**Table S4** | The adsorption energies of Mg atom on C site, hole site, and V site, respectively.

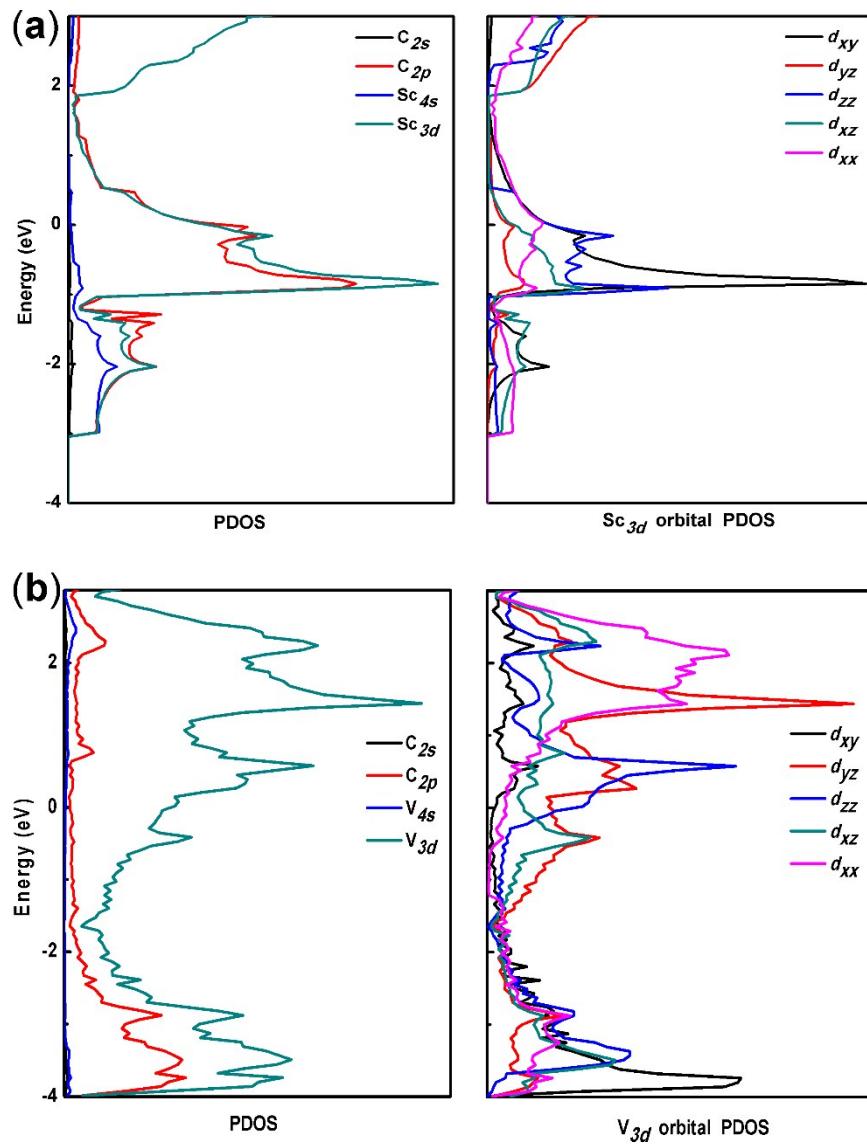

| Phase<br>Adsorption<br>position | Adsorption energy (eV) |           |        |
|---------------------------------|------------------------|-----------|--------|
|                                 | C site                 | Hole site | V site |
| <i>tetr</i> -CrC                | -1.45                  | -1.52     | -1.21  |
| <i>tetr</i> -HfC                | -0.77                  | -0.63     | -0.70  |
| <i>tetr</i> -NbC                | -0.52                  | -0.19     | -0.19  |
| <i>tetr</i> -ScC                | -1.76                  | -2.13     | -1.75  |
| <i>tetr</i> -TaC                | -1.41                  | -1.09     | -1.01  |
| <i>tetr</i> -TiC                | -0.67                  | -0.64     | -0.65  |
| <i>tetr</i> -VC                 | -1.12                  | -1.07     | -0.89  |
| <i>tetr</i> -ZrC                | -0.78                  | -0.62     | -0.67  |

