approaches of kinetic controls. (a) different thermal treatments; (b) different solvents; (c) effect of additives.

2. Fractal analyses by using the Dickinson model. The linear fit of $\ln \frac{G'(t) - G'(0)}{G'(\infty) - G(0)}$ against

 $\ln(t-t_g)$ for the first zone of the kinetic curves from the gels with (a) different thermal treatments; (b) different solvents; and (c) effect of additives.
