Supporting Information

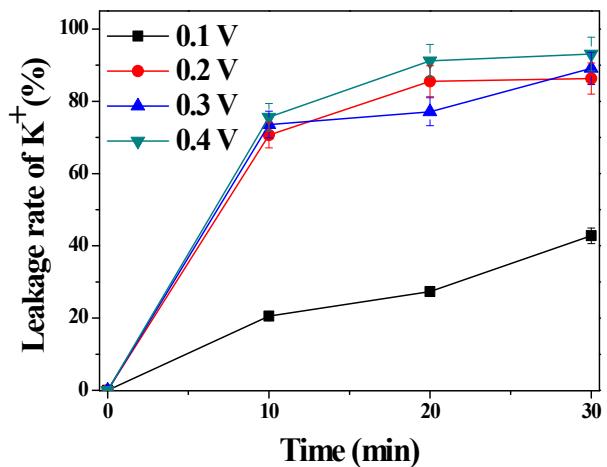

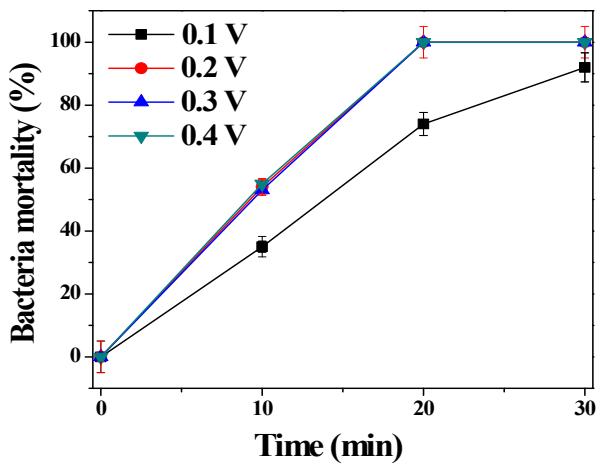

Fig. S1 (a) PEC inactivation activity of *A. baumanii* and (b) leakage of K⁺ ions from *A. baumanii* under different bias potential. Test conditions: 30 mL 10⁸ cfu/mL (0.5 MFC) *A. baumannii* (ATCC 19606), one Cu mesh (2.0 × 2.0 cm) coated with Cu₂O/TiO₂ as photoanode, Pt foil (2.0 × 2.0 cm) as counter electrode, one xenon lamp (300 W, $\lambda > 420$ nm), $T = 25$ °C.

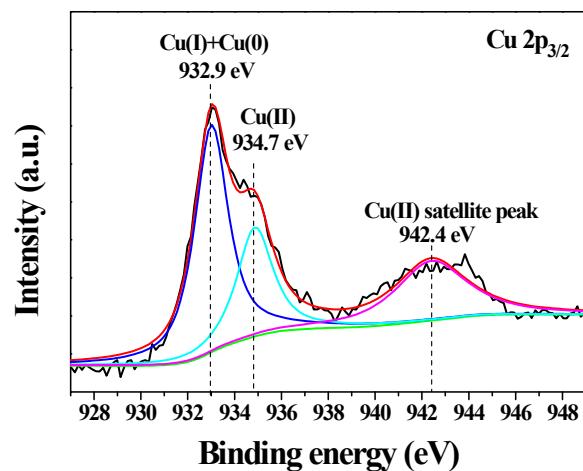

Fig. S2. XPS spectrum of Cu species in $\text{Cu}_2\text{O}/\text{TiO}_2@\text{Cu}$ meshes after PEC inactivation. Test conditions were given in Figure 3.