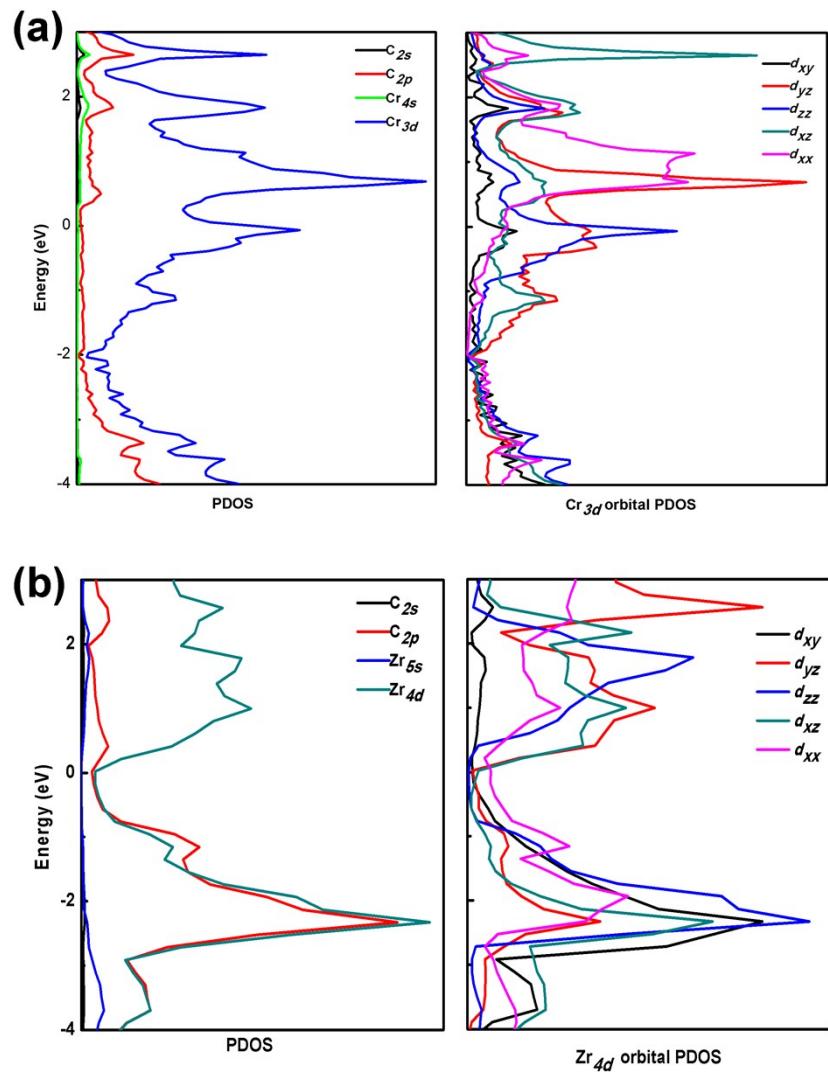

**Fig. S1** | Electronic band structure of (a-h) *tetr-ScC*, *tetr-TiC*, *tetr-VC*, *tetr-CrC*, *tetr-ZrC*, *tetr-NbC*, *tetr-TaC*, and *tetr-HfC* with PBE functional, respectively. The Fermi level is set as 0 eV.  $\Gamma$  (0, 0, 0), X (1/2, 0, 0), S (1/2, 1/2, 0) and Y (0, 1/2, 0) refer to special points in the first Brillouin zone of reciprocal space.

