

SUPPLEMENTAL FIGURE 1. Effects of EPA and DHA on *Gpr120* gene expression levels in 3T3-L1 adipocytes. Fully differentiated 3T3-L1 adipocytes were treated with EPA and DHA (200 μ M) during 24 h, and *Gpr120* mRNA levels were determined. Data are expressed as mean \pm SEM of three independent experiments. * $p < 0.05$ vs. Control (vehicle-treated cells).
