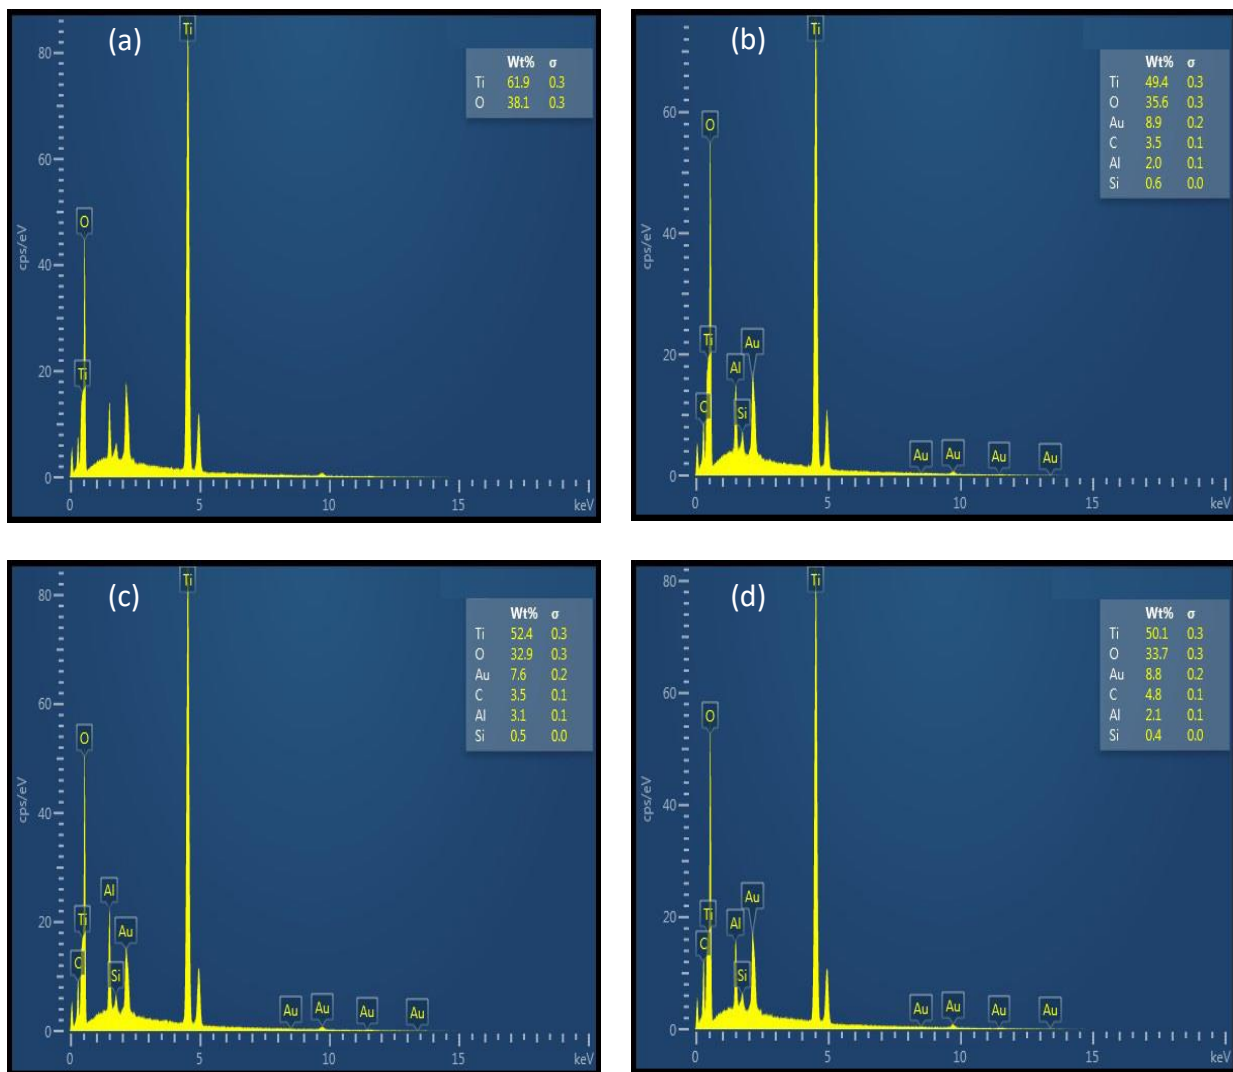

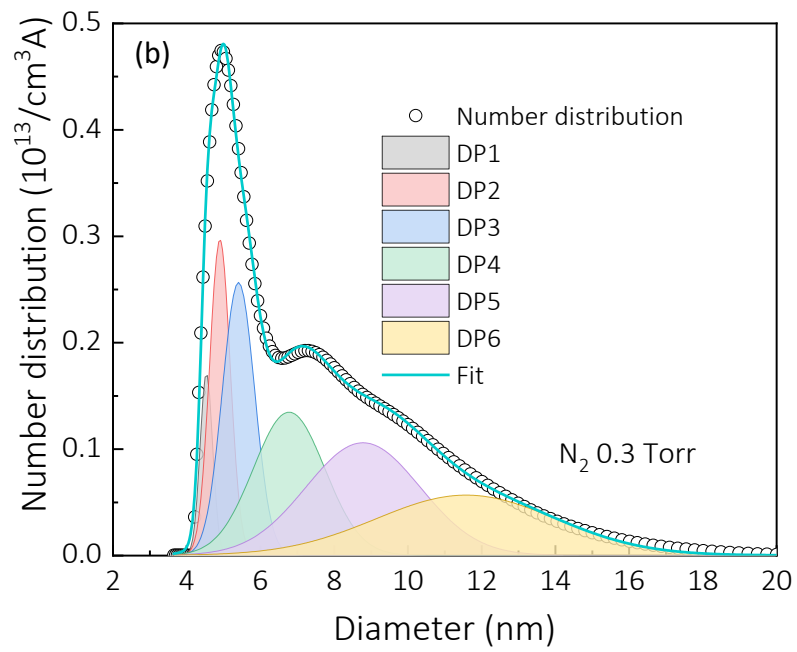

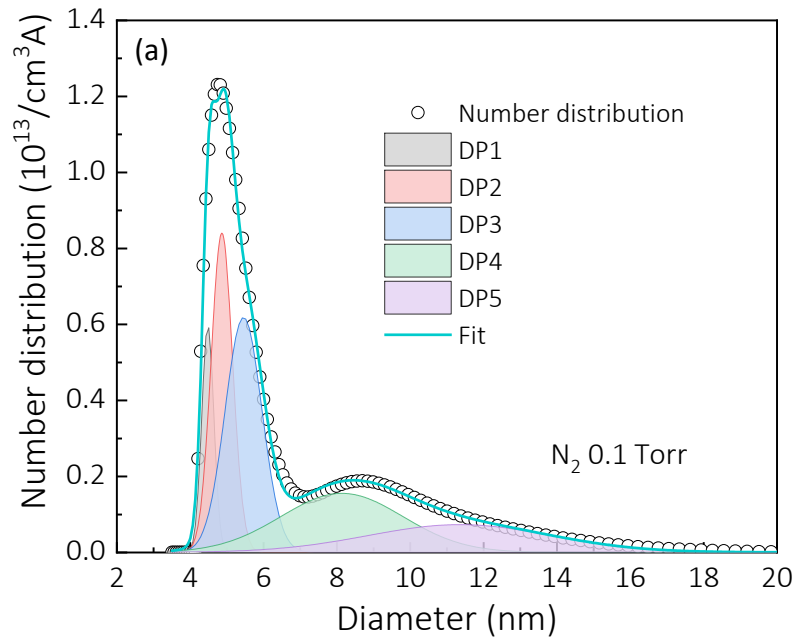

Fig. S2. EDX pattern of the pristine sample (a) and post-treated samples with Ar plasma (b) 0.1 Torr, (c) 0.3 Torr and (d) 0.6 Torr. Au contamination is due to the coating of the samples with Au to minimize charging effects on the SEM image. The presence of the other organic contaminations in the EDX spectrum is originated in the use of adhesives to keep samples on the holders.