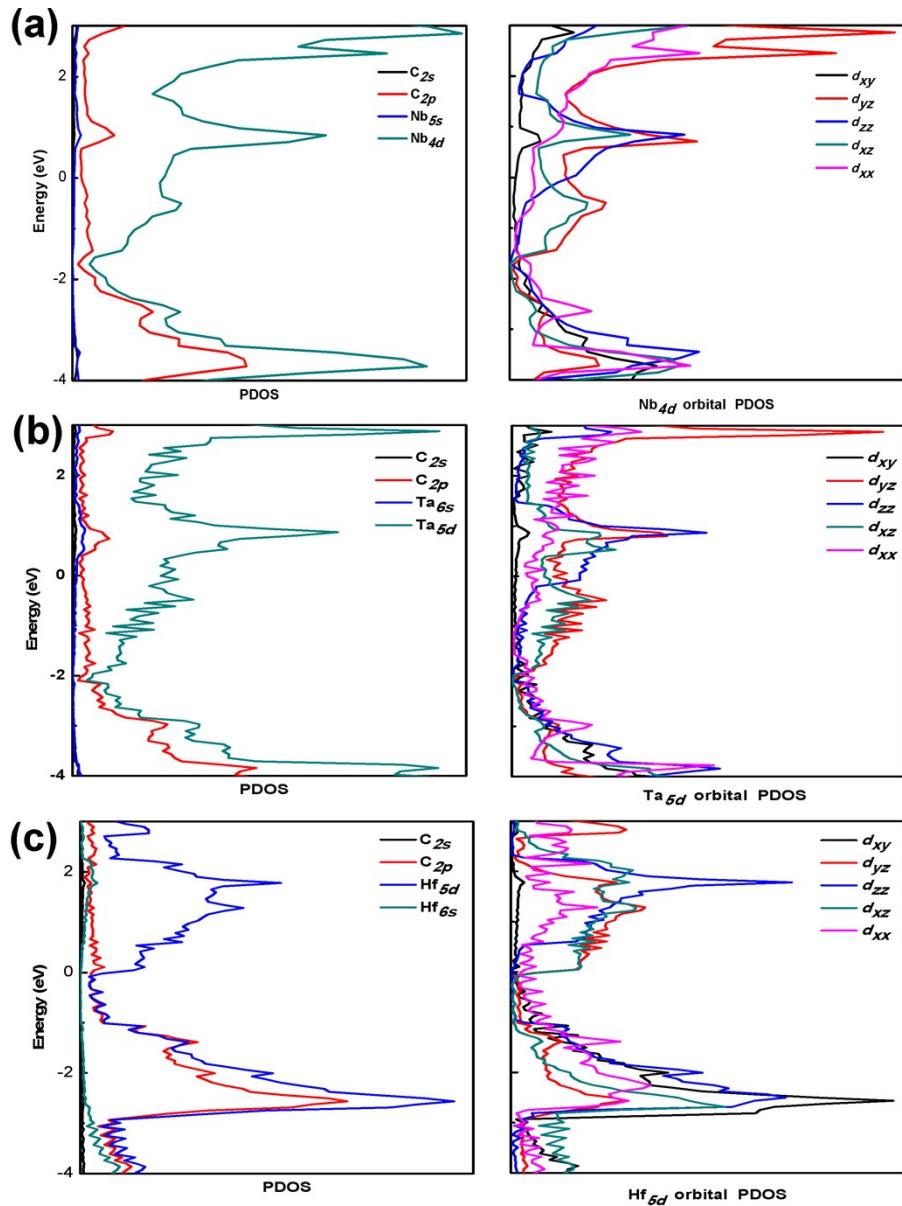

**Fig. S2** | Electronic band structure of (a-h) *tetr*-ScC, *tetr*-TiC, *tetr*-VC, *tetr*-CrC, *tetr*-ZrC, *tetr*-NbC, *tetr*-TaC, and *tetr*-HfC with Heyd-Scuseria-Ernzerhof (HSE06) functional, respectively. The Fermi level is set as 0 eV.  $\Gamma$  (0, 0, 0), X (1/2, 0, 0), S (1/2, 1/2, 0) and Y (0, 1/2, 0) refer to special points in the first Brillouin zone of reciprocal space.

