

Supporting information

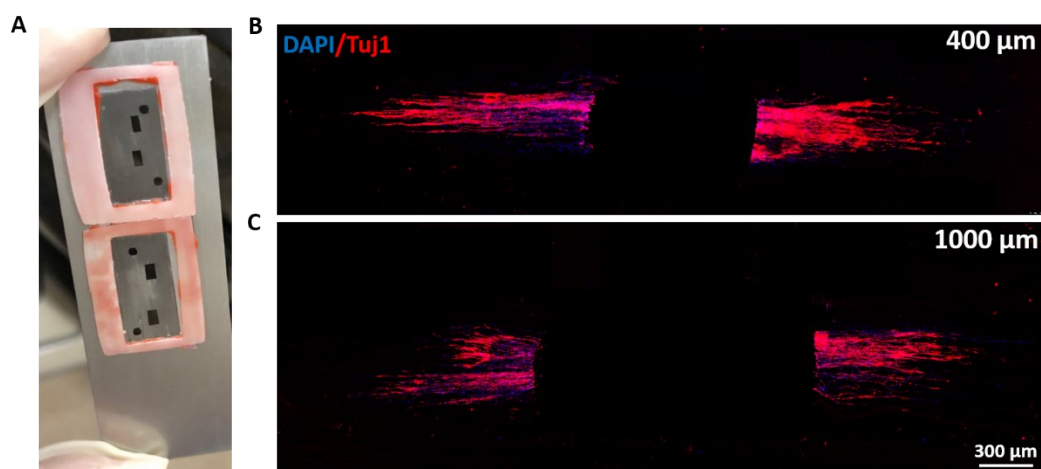

Figure S1. The leftover DRGs after axotomy. (A) The leftover DRGs on the scaffold after laser microdissection. (B) Representative fluorescent image of leftover DRGs axotomized at 400 μm away from the DRG soma. (C) Representative fluorescent image of leftover DRGs axotomized at 1000 μm away from the DRG soma.

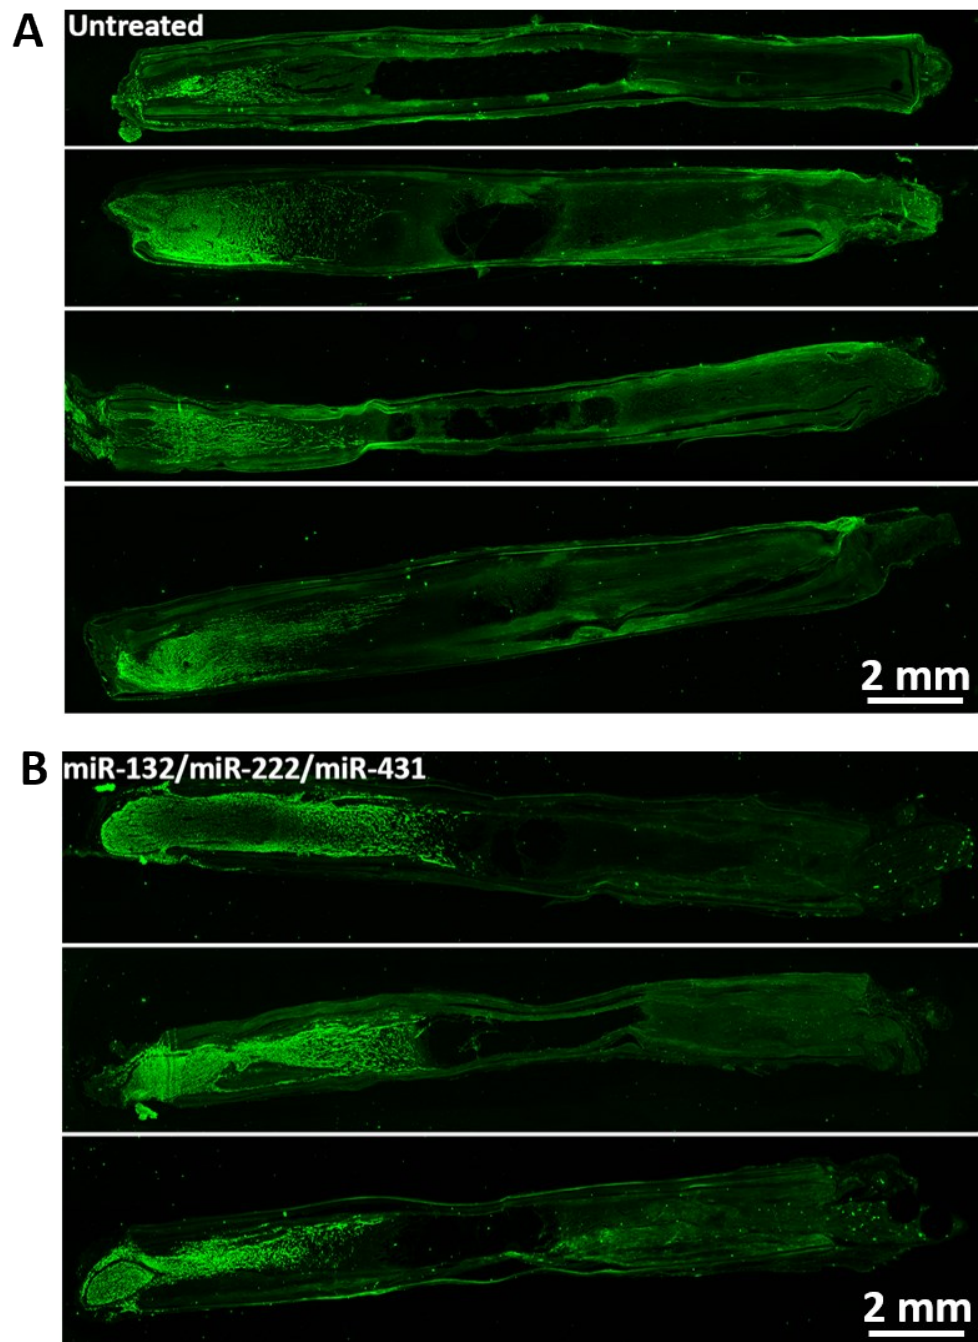

Figure S2. NF200 staining in both untreated and miR-132/miR-222/miR-431-treated samples. (A) All the untreated samples which were stained with NF200. (B) All the miR-132/miR-222/miR-431-treated samples that were stained with NF200.