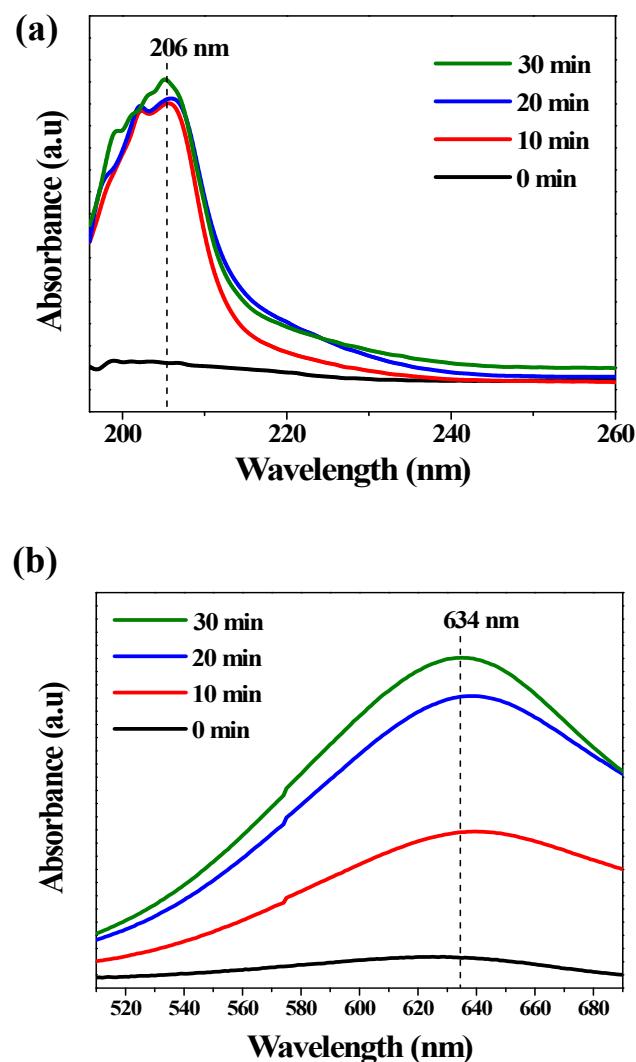

Fig. S3. Time resolved UV-vis absorption of (a) NO_3^- and (b) NH_4^+ ions in the bacterial solution during PEC inactivation process on $\text{Cu}_2\text{O}/\text{TiO}_2@\text{Cu}$ mesh. Test conditions were given in Figure 3.

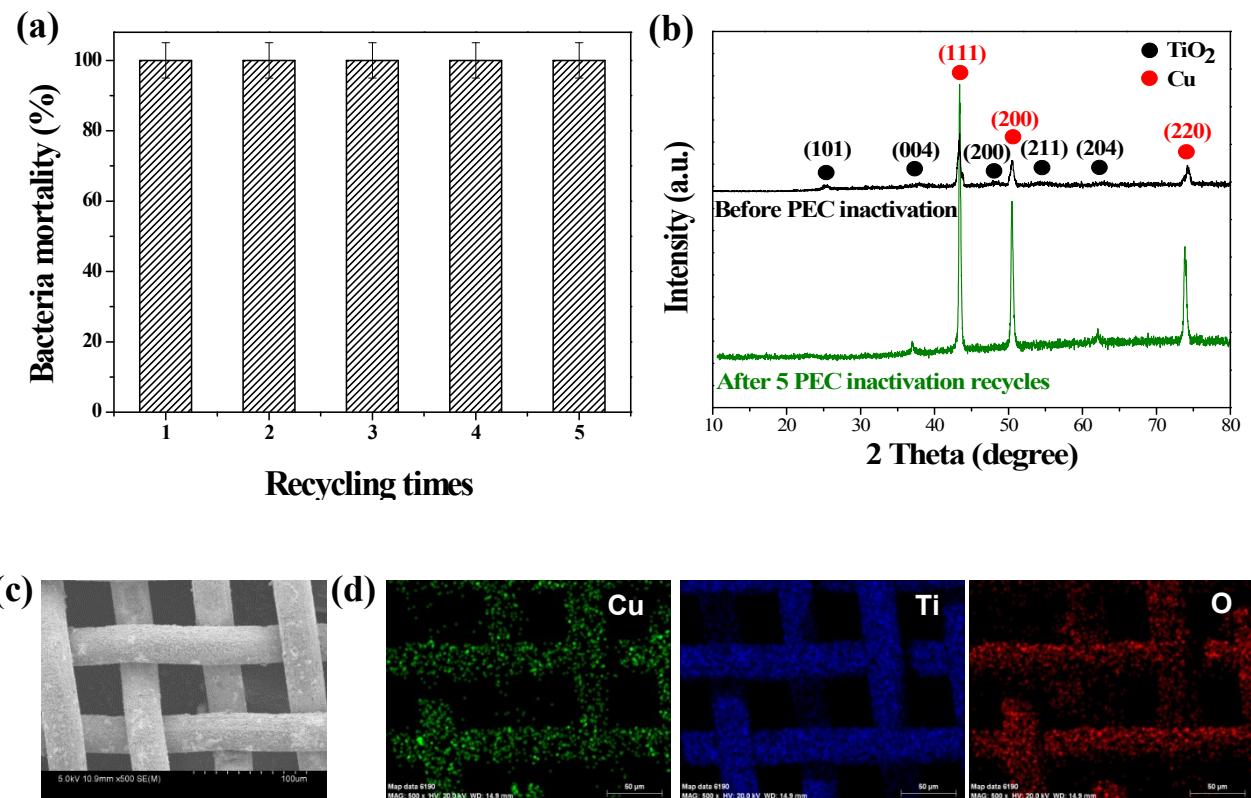

Fig. S4. (a) Recycling PEC inactivation activity of *A. baumannii* on Cu₂O/TiO₂@Cu mesh, (b) XRD patterns of Cu₂O/TiO₂@Cu mesh before and after the recycling test, (c) FESEM image of Cu₂O/TiO₂@Cu mesh, and (d) chemical mapping of Cu, Ti and O elements after the recycling test. Test conditions: 30 mL 10⁸ cfu/mL (0.5 MFC) *A. baumannii* (ATCC 19606), one Cu mesh (2.0 × 2.0 cm) coated with Cu₂O/TiO₂ as photoanode, Pt foil (2.0 × 2.0 cm) as counter electrode, one xenon lamp (300 W, $\lambda > 420$ nm), $t = 30$ min, $T = 25$ °C.