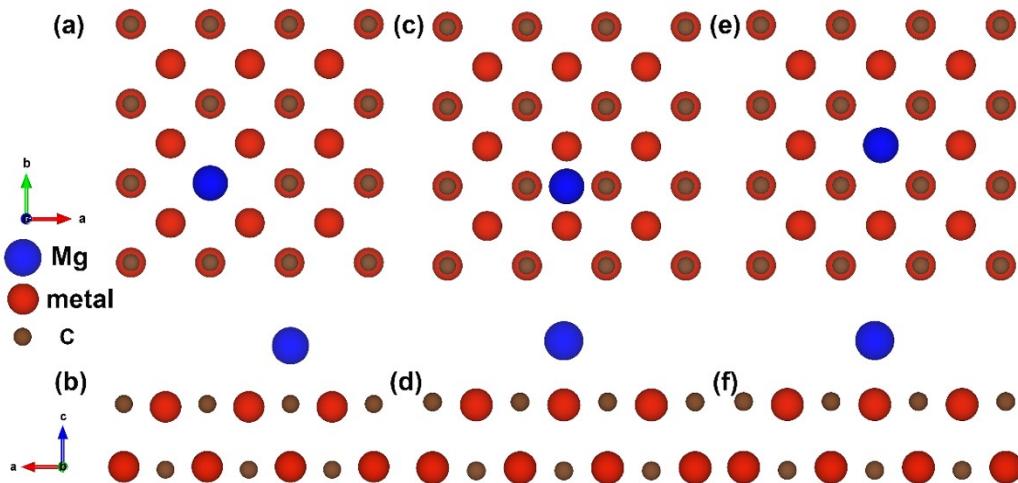

**Fig. S3** | Partial density of states (DOS) of (a) *tetr-ScC* and (b) *tetr-VC* at equilibrium state.

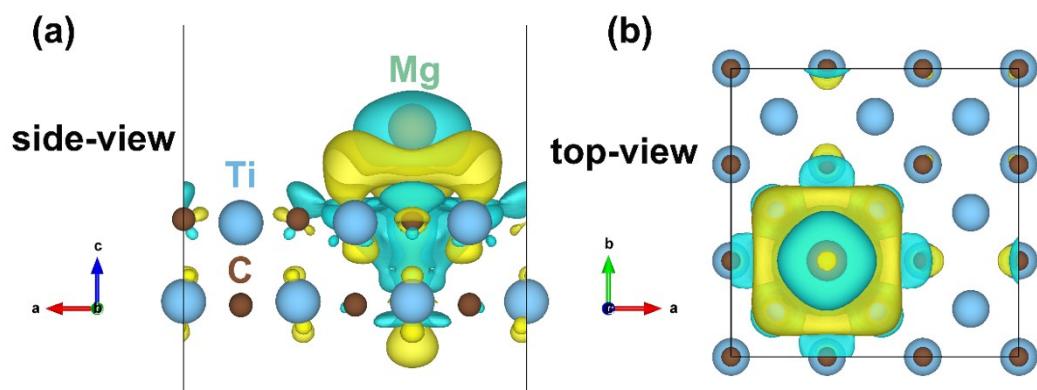

**Fig. S4** | Partial DOS of (a) *tetr*-CrC and (b) *tetr*-ZrC at equilibrium state.

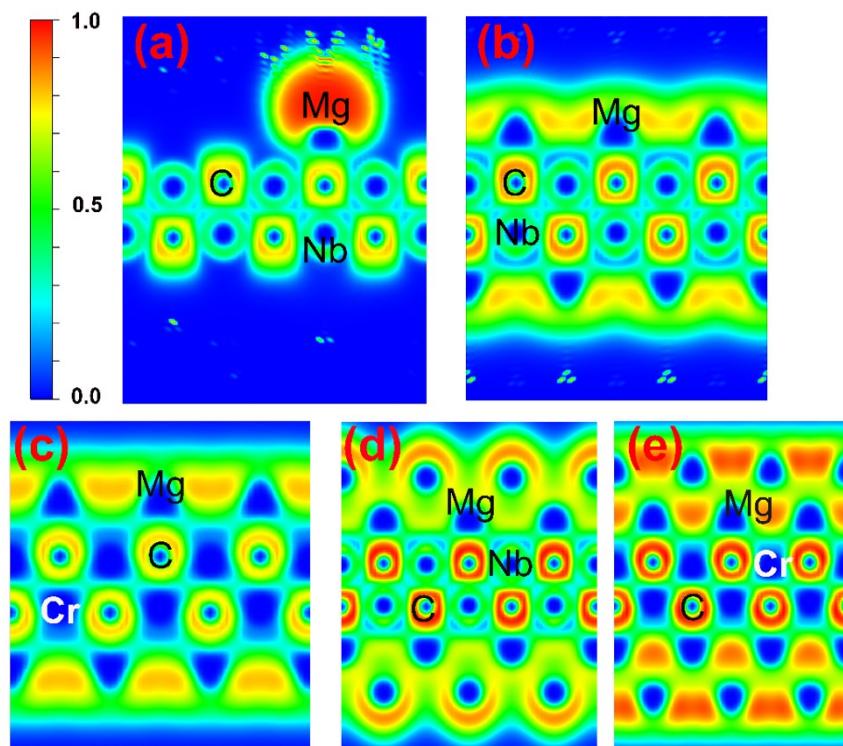

**Fig. S5** | Partial DOS of (a) *tetr*-NbC, (b) *tetr*-TaC and (c) *tetr*-HfC at equilibrium state.