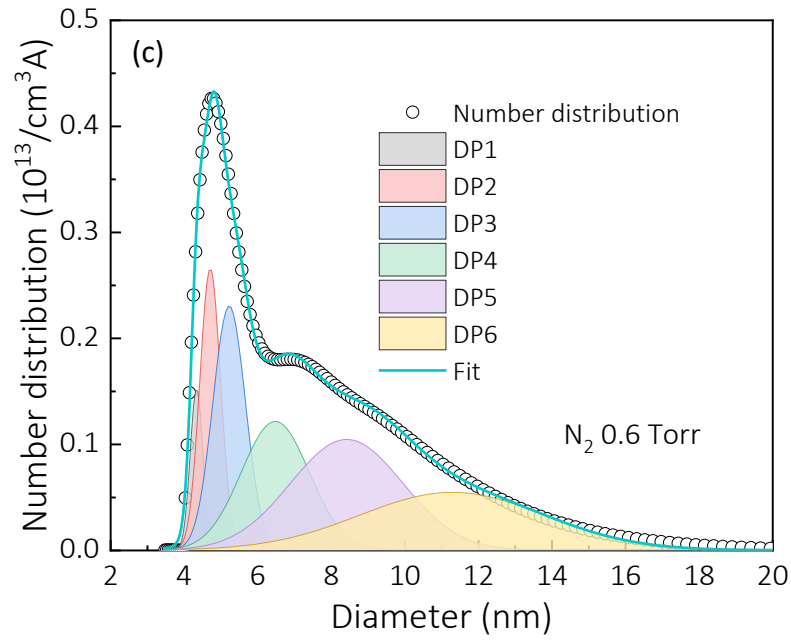

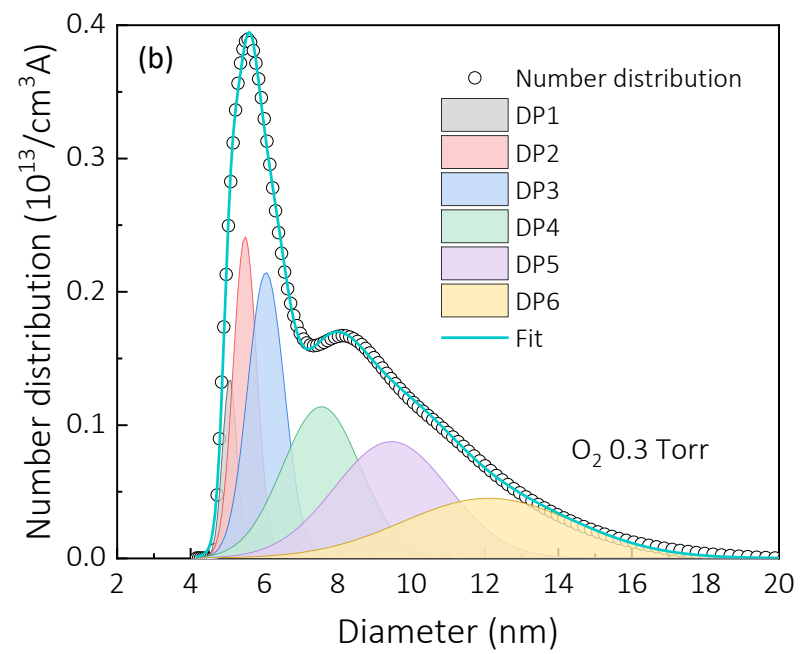

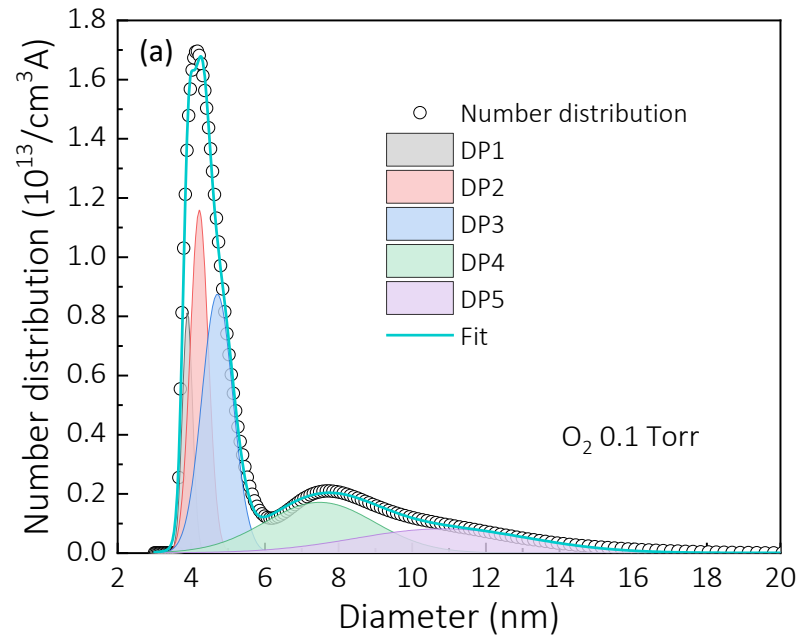

Fig. S3. The deconvolution of the number distribution of the treated sample by N_2 plasma. (a) 0.1 Torr, (b) 0.3 Torr, and (c) 0.6 Torr.

