

SUPPLEMENTARY INFORMATION

Microscopy images of cell cultured PET films indicating cell adhesion to the different PET substrates: (a) non-irradiated, (b) irradiated at 193 nm, (c) irradiated at 266 nm, linearly polarized, normal incidence, (d) irradiated at 266 nm, linearly polarized, incidence at 45°, (e) irradiated at 266 nm, circularly polarized. (f) Number of cell nuclei as an average of three different microscopy images.