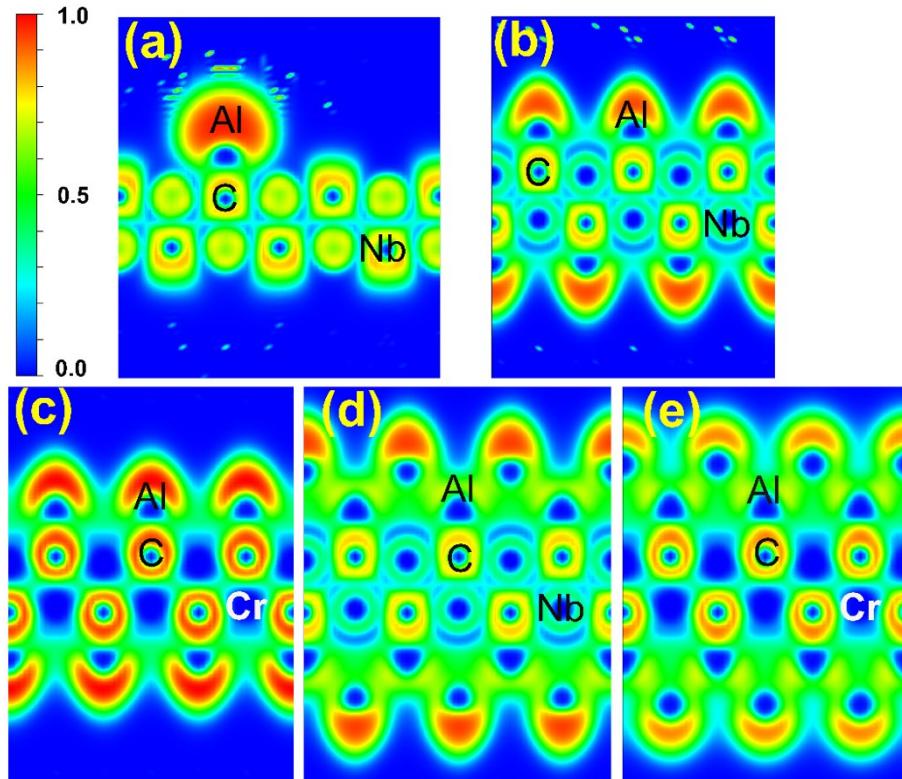

**Fig. S6** | The top views of Mg atom located directly on (a) C site, (c) hole site and (e) metal site on *tetr*-MCs, respectively. And the side views of Mg atom located directly on (b) C site, (d) hole site, (f) metal site on *tetr*-MCs, respectively. The blue, red and brown spheres represent Mg, metal, and C atoms, respectively.