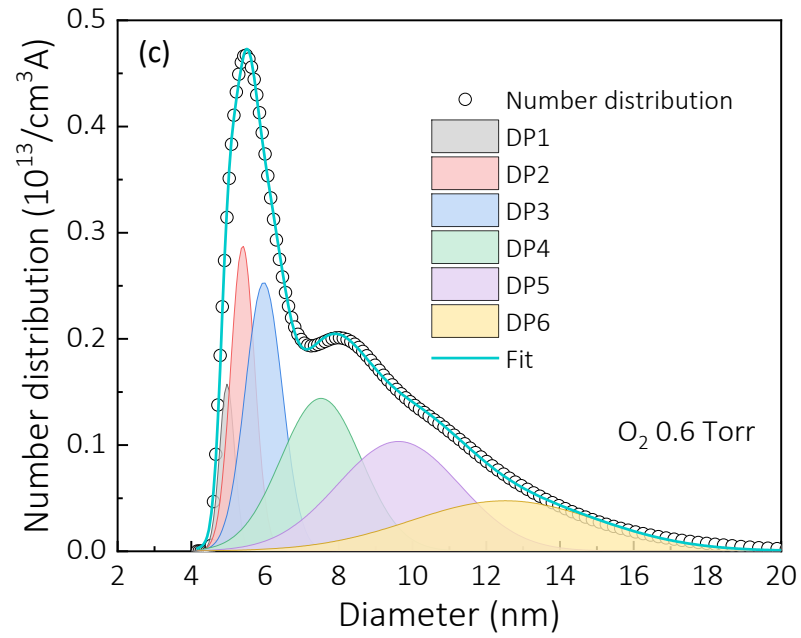

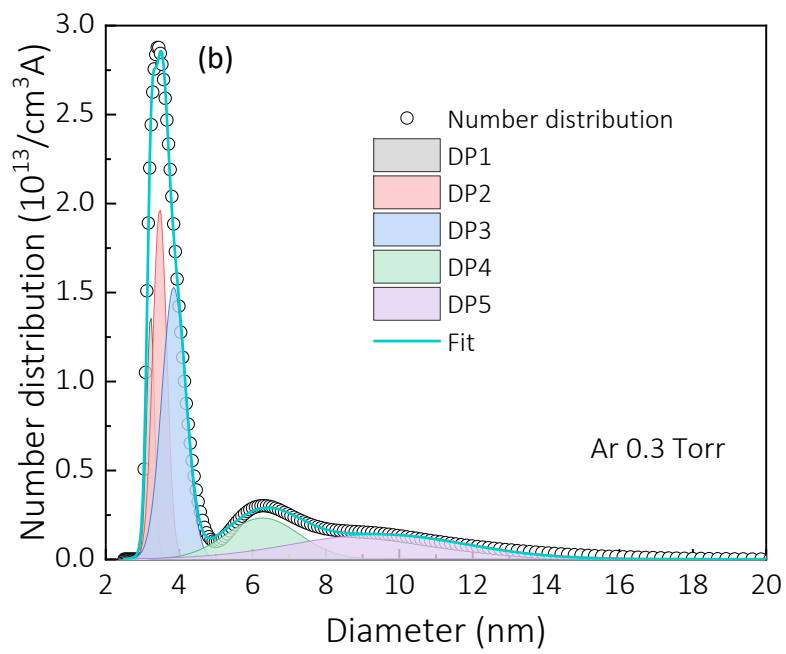

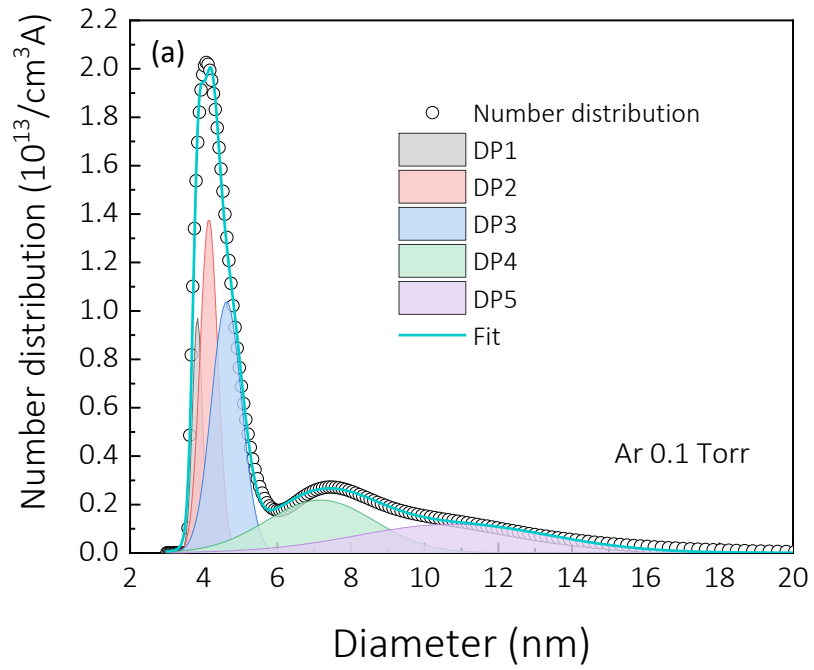

Fig. S4. The deconvolution of the number distribution of the treated sample by O₂ plasma. (a) 