Fig. S1. Photoelectron spectra of AlC$_{14}^-$ clusters recorded with 266 nm photons.
Fig. S2. The low-lying isomers of anionic Al₅C₅⁻ clusters. The relative energies in the up line are calculated at the CCSD(T)/aug-cc-pVTZ level without taking into account ZPEs. In the down line are calculated at CCSD(T)/aug-cc-pVTZ/B3LYP/aug-cc-pVTZ level. Yellow and red balls stand for the Al and C atoms, respectively.
Fig. S3. Electron localization functions analysis of isomer 5a.
Fig. S4. The out-of-plane ZZ tensor component of iso-chemical shielding surfaces at 1 Å above the isomer 5a plane [ICSS(1)zz], calculated at B3LYP/6-311+G(d, p) level.