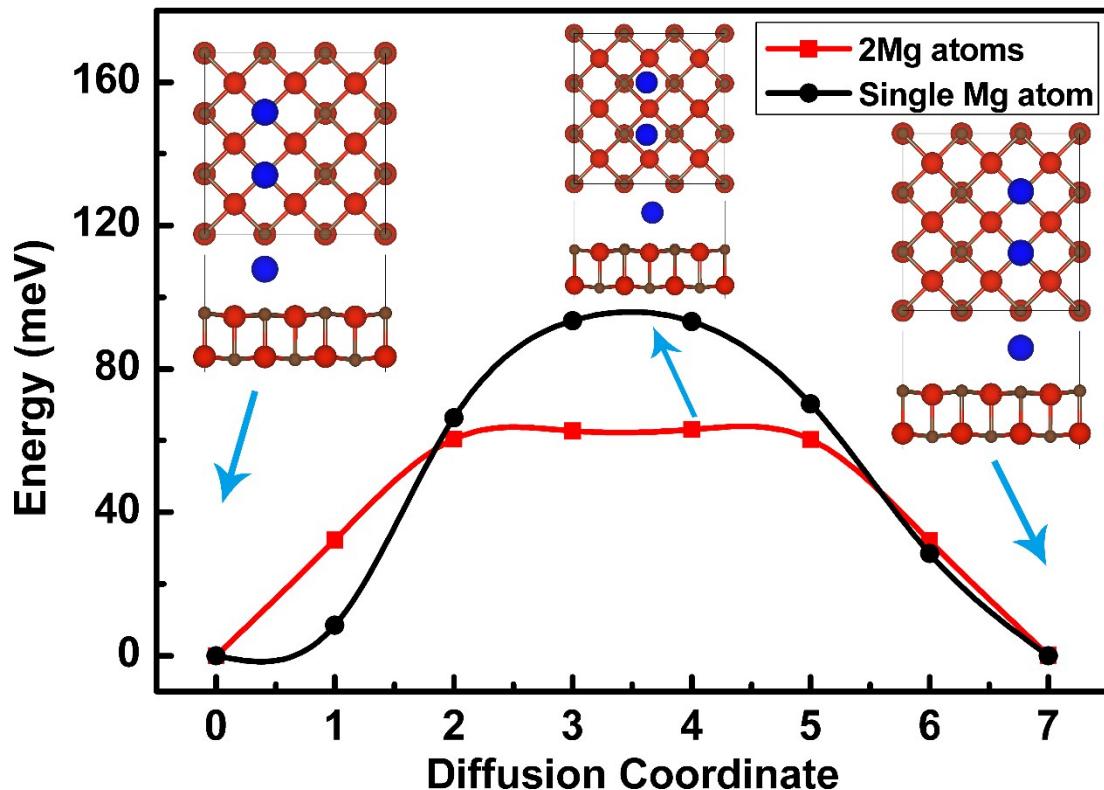

**Fig. S7** | The (a) side-view and (b) top-view of charge density differences for the Mg atom on *tetr*-TiC surface. The yellow and light blue regions represent the electron accumulation and depletion, respectively.

**Fig. S8** | The electron localization function (ELF) maps of (a) single Mg atom on *tetr*-NbC, (b) one layer of Mg atoms on *tetr*-NbC, (c) one layer of Mg atoms on *tetr*-CrC, (d) two layers of Mg atoms on *tetr*-NbC, and (e) two layers of Mg atoms on *tetr*-CrC. ELF ranges from 0.0 (blue) to 1.0 (red).

**Fig. S9** | The ELF maps of (a) single Al atom on *tetr*-NbC, (b) one layer of Al atoms on *tetr*-NbC, (c) one layer of Al atoms on *tetr*-CrC, (d) two layers of Al atoms on *tetr*-NbC, and (e) two layers of Al atoms on *tetr*-CrC. ELF ranges from 0.0 (blue) to 1.0 (red).

**Fig. S10** | The diffusion energy barrier of single Mg atom and two Mg atoms on *tetr-VC*. The internal illustrations correspond to the initial, transition state, and final structures, respectively. The blue balls, red balls, and brown balls represent Mg atoms, V atoms, and C atoms, respectively.