0.1 Torr, (b) 0.3 Torr, and (c) 0.6 Torr.

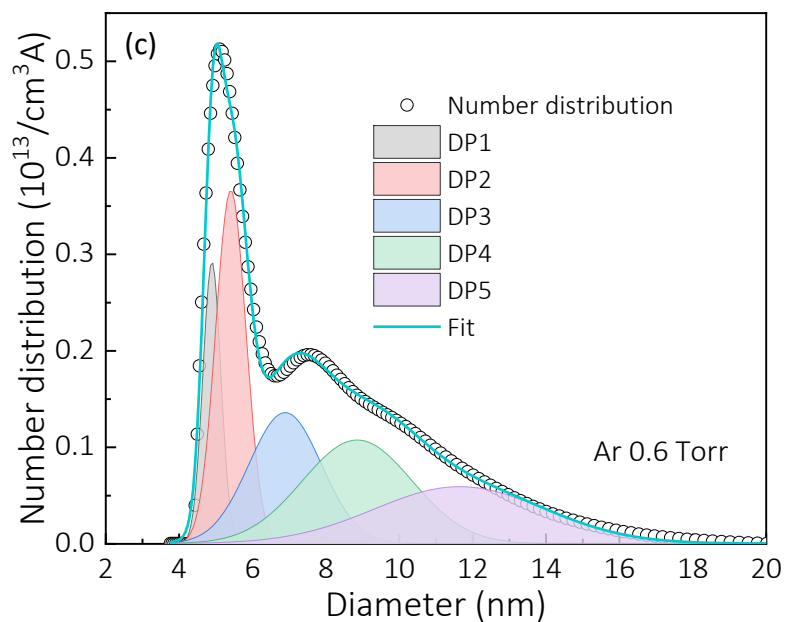

Fig. S5. The deconvolution of the number distribution of the treated sample by Ar plasma. (a) 0.1 Torr, (b) 0.3 Torr, and (c) Ar 0.6 Torr.
