

Supplementary figure caption

Supplementary figure 1. Confocal laser scanning microscopy images at a magnification of x 63 of the unheated control IMF (A), the unheated LF⁺ α-LA⁺ IMF (B) and the heated LF⁺ α-LA⁺ IMF at 80°C (C) at the end of the *in vitro* gastric digestion.

Proteins, in white, were colored with Fast Green.

Supplementary figure 2. Particle size distribution of pancreatin, as determined by laser light scattering.

The pancreatin solution was prepared to a same amount than that of the intestinal samples
